AUTHOR'S PREFACE.

IT is the fate of those who toil at the lower employments of life, to be rather driven by the fear of evil, than attracted by the prospect of good; to be exposed to censure, without hope of praise; to be disgraced by miscarriage, or punished for neglect, where success would have been without applause, and diligence without reward.

Among these unhappy mortals is the writer of dictionaries; whom mankind have considered, not as the pupil, but the slave of science, the pioneer of literature, doomed only to remove rubbish and clear obstructions from the paths through which Learning and Genius press forward to conquest and glory, without bestowing a smile on the humble drudge that facilitates their progress. Every other author may aspire to praise; the lexicographer can only hope to escape reproach, and even this negative recompense has been yet granted to very few.

I have, notwithstanding this discouragement, attempted a dictionary of the *English* language, which, while it was employed in the cultivation of every species of literature, has itself been hitherto neglected; suffered to spread, under the direction of chance, into wild superabundance; resigned to the tyranny of time and fashion; and exposed to the corruptions of ignorance, and caprices of innovation.

When I took the first survey of my undertaking, I found our speech copious without order, and energetick without rules: wherever I turned my view, there was perplexity to be disentangled, and confusion to be regulated; choice was to be made out of boundless variety, without any established principle of selection; adulterations were to be detected, without a test of purity; and modes of expression to be rejected or received, without the examples of any writers of classical reputation or acknowledged authority.

Having therefore no assistance but from general grammar, I applied myself to the perusal of the writers; and noting whatever might be of use to ascertain or illustrate any word or phrase, accumulated in time the materials of a dictionary, which, by degrees, I reduced to

method, establishing to myself, in the progress of the work, such rules as analogy suggested to me; experience, which practice and observation increasing; and analogy, which, though in some words obscure, was evident in

In adjusting the ORTHOGRAPHY, which has been to this time unsettled and fortuitous, I found it necessary to distinguish those irregularities that are inherent in our tongue, and perhaps coeval with it, from others which the ignorance or negligence of later writers has produced. Every language has its anomalies, which, though inconvenient, and in themselves once unnecessary, must be tolerated among the imperfections of human things, and which require only to be registered, that they may not be increased, and ascertained, that they may not be confounded: but every language has likewise its improprieties and absurdities, which it is the duty of the lexicographer to correct or proscribe.

As language was at its beginning merely oral, all words of necessary or common use were spoken before they were written; and while they were unfixed by any visible signs, must have been spoken with great diversity, as we now observe those who cannot read to catch sounds imperfectly, and utter them negligently. When this wild and barbarous jargon was first reduced to an alphabet, every penman endeavoured to express, as he could, the sounds which he was accustomed to pronounce or to receive, and vitiated in writing such words as were already vitiated in speech. The powers of the letters, when they were applied to a new language, must have been vague and unsettled, and therefore different hands would exhibit the same sound by different combinations.

From this uncertain pronunciation arise in a great part the various dialects of the same country, which will always be observed to grow fewer, and less different, as books are multiplied; and from this arbitrary representation of sounds by letters proceeds that diversity of spelling observable in the *Saxon* remains, and I suppose in the first books of pronunciation which perplexes or destroys analogy, and produces anomalous formations, incorporated, can never be afterward dismissed or reformed.

Of this kind are the derivatives *length* from *long*, *strength* from *strong*, *darling* from *dear*, *breadth* from *broad*, from *dry*, *drought*, and from *high*, *height*, which *Milton*, in zeal for analogy writes *highth*; *Quid te exempta juvat spinis de pluribus una*; to change all would be too much, and to change one is nothing.

This uncertainty is most frequent in the vowels, which are so capriciously pronounced, so differently modified, by accident or affectation, not only in every province, but in every mouth, that to them, as is well known to etymologists, little regard is to be shewn in the deduction of one language from another.

Such defects are not errors in orthography, but spots of barbarity impressed so deep in the *English* language, that criticism can never wash them away: these, therefore, must be permitted to remain untouched; but many words have likewise been altered by accident, or depraved

ignorance, as the pronunciation of the vulgar has been weakly followed; and some still continue to be very badly written, as authours differ in their care or skill: of these it was proper to enquire into the orthography, which I have always considered as depending on their derivation, and have referred them to their original languages: thus I write *enchant*, *enchantment*, *enchanter*, after the *French*, and *incantation* after the *Latin*; thus *entire* is chosen rather than *intire*, because it passed to us not from the *Latin integer*, but from the *French entier*.

Of many words it is difficult to say whether they were immediately received from the *Latin* or the *French*, since at the time when we had dominions in *France*, we had *Latin* service in our churches: It is, however, my opinion, that the *French* generally supplied us; for we have few *Latin* words, among the terms of domestic use, which are not *French*; but many *French*, which are very remote from *Latin*.

Even in words of which the derivation is apparent, I have been often obliged to sacrifice uniformity to custom; thus I write, in compliance with a numberless majority, *convey* and *inveigh*, *deceit* and *receipt*, *fancy* and *phantom*; sometimes the derivative varies from the primitive, as *explain* and *explanation*, *repeat* and *repetition*.

Some combinations of letters having the same power are used indifferently without any discoverable reason of choice, as in *choak*, *choke*; *soap*, *sops*; *fewel*, *fuel*, and many others; which I have sometimes inserted twice, that those who search for them under either form, may not search in vain.

In examining the orthography of any doubtful word, the mode of spelling by which it is inserted in the series of the dictionary, is to be considered as that to which I give, perhaps not even rashly, the preference. I have left, in the examples, to every authour his own practice; that the reader may balance suffrages, and judge between us: but this question is determined by reputed or by real learning; some men, intent upon greater things, have thought little on sounds and derivations; some, knowing in the ancient tongues, have neglected those in which our words are commonly to be sought. Thus *Hammond* writes *ecibleness* for *feasibleness*, because I suppose he imagined it derived immediately from the *Latin*; and some words, such as *dependant*, *dependent*; *dependance*, *dependence*, vary their final syllable, as one or another language is present to the writer.

In this part of the work, where caprice has long wanted without controul, and vanity might praise by petty reformation, I have endeavoured to proceed with a scholar's reverence to antiquity, and a grammarian's regard to the genius of our tongue. I have attempted few innovations, and among those few, perhaps the greater part is from the modern to the ancient; and I hope I may be allowed to recommend to those, whose thoughts have been employed too anxiously on verbal singularities, not to disturb, upon narrow views, or the propriety, the orthography of their fathers. ✓ It has been asserted, that for the law is more important to be *known*, than to be *right*. Change, says *Hooker*, is not made without inconvenience, even from worse to better. There is in constancy and stability a general and

lasting advantage, which will always overbalance the slow improvements of gradual correction. Much less ought our written language to comply with the corruptions of oral utterance, or copy that which every variation of time or place makes different from itself, changes, which will again be changed, while imitation is employed in observing.

This recommendation of steadiness and uniformity does not proceed from an opinion, that particular combinations of letters have much influence on human happiness; or that truth may not be successfully taught by modes of spelling fanciful and erroneous: I am not yet so lost in lexicography, as to forget that *words are the daughters of earth, and that things are the sons of heaven*. Language is only the instrument of science, and words are but the signs of ideas: I wish, however, that the instrument might be less apt to decay, and that signs might be permanent, like the things which they denote.

In settling the orthography, I have not wholly neglected the pronunciation, which I have directed, by printing an accent upon the acute or elevated syllable. It will sometimes be found, that the accent is placed by the authour quoted, on a different syllable from that marked in the alphabetical series; it is then to be understood, that custom has varied, or that the authour has, in my opinion, pronounced wrong. Short directions are sometimes given where the sound of letters is irregular; and if they are sometimes omitted, defect in such minute observations will be more easily excused, than superfluity.

In the investigation both of the orthography and signification of words, their ETIMOL was necessarily to be considered, and they were therefore to be divided into primitives and derivatives. A primitive word, is that which can be traced no further to any *English* root; thus *circumspect*, *circumvent*, *circumstance*, *delude*, *concave*, and *complicate*, though compounded in the *Latin*, are to us primitives. Derivatives, are all those that can be referred to any word in *English* of greater simplicity.

The derivatives I have referred to their primitives, with an accuracy sometimes needless, who does not see that *remoteness* comes from *remote*, *lovely* from *love*, *concavity* from *concave*, and *demonstrative* from *demonstrate*? but this grammatical exuberance the scheme of my work did not allow me to repress. It is of great importance in examining the general fabrick of language, to trace one word from another, by noting the usual modes of derivation and inflection; and uniformity must be preserved in systematical works, though sometimes at the expence of particular propriety.

Among other derivatives I have been careful to insert and elucidate the anomalous forms of nouns and preterites of verbs, which in the *Teutonic* dialects are very frequent, and familiar to those who have always used them, interrupt and embarrass the learner in a new language.

The two languages from which our primitives have been derived are the *Roman* and *Teutonic*: under the *Roman* I comprehend the *French* and provincial tongues; and under

Teutonic range the *Saxon*, *German*, and all their kindred dialects. Most of our polysyllables *Roman* and our words of one syllable are very often *Teutonic*.

In the *Roman* original, it has perhaps sometimes happened that I have mentioned only the *Latin*, when the word was borrowed from the *French*; and considering myself as employed only in the illustration of my own language, I have not been very careful to observe whether the *Latin* word be pure or barbarous, or the *French* elegant or obsolete.

For the *Teutonic* etymologies I am commonly indebted to *Junius* and *Skinner*, the only names which I have forbore to quote when I copied their books; not that I might appropriate their labours or usurp their honours, but that I might spare a perpetual repetition by one general acknowledgment. Of these, whom I ought not to mention but with the reverence due to instructors and benefactors, *Junius* appears to have excelled in extent of learning, and *Skinner* in rectitude of understanding. *Junius* was accurately skilled in all the northern languages, *Skinner* probably examined the ancient and remoter dialects only by occasional inspection into dictionaries; but the learning of *Junius* is often of no other use than to show him a track by which he may deviate from his purpose, to which *Skinner* always presses forward by the shortest way. *Skinner* is often ignorant, but never ridiculous: *Junius* is always full of knowledge; but his variety distracts his judgment, and his learning is very frequently disgraced by his absurdities.

The votaries of the northern muses will not perhaps easily restrain their indignation, when they find the name of *Junius* thus degraded by a disadvantageous comparison; but whatever reverence is due to his diligence, or his attainments, it can be no criminal degree of censoriousness to charge that etymologist with want of judgment, who can seriously derive *dream* from *drama*, because *life is a drama*, and *a drama is a dream*; and who declares with a tone of defiance, that no man can fail to derive *moan* from *μόνος*, *monos*, who considers that grief naturally loves to be *alone*.*

That I may not appear to have spoken too irreverently of *Junius*, I have here subjoined a few specimens of his etymological extravagance.

BANISH, *religare, ex banno vel territorio exigere, in exilium agere*. G. *bannir*. It. *bandire, bandeggiare*. H. *bandir*. B. *bannen*. Ævi medi scriptores *bannire* dicebant. V. Sunt a *στωμυλεῖν* vel *στωμύλλειν*, nimia loquacitate alios offendere; quod impedit loquentes libentissimè garrere soleant; vel quod aliis nimii semper videantur, etiam paracissimè loquentes.

Our knowledge of the northern literature is so scanty, that of words undoubtedly *Teutonic* the original is not always to be found in any ancient language; and I have the *Dutch* or *German* substitutes, which I consider not as radical but parallel, not *state* but sisters of the *English*.

The words which are represented as thus related by descent or cognation, do not always agree in sense; for it is incident to words, as to their authours, to degenerate from their ancestors, and to change their manners when they change their country. It is sufficient, in etymological enquiries, if the senses of kindred words be found such as may easily pass into each other, or such as may both be referred to one general idea.

The etymology, so far as it is yet known, was easily found in the volumes where it is particularly and professedly delivered; and, by proper attention to the rules of derivation, the orthography was soon adjusted. But to COLLECT the WORDS of our language was a task of greater difficulty: the deficiency of dictionaries was immediately apparent; and when they were exhausted, what was yet wanting must be sought by fortuitous and unguided excursions into books, and gleaned as industry should find, or chance should offer it, in the boundless chaos of a living speech. My search, however, has been either skilful or lucky; for I have much augmented the vocabulary.

As my design was a dictionary, common or appellative, I have omitted all words which have relation to proper names; such as *Arian*, *Socinian*, *Calvinist*, *Benedictine*, *Mahometan*; but have retained those of a more general nature, as *Heathen*, *Pagan*.

Of the terms of art I have received such as could be found either in books of science or technical dictionaries; and have often inserted, from philosophical writers, words which are supported perhaps only by a single authority, and which being not admitted into general use stand yet as candidates or probationers; and must depend for their adoption on the suffrage of futurity.

The words which our authours have introduced by their knowledge of foreign languages, or ignorance of their own, by vanity or wantonness, by compliance with fashion, or lust of innovation, I have registred as they occurred, though commonly only to censure them, and warn others against the folly of naturalizing useless foreigners to the injury of the natives.

I have not rejected any by design, merely because they were unnecessary or exuberant, but have received those which by different writers have been differently formed, and *viscidit*, *viscous*, and *viscosity*.

Compounded or double words I have seldom noted, except when they obtain a different from that which the components have in their simple state. *woodman*, and *horsecourser*, require an explication; but of *thieflike* or *coach* was needed, because the primitives contain the meaning of the compounds.

Words arbitrarily formed by a constant and settled analogy, like diminutive adjectives in *ish*, as *greenish*, *bluish*, adverbs in *ly*, as *dully*, *openly*, substantives in *ness*, as *rileness*, *faultiness*, were less diligently sought, and many sometimes have been omitted, when I had no authority that invited me to insert them; not that they are not genuine and regular offsprings of *English* roots, but because their relation to the primitive being always the same, their signification cannot be mistaken.

The verbal nouns in *ing*, such as the *keeping* of the *castle*, the *leading* of the *army*, are always neglected, or placed only to illustrate the sense of the verb, except when they signify things as well as actions, and have therefore a plural number, as *dwelling*, *living*; or have an absolute and abstract signification, as *colouring*, *painting*, *learning*.

The participles are likewise omitted, unless, by signifying rather qualities than action, they take the nature of adjectives; as a *thinking* man, a man of prudence; a *pacing* horse, a horse that can pace: these I have ventured to call *participial adjectives*. But neither are these always inserted, because they are commonly to be understood, without any danger of mistake, by consulting the verb.

Obsolete words are admitted, when they are found in authours not obsolete, or when they have any force or beauty that may deserve revival.

As composition is one of the chief characteristics of a language, I have endeavoured to make some reparation for the universal negligence of my predecessors, by inserting great numbers of compounded words, as may be found under *after*, *fore*, *new*, *night*, *fair*, and many more. These, numerous as they are, might be multiplied, but that use and curiosity are here satisfied, and the frame of our language and modes of our combination amply discovered.

Of some forms of composition, such as that by which *re* is prefixed to note *repetition*, and *un* to signify *contrariety* or *privation*, all the examples cannot be accumulated, because the use of these particles, if not wholly arbitrary, is so little limited, that they are hourly affixed to new words as occasion requires, or is imagined to require them.

There is another kind of composition more frequent in our language than perhaps in any other, from which arises to foreigners the greatest difficulty. We modify the signification of many verbs by a particle subjoined; as to *come off*, to escape by a fetch; to *fall on*, to attack; to *fall off*, to apostatize; to *break off*, to stop abruptly; to *bear out*, to justify; to *fall in*, to comply; to *give over*, to cease; to *set off*, to embellish; to *set in*, to begin a continual tendency; to *set out*, to begin a course or journey; to *take off*, to copy; with innumerable others of the same kind, of which some appear wildly irregular, being so far distant from the simple words, that no sagacity will be able to trace the steps by which they have arrived at their present use. These I have noted with great care; and though I cannot flatter myself that this collection is complete, I believe I have so far assisted the students of our language, that this kind of phraseology will be no longer insuperable; and the combinations of

verbs and particles, by chance omitted, will be easily explained by comparison with those that may be found.

Many words yet stand supported only by the name of *Bailey, Ainsworth, Phillips*, or the contracted *Dict.* for *Dictionaries* subjoined: of these I am not always certain that they are read in any book but the works of lexicographers. Of such I have omitted many, because I had never read them; and many I have inserted, because they may perhaps exist, though they have escaped my notice: they are, however, to be yet considered as resting only upon the credit of former dictionaries. Others, which I considered as useful, or know to be proper, though I could not at present support them by authorities, I have suffered to stand upon my own attestation, claiming the same privilege with my predecessors of being sometimes credited without proof.

The words, thus selected and disposed, are grammatically considered: they are referred to the different parts of speech; traced, when they are irregularly inflected, through their various terminations; and illustrated by observations, not indeed of great or striking importance, separately considered, but necessary to the elucidation of our language, and hitherto neglected or forgotten by *English* grammarians.

That part of my work on which I expect malignity most frequently to fasten, is the *Explanation*; in which I cannot hope to satisfy those, who are perhaps not inclined to be pleased, since I have not always been able to satisfy myself. To interpret a language by itself is very difficult; many words cannot be explained by synonymes, because the idea signified by them has not more than one appellation; nor by paraphrase, because simple ideas cannot be described. When the nature of things is unknown, or the notion unsettled and indefinite, and various in various minds, the words by which such notions are conveyed, or such things denoted, will be ambiguous and perplexed. And such is the fate of hapless lexicography, that not only darkness, but light, impedes and distresses it; things may be not only too little, but too much known, to be happily illustrated. To explain, requires the use of terms less abstruse than that which is to be explained, and such terms cannot always be found; for as nothing can be proved but by supposing something intuitively known, and evident without proof, so nothing can be defined but by the use of words too plain to admit a definition.

Other words there are, of which the sense is too subtle and evanescent to be fixed in a paraphrase; such are all those which are by the grammarians termed *expletives*, and, in dead languages, are suffered to pass for empty sounds, of no other use than to fill a verse, or to modulate a period, but which are easily perceived in living tongues to have power and emphasis, though it be sometimes such as no other form of expression can convey.

My labour has likewise been much increased by a class of verbs too frequent in the *English* language, of which the signification is so loose and general, the use so vague and indeterminate, and the senses detorted so widely from the first idea, that it is hard to trace them through the maze of variation, to catch them on the brink of utter inanity, to circumscribe

by any limitations, or interpret them by any words of distinct and settled meaning: such as *bear, break, come, cast, full, get, give, do, put, set, go, run, make, take, turn, throw*. If of these the whole power is not accurately delivered, it must be remembered, that while our language is yet living, and variable by the caprice of every one that speaks it, these words are hourly shifting their relations, and can no more be ascertained in a dictionary, than a grove, in the agitation of a storm, can be accurately delineated from its picture in the water.

The particles are among all nations applied with so great latitude, that they are not easily reducible under any regular scheme of explication: this difficulty is not less, nor perhaps greater, in *English*, than in other languages. I have laboured them with diligence, I hope with success; such at least as can be expected in a task, which no man, however learned or sagacious, has yet been able to perform.

Some words there are which I cannot explain, because I do not understand them; these might have been omitted very often with little inconvenience, but I would not so far indulge my vanity as to decline this confession: for when *Tully* owns himself ignorant whether *lessus*, in the twelve tables, means a *funeral song*, or *mourning garment*; and *Aristotle* doubts whether *ὄψους*, in the *Iliad*, signifies a *mule*, or *muleteer*, I may freely, without shame, leave some obscurities to happier industry, or future information.

The rigour of interpretative lexicography requires that *the explanation, and the word explained, should be always reciprocal*; this I have always endeavoured, but could not always attain. Words are seldom exactly synonymous; a new term was not introduced, but because the former was thought inadequate: names, therefore, have often many ideas, but few ideas have many names. It was then necessary to use the proximate word, for the deficiency of single terms can very seldom be supplied by circumlocution; nor is the inconvenience great of such mutilated interpretations, because the sense may easily be collected entire from the examples.

✓ In every word of extensive use, it was requisite to mark the progress of its meaning, and show by what gradations of intermediate sense it has passed from its primitive to its remote and accidental signification; so that every foregoing explanation should tend to that which follows, and the series be regularly concatenated from the first notion to the last.

This is specious, but not always practicable; kindred senses may be so interwoven, that the perplexity cannot be disentangled, nor any reason be assigned why one should be ranged before the other. When the radical idea branches out into parallel ramifications, how can a consecutive series be formed of senses in their nature collateral? The shades of meaning sometimes imperceptibly into each other; so that though on one side they apparently differ, it is not possible to mark the point of contact. Ideas of the same race, though not exactly the same, are so little different, that no words can express the dissimilitude, though the mind perceives it, when they are exhibited together; and sometimes there is such a confusion of conceptions, that discernment is wearied, and distinction puzzled, and perplexity hurries to an end, by crowding together what she cannot separate.

These complaints of difficulty will, by those that have never considered words by popular use, be thought only the jargon of a man willing to magnify his labours, and procure veneration to his studies by involution and obscurity. But every art is obscure to those that have not learned it: this uncertainty of terms, and commixture of ideas, is well known to those who have joined philosophy with grammar; and if I have not expressed them very clearly, it must be remembered that I am speaking of that which words are insufficient to explain. ✓

The original sense of words is often driven out of use by their metaphorical acceptations, yet must be inserted for the sake of a regular origination. Thus I know not whether *ardour* is used for *material heat*, or whether *flagrant*, in *English*, ever signifies the same with *burning*; yet such are the primitive ideas of these words, which are therefore set first, though without examples, that the figurative senses may be commodiously deduced.

Such is the exuberance of signification which many words have obtained, that it was scarcely possible to collect all their senses; sometimes the meaning of derivatives must be sought in the mother term, and sometimes deficient explanations of the primitive may be supplied in the train of derivation. In any case of doubt or difficulty, it will be always proper to examine all the words of the same race; for some words are slightly passed over to avoid repetition, some admitted easier and clearer explanation than others, and all will be better understood, as they are considered in greater variety of structures and relations.

All the interpretations of words are not written with the same skill, or the same happiness: things equally easy in themselves, are not all equally easy to any single mind. Every writer of a long work commits errors, where there appears neither ambiguity to mislead, nor obscurity to confound him; and in a search like this, many felicities of expression will be casually overlooked, many convenient parallels will be forgotten, and many particulars will admit improvement from a mind utterly unequal to the whole performance.

But many seeming faults are to be imputed rather to the nature of the undertaking, than the negligence of the performer. Thus some explanations are unavoidably reciprocal or circular, as *hind*, the female of the *stag*; *stag*, the male of the *hind*: sometimes easier words are changed into harder, as *burial* into *sepulture* or *interment*, *drier* into *desiccative*, *dryness* into *siccidity* or *aridity*, *fit* into *paroxysm*; for the easiest word, whatever it be, can never be translated into one more easy. But easiness and difficulty are merely relative, and if the present prevalence of our language should invite foreigners to this dictionary, many will be assisted by those words which now seem only to increase or produce obscurity. For reason I have endeavoured frequently to join a *Teutonick* and *Roman* interpretation to *gladden*, or *exhilarate*, that every learner of *English* may be assisted.

✓ The solution of all difficulties, and the supply of all defects, must be examples, subjoined to the various senses of each word, and ranged according to their authors.

When first I collected these authorities, I was desirous that every quotation should be useful to some other end than the illustration of a word; I therefore extracted from philosophers principles of science; from historians remarkable facts; from chymists complete processes; from divines striking exhortations; and from poets beautiful descriptions. Such is design, while it is yet at a distance from execution. When the time called upon me to range this accumulation of elegance and wisdom into an alphabetical series, I soon discovered that the bulk of my volumes would fright away the student, and was forced to depart from my scheme of including all that was pleasing or useful in *English* literature, and reduce my transcripts very often to clusters of words, in which scarcely any meaning is retained; thus to the weariness of copying, I was condemned to add the vexation of expunging. Some passages I have yet spared, which may relieve the labour of verbal searches, and intersperse with verdure and flowers the dusty deserts of barren philology.

The examples, thus mutilated, are no longer to be considered as conveying the sentiments or doctrine of their authours; the word for the sake of which they are inserted, with all its appendant clauses, has been carefully preserved; but it may sometimes happen, by hasty detraction, that the general tendency of the sentence may be changed: the divine may desert his tenets, or the philosopher his system. ✓

Some of the examples have been taken from writers who were never mentioned as masters of elegance or models of stile; but words must be sought where they are used; and in what pages, eminent for purity, can terms of manufacture or agriculture be found? Many quotations serve no other purpose than that of proving the bare existence of words, and are therefore selected with less scrupulousness than those which are to teach their structures and relations.

My purpose was to admit no testimony of living authours, that I might not be misled by partiality, and that none of my contemporaries might have reason to complain; nor have I departed from this resolution, but when some performance of uncommon excellence excited my veneer, when my memory supplied me, from late books, with an example that was wanting, or when my heart, in the tenderness of friendship, solicited admission for a favourite name.

So far have I been from any care to grace my pages with modern decorations, that I have studiously endeavoured to collect examples and authorities from the writers before the restoration, whose works I regard as *the wells of English undefiled*, as the pure sources of genuine diction. Our language, for almost a century, has, by the concurrence of many causes, been gradually departing from its original *Teutonic* character, and deviating towards a *Gallick* style and phraseology, from which it ought to be our endeavour to recal it, by making our time our; yet our deficiencies, such as are readily adopted by the genius of our tongue, with our native idioms.

Of age has a time of rudeness antecedent to perfection, as well as of false heresies, I have been cautious lest my zeal for antiquity might drive me into

times too remote, and crowd my book with words now no longer understood. I have taken *Sidney's* work for the boundary, beyond which I make few excursions. From the authours which rose in the time of *Elizabeth*, a speech might be formed adequate to all the purposes of use and elegance. If the language of theology were extracted from *Hooker* and the translation of the Bible; the terms of natural knowledge from *Bacon*; the phrases of policy, war, and navigation from *Raleigh*; the dialect of poetry and fiction from *Spenser* and *Sidney*; and the diction of common life from *Shakespeare*, few ideas would be lost to mankind, for want of *English* words, in which they might be expressed.

It is not sufficient that a word is found, unless it be so combined as that its meaning is apparently determined by the tract and tenour of the sentence; such passages I have therefore chosen, and when it happened that any authour gave a definition of a term, or such an explanation as is equivalent to a definition, I have placed his authority as a supplement to my own, without regard to the chronological order, that is otherwise observed.

Some words, indeed, stand unsupported by any authority, but they are commonly derivative nouns or adverbs, formed from their primitives by regular and constant analogy, or names of things seldom occurring in books, or words of which I have reason to doubt the existence.

There is more danger of censure from the multiplicity than paucity of examples; authorities will sometimes seem to have been accumulated without necessity or use, and perhaps some will be found, which might, without loss, have been omitted. But a work of this kind is not hastily to be charged with superfluities: those quotations which to careless or unskilful perusers appear only to repeat the same sense, will often exhibit, to a more accurate examiner, diversities of signification, or, at least, afford different shades of the same meaning: one will shew the word applied to persons, another to things; one will express an ill, another a good, and a third a neutral sense; one will prove the expression genuine from an ancient authour; another will shew it elegant from a modern: a doubtful authority is corroborated by another of more credit; an ambiguous sentence is ascertained by a passage clear and determinate; the word, how often soever repeated, appears with new associates and in different combinations, and every quotation contributes something to the stability or enlargement of the language.

When words are used equivocally, I receive them in either sense; when they are metaphorical, I adopt them in their primitive acceptation.

I have sometimes, though rarely, yielded to the temptation of exhibiting a genealogy of sentiments, by shewing how one authour copied the thoughts and diction of another: such quotations are indeed little more than repetitions, which might justly be censured, did they gratify the mind, by affording a kind of intellectual history.

The various syntactical structures occurring in the examples have been given, and the licence or negligence with which many words have been hitherto used, has

cious and indeterminate; when the different combinations of the same word are exhibited together, the preference is readily given to propriety, and I have often endeavoured to direct the choice.

Thus have I laboured to settle the orthography, display the analogy, regulate the structures, and ascertain the signification of *English* words, to perform all the parts of a faithful lexicographer: but I have not always executed my own scheme, or satisfied my own expectations. The work, whatever proofs of diligence and attention it may exhibit, is yet capable of many improvements: the orthography which I recommend is still controvertible, the etymology which I adopt is uncertain, and perhaps frequently erroneous; the explanations are sometimes too much contracted, and sometimes too much diffused, the significations are distinguished rather with subtilty than skill, and the attention is harassed with unnecessary minuteness.

The examples are too often injudiciously truncated, and perhaps sometimes, I hope very rarely, alleged in a mistaken sense; for in making this collection I trusted more to memory, than, in a state of disquiet and embarrassment, memory can contain, and purposed to supply at the review what was left incomplete in the first transcription.

Many terms appropriated to particular occupations, though necessary and significant, are undoubtedly omitted; and of the words most studiously considered and exemplified, many senses have escaped observation.

Yet these failures, however frequent, may admit extenuation and apology. To have attempted much is always laudable, even when the enterprize is above the strength that undertakes it: To rest below his own aim is incident to every one whose fancy is active, and whose views are comprehensive; nor is any man satisfied with himself because he has done much, but because he can conceive little. When first I engaged in this work, I resolved to leave neither words nor things unexamined, and pleased myself with a prospect of the hours which I should revel away in feasts of literature, the obscure recesses of northern learning, which I should enter and ransack, the treasures with which I expected every search into those neglected mines to reward my labour, and the triumph with which I should display my acquisitions to mankind. When I had thus enquired into the original of words, I resolved to show likewise my attention to things; to pierce deep into every science, to enquire the nature of every substance of which I inserted the name, to limit every idea by a definition strictly logical, and exhibit every production of art or nature in an accurate description, that my book might be in place of all other dictionaries whether appellative or technical. But these were the dreams of a poet doomed at last to wake a lexicographer. I soon found that it is too late to look for instruments, when the work calls for execution, and that whatever abilities I had brought to my task, with those I must finally perform it. To deliberate whenever I doubted, to enquire ignorant, would have protracted the undertaking without end, and, perhaps, without improvement; for I did not find by my first experiments, that what I had not easily to be obtained: I saw that one enquiry only gave occasion to another, that to book, that to search was not always to find, and to find was not always

to be informed; and that thus to pursue perfection, was, like the first inhabitants of Arcadia, to chase the sun, which, when they had reached the hill where he seemed to rest, was still beheld at the same distance from them.

I then contracted my design, determining to confide in myself, and no longer to solicit auxiliaries, which produced more incumbrance than assistance: by this I obtained, at least one advantage, that I set limits to my work, which would in time be finished, though not completed.

Despondency has never so far prevailed as to depress me to negligence; some faults will at last appear to be the effects of anxious diligence and persevering activity. The nice and subtle ramifications of meaning were not easily avoided by a mind intent upon accuracy, and convinced of the necessity of disentangling combinations, and separating similitudes. Many of the distinctions which to common readers appear useless and idle, will be found real and important by men versed in the school philosophy, without which no dictionary ever shall be accurately compiled, or skilfully examined.

Some senses however there are, which, though not the same, are yet so nearly allied, that they are often confounded. Most men think indistinctly, and therefore cannot speak with exactness; and consequently some examples might be indifferently put to either signification: this uncertainty is not to be imputed to me, who do not form, but register the language; who do not teach men how they should think, but relate how they have hitherto expressed their thoughts.

The imperfect sense of some examples I lamented, but could not remedy, and hope they will be compensated by innumerable passages selected with propriety, and preserved with exactness; some shining with sparks of imagination, and some replete with treasures of wisdom.

The orthography and etymology, though imperfect, are not imperfect for want of care, but because care will not always be successful, and recollection or information come too late for use.

That many terms of art and manufacture are omitted, must be frankly acknowledged; but for this defect I may boldly allege that it was unavoidable: I could not visit caverns to learn the miner's language, nor take a voyage to perfect my skill in the dialect of navigation, nor visit the warehouses of merchants, and shops of artificers, to gain the names of wares, tools and operations, of which no mention is found in books; what favourable accident, or easy enquiry brought within my reach, has not been neglected; but it had been a hopeless labour to glean up words, by courting living information, and contesting with the sullen of one, and the roughness of another.

To furnish the academicians *della Crusca* with words of this kind, a book called *la Fiera*, or *the Fair*, was professedly written by *Buonaroti*; but

assistant, and therefore was content to want what they must have wanted likewise, had they not luckily been so supplied.

Nor are all words which are not found in the vocabulary to be lamented as omissions. Of the laborious and mercantile part of the people, the diction is in a great measure casual and mutable; many of their terms are formed for some temporary or local convenience, and though current at certain times and places, are in others utterly unknown. This fugitive cant, which is always in a state of increase or decay, cannot be regarded as any part of the durable materials of a language, and therefore must be suffered to perish with other things unworthy of preservation.

Care will sometimes betray to the appearance of negligence. He that is catching opportunities which seldom occur, will suffer those to pass by unregarded, which he expects hourly to return; he that is searching for rare and remote things, will neglect those that are obvious and familiar: thus many of the most common and cursory words have been inserted with little illustration, because in gathering the authorities, I forbore to copy those which I thought likely to occur whenever they were wanted. It is remarkable, that, in reviewing my collection, I found the word SEA unexemplified.

Thus it happens, that in things difficult there is danger from ignorance, and in things easy from confidence; the mind, afraid of greatness, and disdainful of littleness, hastily withdraws herself from painful searches, and passes with scornful rapidity over tasks not adequate to her powers, sometimes too secure for caution, and again too anxious for vigorous effort; sometimes idle in a plain path, and sometimes distracted in labyrinths, and dissipated by different intentions.

A large work is difficult because it is large, even though all its parts might singly be performed with facility; where there are many things to be done, each must be allowed its share of time and labour, in the proportion only which it bears to the whole; nor can it be expected, that the stones which form the dome of a temple, should be squared and polished like the diamond of a ring.

Of the event of this work, for which, having laboured it with so much application, I cannot but have some degree of parental fondness, it is natural to form conjectures. Those who have been persuaded to think well of my design, require that it should fix our language, and put a stop to those alterations which time and chance have hitherto been suffered to make in it without opposition. With this consequence I will confess that I flattered myself for a while; but now begin to fear that I have indulged expectation which neither age nor experience can justify. When we see men grow old and die at a certain time one after another, from century to century, we laugh at the elixir that promises to prolong life to a thousand years; and with equal justice may the lexicographer be derided, who being able to produce no example of a nation that has preserved their words and phraseology, shall imagine that his dictionary can embalm his language, and

secure it from corruption and decay, that it is in his power to change sublunary nature, or clear the world at once from folly, vanity, and affectation.

With this hope, however, academies have been instituted, to guard the avenues of their languages, to retain fugitives, and repulse intruders; but their vigilance and activity have hitherto been vain; sounds are too volatile and subtile for legal restraints; to enchain syllables, and to lash the wind, are equally the undertakings of pride, unwilling to measure its desires by its strength. The *French* language has visibly changed under the inspection of the academy; the stile of *Amelot's* translation of father *Paul* is observed by *Le Courayer* to be *un peu passé*; and no *Italian* will maintain, that the diction of any modern writer is not perceptibly different from that of *Boccace*, *Machiavel*, or *Caro*.

Total and sudden transformations of a language seldom happen; conquests and migrations are now very rare: but there are other causes of change, which, though slow in their operation, and invisible in their progress, are perhaps as much superiour to human resistance, as the revolutions of the sky, or intumescence of the tide. Commerce, however necessary, however lucrative, as it depraves the manners, corrupts the language; they that have frequent intercourse with strangers, to whom they endeavour to accommodate themselves, must in time learn a mingled dialect, like the jargon which serves the traffickers on the *Mediterranean* and *Indian* coasts. This will not always be confined to the exchange, the warehouse, or the port, but will be communicated by degrees to other ranks of the people, and be at last incorporated with the current speech.

There are likewise internal causes equally forcible. The language most likely to continue long without alteration, would be that of a nation raised a little, and but a little, above barbarity, secluded from strangers, and totally employed in procuring the conveniencies of life; either without books, or, like some of the *Mahometan* countries, with very few: men thus busied and unlearned, having only such words as common use requires, would perhaps long continue to express the same notions by the same signs. But no such constancy can be expected in a people polished by arts, and classed by subordination, where one part of the community is sustained and accommodated by the labour of the other. Those who have much leisure to think, will always be enlarging the stock of ideas, and every increase of knowledge, whether real or fancied, will produce new words, or combinations of words. When the mind is unchained from necessity, it will range after convenience; when it is left at large in the fields of speculation, it will shift opinions; as any custom is disused, the words that expressed it must perish with it; as any opinion grows popular, it will innovate speech in the same proportion as it alters practice.

As by the cultivation of various sciences, a language is amplified, it will be with words deflected from their original sense; the geometrician will talk zenith, or the excentrick virtue of a wild hero, and the physician of sanguine and phlegmatick delays. Copiousness of speech will give opportunities to each, by which some words will be preferred, and others degraded; vicissitudes

enforce the use of new, or extend the signification of known terms. The tropes of poetry will make hourly encroachments, and the metaphorical will become the current sense: pronunciation will be varied by levity or ignorance, and the pen must at length comply with the tongue; illiterate writers will at one time or other, by publick infatuation, rise into renown, who, not knowing the original import of words, will use them with colloquial licentiousness, confound distinction, and forget propriety. As politeness increases, some expressions will be considered as too gross and vulgar for the delicate, others as too formal and ceremonious for the gay and airy; new phrases are therefore adopted, which must, for the same reasons, be in time dismissed. *Swift*, in his petty treatise on the *English* language, allows that new words must sometimes be introduced, but proposes that none should be suffered to become obsolete. But what makes a word obsolete, more than general agreement to forbear it? and how shall it be continued, when it conveys an offensive idea, or recalled again into the mouths of mankind, when it has once by disuse become unfamiliar, and by unfamiliarity displeasing?

There is another cause of alteration more prevalent than any other, which yet in the present state of the world cannot be obviated. A mixture of two languages will produce a third distinct from both, and they will always be mixed, where the chief part of education, and the most conspicuous accomplishment, is skill in ancient or in foreign tongues. He that has long cultivated another language, will find its words and combinations croud upon his memory; and haste and negligence, refinement and affectation, will obtrude borrowed terms and exotick expressions.

The great pest of speech is frequency of translation. No book was ever turned from one language into another, without imparting something of its native idiom; this is the most mischievous and comprehensive innovation; single words may enter by thousands, and the fabrick of the tongue continue the same, but new phraseology changes much at once; it alters not the single stones of the building, but the order of the columns. If an academy should be established for the cultivation of our stile, which I, who can never wish to see dependance multiplied, hope the spirit of *English* liberty will hinder or destroy, let them, instead of compiling grammars and dictionaries, endeavour, with all their influence, to stop the licence of translatours, whose idleness and ignorance, if it be suffered to proceed, will reduce us to babble a dialect of *France*.

If the changes that we fear be thus irresistible, what remains but to acquiesce with silence, as in the other insurmountable distresses of humanity? it remains that we retard what we cannot cure, that we palliate what we cannot cure. Life may be lengthened by care, though death is ultimately defeated: tongues, like governments, have a natural tendency to degenerate. If we have long preserved our constitution, let us make some struggles for our language.

Of giving longevity to that which its own nature forbids to be immortal, I have, in this book, the labour of years, to the honour of my country, that we may no longer be indebted to the labours of philology to the nations of the continent. The chief glory of every people is its authours; whether I shall add any thing by my own writings to the reputation

of *English* literature, must be left to time: much of my life has been lost under the pressures of disease; much has been trifled away; and much has always been spent in provision for the day that was passing over me; but I shall not think my employment useless or ignoble, if by my assistance foreign nations, and distant ages, gain access to the propagators of knowledge, and understand the teachers of truth; if my labours afford light to the repositories of science, and add celebrity to *Bacon*, to *Hooker*, to *Milton*, and to *Boyle*.

When I am animated by this wish, I look with pleasure on my book, however defective, and deliver it to the world with the spirit of a man that has endeavoured well. That it will immediately become popular I have not promised to myself: a few wild blunders, and risible absurdities, from which no work of such multiplicity was ever free, may for a time furnish folly with laughter, and harden ignorance in contempt; but useful diligence will at last prevail, and there never can be wanting some who distinguish desert; who will consider that no dictionary of a living tongue ever can be perfect, since while it is hastening to publication, some words are budding, and some falling away; that a whole life cannot be spent upon syntax and etymology, and that even a whole life would not be sufficient; that he, whose design includes whatever language can express, must often speak of what he does not understand; that a writer will sometimes be hurried by eagerness to the end, and sometimes faint with weariness under a task, which *Scaliger* compares to the labours of the anvil and the mine; that what is obvious is not always known, and what is known is not always present; that sudden fits of inadvertency will surprise vigilance, slight avocations will seduce attention, and casual eclipses of the mind will darken learning; and that the writer shall often in vain trace his memory at the moment of need, for that which yesterday he knew with intuitive readiness, and which will come uncalled into his thoughts to-morrow.

In this work, when it shall be found that much is omitted, let it not be forgotten that much likewise is performed; and though no book was ever spared out of tenderness to the authour, and the world is little solicitous to know whence proceeded the faults of that which it condemns; yet it may gratify curiosity to inform it, that the *English Dictionary* was written with little assistance of the learned, and without any patronage of the great; not in the soft obscurities of retirement, or under the shelter of academick bowers, but amidst inconvenience and distraction, in sickness and in sorrow: and it may repress the triumph of malignant criticism to observe, that if our language is not here fully displayed, I have only failed in an attempt which no human powers have hitherto completed. If the lexicons of ancient tongues, now immutably fixed, and comprised in a few volumes, be yet, after the toil of successive ages, inadequate and delusive; if the aggregated knowledge, and co-operating diligence of *Italian* academicians, did not secure them from the censure of *Beni*; if the embroils of *France*, when fifty years had been spent upon their work, were obliged to give their second edition another form, I may surely be contented with the praise of perfection, which, if I could obtain, in this gloom of solitude, what can it do for me? I have protracted my work till most of those whom I wished to please are in the grave, and success and miscarriage are empty sounds: I therefore dismiss my work with tranquillity, having little to fear or hope from censure or from praise.

THE HISTORY OF THE ENGLISH LANGUAGE BY DR. JOHNSON.

THOUGH the *Britains* and *Welsh* were the first possessors of this island, whose names are recorded, and are therefore in civil history always considered as the predecessors of the present inhabitants; yet the deduction of the English language, from the earliest times of which we have any knowledge to its present state, requires no mention of them: for we have so few words which can, with any probability, be referred to *British* roots, that we justly regard the *Saxons* and *Welsh* as nations totally distinct. It has been conjectured, that when the *Saxons* seized this country, they suffered the *Britains* to live among them in a state of vassalage, employed in the culture of the ground, and other laborious and ignoble services. But it is scarcely possible that a nation, however depressed, should have been mixed in considerable numbers with the *Saxons* without some communication of their tongue, and therefore it may, with great reason, be imagined, that those who were not sheltered in the mountains perished by the sword. (NOTE A.)

The whole fabrick and scheme of the *English* language is *Gothick* or *Teutonical*: it is a dialect of that tongue, which prevails over all the northern countries of Europe, except those where the *Sclavonian* is spoken. Of these languages, Dr. *Hicks* has thus established the genealogy:—

The *Gothick*, the only monument remaining is a copy of the gospels somewhat mutilated, which, as it is written with characters adorned, is called the *silver book*. It is now preserved at *Uppsala* and has been twice published. Whether the diction of this venerable manuscript be purely *Gothick* is doubted; it seems, however, to exhibit the most ancient dialect now to be found of the *Saxon*, which is the original of the present *English*, was either derived from it, or from some common parent. (NOTE C.)

When the *Saxon* language, when, about the year 450, they first entered *Britain*, they seem to have been a people without learning, and very probably without an alphabet; therefore, having been always cursory and extemporaneous, must have been artless

and unconnected, without any modes of transition or involution of clauses; which abruptness and incon-
 nection may be observed even in their later writings. This barbarity may be supposed to have continued
 during their wars with the *Britains*, which for a time left them no leisure for softer studies; nor is there
 any reason for supposing it abated, till the year 570, when *Augustine* came from *Rome* to convert them
 to Christianity. The Christian religion always implies or produces a certain degree of civility and
 learning; they then became by degrees acquainted with the *Roman* language, and so gained, from time to
 time, some knowledge and elegance, till in three centuries they had formed a language capable of express-
 ing all the sentiments of a civilised people, as appears by king *Alfred's* paraphrase or imitation of *Boethius*,
 and his short preface, which I have selected as the first specimen of ancient *English*. (NOTE D.)

This may perhaps be considered as a specimen of the *Saxon* in its highest state of purity
 scarcely any words borrowed from the *Roman* dialects.

Of the following version of the gospels the age is not certainly known, but it lies
 between the time of *Alfred* and that of the *Norman* conquest, and therefore may be
 here.

¹ For a translation, see p. lxxvi.

Translations seldom afford just specimens of a language, and least of all those in which a scrupulous and verbal interpretation is endeavoured, because they retain the phraseology and structure of the original tongue; yet they have often this convenience, that the same book, being translated in different ages, affords opportunity of marking the gradations of change, and bringing one age into comparison with another. For this purpose I have placed the *Saxon* version and that of *Wickliffe*, written about the year 1380, in opposite columns; because the convenience of easy collation seems greater than that of regular chronology.

Of the *Saxon* poetry some specimen is necessary, though our ignorance of the laws of their metre and the quantities of their syllables, which it would be very difficult, perhaps impossible, to recover, excludes us from that pleasure which the old bards undoubtedly gave to their contemporaries.

The first poetry of the *Saxons* was without rhyme, and consequently must have depended upon the quantity of their syllables; but they began in time to imitate their neighbours, and close their verses with correspondent sounds. (NOTE E.)

The two passages which I have selected, contain apparently the rudiments of our present lyric measures, and the writers may be justly considered as the genuine ancestors of the *English* poets.

About the year 1150, the *Saxon* began to take a form in which the beginning of the present *English* may be plainly discovered; this change seems not to have been the effect of the *Norman* conquest, for very few *French* words are found to have been introduced in the first hundred years after it; the language must therefore have been altered by causes like those which, notwithstanding the care of writers and societies instituted to obviate them, are even now daily making innovations in every living language. I have exhibited a specimen of the language of this age from the year 1135 to 1140 of the *Saxon* chronicle, of which the latter part was apparently written near the time to which it relates. Nearly about this time, the following pieces of poetry seem to have been written, of which I have inserted only short fragments; the first is a rude attempt at the present measure of eight syllables, and the second is a natural introduction to *Robert of Gloucester*, being composed in the same measure, which, however rude and barbarous it may seem, taught the way to the *Alexandrines* of the *French* poetry.

In these fragments, the adulteration of the *Saxon* tongue, by a mixture of the *Norman*, becomes apparent; yet it is not so much changed by the admixture of new words, which might be imputed to commerce with the continent, as by changes of its own forms and terminations; for which no reason can be given.

Hitherto the language used in this island, however different in successive time, may be called *Saxon*; nor can it be expected, from the nature of things gradually changing, that any time can be assigned, when the *Saxon* may be said to cease, and the *English* to commence. *Robert of Gloucester*, however, who is placed by the critics in the thirteenth century, seems to have used a kind of intermediate diction, neither *Saxon*. nor *English*; in his work therefore we see the transition exhibited, and as he is the first of our writers in rhyme, of whom any large work remains, a more extensive quotation is extracted. He writes apparently in the same measure with the foregoing authour of *St. Margarite*, which, polished into greater exactness, appeared to our ancestors so suitable to the genius of the *English* language, that it was continued in use almost to the middle of the seventeenth century.

Sir *John Mandeville* wrote, as he himself informs us, in the fourteenth century, and his work, which comprising a relation of many different particulars, consequently required the use of many words and phrases, may be properly specified in this place. Of the following quotations, I have chosen the first, because it shows, in some measure, the state of *European* science as well as of the *English* tongue; and the second, because it is valuable for the force of thought and beauty of expression.

I.

In that lond, ne in many othere begonde that, no man may see the sterre transmontane, that is clept the sterre of the see, that is unmevable, and that is toward the Northe, that we clepen the lode sterre. But men seen another sterre, the contrarie to him, that is toward the South, that is clept Antartyk. And right as the schip men taken here avys here, and governe hem be the lode sterre, right so don schip men begonde the parties, be the sterre of the Southe, the which sterre apperethe not to us. And this sterre, that is toward the Northe, that we clepen the lode sterre, ne apperethe not to hem. For whiche cause, men may wel perceyve, that the lond and the see ben of rownde schapp and forme. For the partie of the firmament schewethe in o contree, that schewethe not in another contree. And men may well preven be experience and sotyle compassement of wytt, that gif a man fond passages be schippes, that wolde go to serchen the world, men myghte go be schippe alle aboute the world, and aboven and benethen. The whiche thing I prove thus, afre that I have seyn. For I have been toward the parties of Braban, and beholden the Astrolabre, that the sterre that is clept the transmontayne, is 53 degrees highe. And more forthere in Almayne and Bewme, it hathe 58 degrees. And more forthe toward the parties septentrioneles, it is 62 degrees of heghte, and certyn mynutes. For I my self have mesured it by the Astrolabre. Now schulle ȳe knowe, that agen the Transmontayne, is the tother sterre, that is clept Antartyke; as I have seyde before. And tho 2 sterres ne meeven nevere. And be hem turneth alle the firmament, righte as dothe a wheel, that turneth be his axille tree: so that the sterres beren the firmament in 2 egalle parties; so that it hathe als mochel aboven, as it hathe benethen. Afre this, I have gon toward the parties meridionales, that is toward the Southe, and I have founden, that in Lybye, men seen first the sterre Antartyk. And so fer I have gon more in the contrees, that I have founde that sterre more highe; so that toward the highe Lybye, it is 18 degrees of heghte, and certeyn minutes (of the whiche, 60 minutes maken a degree) afre goyng be see and be londe, toward this contree, of that I have spoke, and to other yles and londes begonde that contree, I have founden the sterre Antartyk of 33 degrees of heghte, and mo mynutes. And gif I hadde had companye and schippyng, for to go more begonde, I trowe wel in certyn, that wee scholde have seen alle the roundnesse of the firmament alle aboute. For as I have seyde ȳou be for, the half of the firmament is betwene tho 2 sterres: the whiche halfondelle I have seyn. And of the tother halfondelle, I have seyn toward the Northe, undre the Transmontane 62 degrees and 10 mynutes; and toward the partie meridionale, I have seen undre the Antartyk 33 degrees and 16 mynutes: and thanne the halfondelle of the firmament in alle, ne holdethe not but 180 degrees. And of tho 180, I have seen 62 on that o part, and 33 on that other part, that ben 95 degrees, and nyghe the halfondelle of a degree; and so there ne faylethe but that I have seen alle the firmament, saf 84 degrees and the halfondelle of a degree; and that is not the fourthe part of the firmament. For the 4 partie of the roundnesse of the firmament holt 90 degrees: so there fayleth but 5 degrees and an half, of the 4the partie. And

also I have seen the 3 parties of alle the roundnesse of the firmament, and more git 5 degrees and an half. Be the whiche I seye you certeynly, that men may envirowne all the erthe of alle the world, as wel undre as aboven, and turnen agen to his contree, that hadde companye and schippyng and conduyt: and alle weyes he scholde fynde men, londes, and yles, als wel as in this contree. For zee wyten wel, that thei that ben toward the Antartyk, thei ben streghte, feet agen feet of hem, that dwellen under the transmontane; als wel as wee and thei that dwellyn under us, ben feet agenst feet. For alle the parties of see and of lond han here appositees, habitables or trepassables, and thei of this half and beyond half. And wytethe wel, that afre that, that I may parceyve and comprehende, the londes of Prestre John, emperour of Ynde, ben undre us. For in goynge from Scotlond or from Englond toward Jerusalem, men gon upward always. For oure lond is in the lower partie of the erthe, toward the West: and the lond of Prestre John is the lower partie of the erthe, toward the Est: and thei han there the day, whan wee have the nyghte, and also highe to the contrarie, thei han the nyghte, whan wee han the day. For the erthe and the see ben of round forme and schapp, as I have seyde before. And that that men gon upward to o cost, men gon downward to another cost. Also zee have herd me seye, that Jerusalem is in the myddes of the world; and that may men preven and schewen there, be a spere, that is pighte in to the erthe, upon the hour of mydday, whan it is equenoxium, that scheweth no schadwe on no syde. And that it scholde ben in the myddes of the world, David wytnessethe it in the Psautre, where he sythe, Deus operatus est salutem in medio terre. Thanne thei that parten fro the parties of the West, for to go toward Jerusalem, als many iorneyes as thei gon upward for to go thidre, in als many iorneyes may thei gon fro Jerusalem, unto other confynyes of the superficialite of the erthe beyonde. And whan men gon beyonde the iorneyes; toward Ynde and to the foreyn yles, alle is envyryng the roundnesse of the erthe and of the see, undre oure contrees on this half. And therefore hathe it befallen many tymes of o thing, that I have herd cownted, whan I was yong; how a worthi man departed sometye from oure contrees, for to go serche the world. And so he passed Ynde, and the yles beyonde Ynde, where ben mo than 5000 yles: and so longe he wente to see and lond, and so envyround the world be many seysons, that he fond an yle, where he herd speke his owne langage, callynge on oxen in the plowghe, suche wordes as men speken to bestes in his owne contree: whereof he hadde gret mervayle: for he knewe not how it myghte be. But I seye, that he had gon so longe, be londe and be see, that he had envyround alle the erthe, that he was comen agen envyroundyng, that is to seye, goynge aboute, unto his owne marches, gif he wolde have passed forthe, til he had founden his contree and his owne knouliche. But he turned agen from thens, from whens he was come fro; and so he loste moche peynefulle labour, as him self seyde, a gret while afre, that he was comen hom. For it befelle afre, that he wente in to Norweye; and there tempest of the see toke him; and he arrived in an yle; and whan he was in that yle, he knew wel, that it was the yle, where he had herd speke his owne langage before, and the callynge of the oxen at the plowghe: and that was possible thinge. But how it semethe to symple men unlearned, that men ne mowe not go undre the erthe, and also that men scholde falle toward the hevене, from undre! But that may not be, upon lesse, than wee mowe falle toward hevене, fro the erthe, where wee ben. For fro what partie of the erthe, that men duelle, outhen aboven or benethen, it semethe alweyes to hem that duellen, that thei gon more righte than any other folk. And righte as it semethe to us, that thei ben undre us, righte so it semethe hem, that wee ben undre hem. For gif a man myghte falle fro the erthe unto the firmament; be grettere resoun, the erthe and the see, that ben so grete and so hevy, scholde fallen to the firmament: but that may not be: and therefore seith oure Lord God, Non timeas me, qui suspendi terram ex nichilo? And alle be it, that it be possible thing, that men may so envyroune alle the world, natheless of a 1000 persones, on ne myghte not happen to returnen in to his contree. For, for the gretnesse of the erthe and of the see, men may go be a 1000 and a 1000 other weyes, that no man cowde redye him perfetely toward the parties that he cam fro, but gif it were be aventure and happ, or be the grace of God. For the erthe is fulle large and fulle gret, and holt in roundnesse and aboute envyroun, be aboven and be benethen 20425 myles, afre the opynyoun of the olde wise astronomeres. And here seyenges I repreve noughte. But afre my lytylle wyt, it semethe me, savynge here reverence, that it is more. And for to have bettere understandynge, I seye thus, be ther ymagyned a figure, that hathe a gret compass; and aboute the poynt of the gret compass, that is clept the centre, be made another litille compass: than afre, be the gret compass devised be lines in manye parties; and that alle the lynes meeten at the centre; so that in as many parties, as the gret compass schal be departed, in als manye, schalle be departed the litille, that is aboute the centre, alle be it, that the spaces ben lesse. Now thanne, be the gret compass represented for the firmament, and the litille compass represented for the erthe. Now thanne the firmament is devysed, be astronomeres, in 12 signes; and every signe is devysed in 30 degrees, that is 360 degrees, that the firmament hathe aboven. Also, be the erthe devysed in als many parties, as the firmament; and lat every partye answer to a degree of the firmament: and wytethe it wel, that afre the auctoures of astronomye, 700 furlonges of erthe answeren to a degree of the firmament; and tho ben 87 miles and 4 furlonges. Now be that here multiplyed be 360 sithes; and than thei ben 31500 myles, every of 8 furlonges, afre myles of oure contree. So moche hathe the erthe in roundnesse, and of heghte as of opynyoun and myn undirstondynge. And zee schulle undirstonde, that afre the opynyoun of olde wise astronomeres, oure contree ne Ireland ne Wales ne Scotland ne Norweye ne the other yles costynge to the superficialite cownted aboven the erthe; as it schewethe be alle the bokes of astronomye. For

the superficialtee of the erthe is departed in 7 parties, for the 7 planetes: and tho parties ben clept clymates. And oure parties be not of the 7 clymates: for thei ben descendynge toward the West. And also these yles of Ynde, which beth evene agenst us, beth noght reckned in the climates: for thei ben agenst us, that ben in the lowe contree. And the 7 clymates stretchen hem envyrourynge the world.

II.

And I John Maundeville knyghte aboveseyd, (alle thoughe I bē unworthi) that departed from oure contrees and passed the see, the zeer of grace 1322, that have passed manye londes and manye yles and contrees, and cerched manye fulle straunge places, and have ben in many a fulle gode honourable companye, and at many a faire dede of armes, (alle be it that I dide none myself, for myn unable insuffisance) now I am comen hom (mawgree my self) to reste: for gowtes, artetykes, that me distreyne, tho diffynen the ende of my labour, agenst my wille (God knowethe.) And thus takynge solace in my wrecched reste, recordynge the tyme passed, I have fulfilled theise thinges and putte hem wryten in this boke, as it wolde come in to my mynde, the zeer of grace 1356 in the 34 zeer that I departede from oure contrees. Wherefore I preye to alle the rederes and hereres of this boke, gif it plesse hem, that thei wolde preyn to God for me: and I schalle preye for hem. And alle tho that seyn for me a Pater noster, with an Ave Maria, that God forgyve me my synnes, I make hem partneres and graunte hem part of alle the gode pilgrimages and of alle the gode dedes, that I have don, gif ony be to his plesance: and noghte only of tho, but of alle that evere I schalle do unto my lyfes ende. And I beseeche Almyghty God, fro whōm alle godenesse and grace comethe fro, that he vouchesaf, of his excellent mercy and habundant grace, to fulle fylle hire soules with inspiracioun of the Holy Gost, in makynge defence of alle hire gostly enemyes here in erthe, to hire salvacioun, bothe of body and soule; to worschipe and thankynge of him, that is three and on, with outen begynnynge and withouten endynge; that is withouten qualitee, good, and withouten quantytee, gret; that in alle places is present, and alle thinges contenynge: the whiche that no goodnesse may amende, ne non ewelle empyre; that in perfeyte trynytee lyveth and regneth God, be alle worldes and be alle tymes Amen, Amen, Amen.

The first of our authours, who can be properly said to have written *English*, was Sir John Gower, who, in his *Confession of a Lover*, calls *Chaucer* his disciple, and may therefore be considered as the father of our poetry.

Nowe for to speke of the commune,
It is to drede of that fortune,
Which hath befallē in sondrye londes:
But ofte for defaute of bondes
All sodeinly, er it be wist,
A tunne, whan his lie arist
Tobreketh, and renneth all aboute,
Whiche els shulde nought gone out.
And eke full ofte a littell skare
Vpon a banke, er men be ware,
Let in the streame, whiche with gret peine,
If any man it shall restraine.
Where lawe failleth, errour groweth.
He is not wise, who that ne troweth.
For it hath proued oft er this.

And thus the common clamour is
In euery londe, where people dwelleth:
And eche in his complainte telleth,
How that the worlde is miswent,
And thervpon his argument
Yeueth euery man in sondrie wise:
But what man wolde him selfe auise
His conscience, and nought misuse,
He maie well at the first excuse
His god, whiche euer stant in one,
In him there is defaute none
So must it stande vpon vs selue,
Nought only vpon ten ne twelue,
But plenarly vpon vs all:
For man is cause of that shall fall.

The history of our language is now brought to the point at which the history of our poetry is generally supposed to commence, the time of the illustrious *Geoffry Chaucer*, who may perhaps, with great justice, be stiled the first of our versifiers who wrote poetically. He does not however appear to have deserved all the praise which he has received, or all the censure that he has suffered. *Dryden*, who mistakes genius for learning, and, in confidence of his abilities, ventured to write of what he had not examined, ascribes to *Chaucer* the first refinement of our numbers, the first production of easy and natural rhymes, and the improvement of our language, by words borrowed from the more polished languages of the continent. *Skinner* contrarily blames him in harsh terms for having vitiated his native speech by whole cartloads of foreign words. But he that reads the works of *Gower* will find smooth numbers and easy rhymes, of which *Chaucer* is supposed to have been the inventor, and the *French* words, whether good or bad, of which *Chaucer* is charged as the importer. Some innovations he might like others, in the infancy of our poetry, which the paucity of books does allow us to do.

cular exactness; but the works of *Gower* and *Lydgate* sufficiently evince, that his diction was in general like that of his contemporaries: and some improvements he undoubtedly made by the various dispositions of his rhymes, and by the mixture of different numbers, in which he seems to have been happy and judicious. I have selected several specimens both of his prose and verse; and among them, part of his translation of *Boetius* to which another version, made in the time of queen *Mary*, is opposed. It would be improper to quote very sparingly an authour of so much reputation, or to make very large extracts from a book so generally known.

A.
I.CHAUCER.¹

Alas! I wepyng am constrained to begin verse of sorowfull matter, that whilom in florishyng studie made delitable dities. For lo @rendyng muses of Poetes enditen to me thinges to be writen, and drerie teres. At laste no drede ne might overcame tho muses, that thei ne werren fellowes, and foloweden my waie, that is to saie, when I was exiled, thei that wereff of my youth whilom welfull and grene, comforten now sorowfull wierdes of me olde man: for elde unwereffly upon me, hasted by the harmes that I commaunded his age to be in me. Heres here are certimeliche upon my hed: and the slacke skinne trembleth of mine emptied bodie. Thilke deth of men is welefull, that he ne cometh not in yeres that be swete, but cometh to wretches often icleped: Alas, alas! with how defe an ere deth cruell turneth awaie fro wretches, and naieth for to close wepyng eyen. While fortune unfaithfull favoured me with light godes, that sorowfull houre, that is to saie, the deth, had almoste drete myne hedde: but now for fortune cloudie hath chaunged her decevable chere to meward, myne unpitous life draweth along ungrecable dwellynges. O ye my frendes, what, or whereto avaunted ye me to ben welfull? For he that hath fallin, stode in no stedfast degre.

In the mene while, that I still record these thynges with my self, and marked my wepelie Complainte with office of pointell: I saugh stondyng aboven the hight of myn bed a woman of full grete reverence, by semblaunt. Her eyen brennyng, and clere, seyng over the common might of menne, with a lively colour, and with soche vigour and

COLVILLE.

I that in tyme of prosperite, and floryshyng studye, made pleasaunte and delectable dities, or verses: alas now beyng heauy and sad ouerthrowen in aduersitie, am compelled to fele and tast heuines and greif. Beholde the muses Poeticall, that is to saye: the pleasure that is in poetes verses, do appoynt me, and compel me to writ these verses in meter, and the sorowfull verses do wet my wretched face with very waterye teares, yssuinge out of my eyes for sorowe. Whiche muses no feare without doute could ouercome, but that they wold folow me in my journey of exile or banishment. Sometyme the ioie of happy and lusty delectable youth dyd comfort me, and nowe the course of sorowfull olde age causeth me to reioyse. For hasty old age vnloked for is come vpon me with al her incommodities and euyls, and sorow hath commaunded and broughte me into the same old age, that is to say: that sorowe causeth me to be olde, before my time come of olde age. The hoer heares do growe vntimely vpon my heade, and my reuiled skynne trembleth my flesh, cleane consumed and wasted with sorowe. Mannes death is happy, that cometh not in youth, when a man is lustye, and in pleasure or welth: but in time of aduersitie, when it is often desyred. Alas alas howe dull and deffe be the eares of cruel death vnto men in misery that would fayne dye: and yet refusythe to come and shutte vp theyr carefull wepyng eyes. Whiles that false fortune fauoryed me with her transitorye goodes, then the howre of death had almost ouercom me. That is to say deathe was redy to oppresse me when I was in prosperitie. Nowe for by cause that fortune beyng turned, from prosperitie into aduersitie (as the clere daye is darkyd with cloudes) and hath chaungyd her deceyuable countenance: my wretched life is yet prolonged and doth continue in dolour. O my frendes why haue you so often bosted me, sayinge that I was happy when I had honor possessions riches, and authoritie whych be transitory thynges. He that hath fallen was in no stedfast degre.

Whyles that I considerydde pryuylye with my selfe the thynges before sayd, and descrybed my wofull complainte after the maner and offyce of a wrytter, me thought I sawe a woman stand ouer my head of a reuerend countenance, hauyng quycke and glysteryng clere eyes, aboue the common sorte of men in lyuely and delectable coloure, and ful of

strength that it ne might not be nempned, all were it so, that she were full of so grete age, that menne woulde not trowen in no manere, that she were of our elde.

The stature of her was of doutous Judgemente, for sometye she constrained and shronke her selven, like to the common mesure of menne: And sometye it semed, that she touched the heven with the hight of her hedde. And when she hove her hedde higher, she perced the self heven, so that the sight of menne lokyng was in ydell: her clothes wer maked of right delie thredes, and subtel craft of perdurable matter. The whiche clothes she had woven with her owne handes, as I knewe well after by her self declaryng, and shewyng to me the beautie: The whiche clothes a darknesse of a forleten and dispised elde had dusked and darked, as it is wonte to darke by smoked Images.

In the netherest hemme and border of these clothes menne redde i woven therein a Grekishe A. that signifieth the life active, and above that letter, in the hiest bordure, a Grekishe C. that signifieth the life contemplative. And betwene these two letters there were seen degrees nobly wrought in maner of ladders, by whiche degrees menne might climben from the netherest letter to the upperest: nathelesse handes of some men hadden kerve that clothe, by violence or by strength, and the hygher parte wher the letter T. was whych is vnderstand speculation or contemplacion. Neuertheles the handes of some vyolente persones had cut the sayde vestures and had taken awaye certayne pecis thereof, such as euery one coulde catch. And she her selfe dyd bare in her ryght hand litel bokes, and in her lefte hande a scepter, which foresayd philosophy (when she saw the muses poetical present at my bed, spekyng sorrowful wordes to my wepynges) beyng angry sayd (with terrible or frownyng countenance) who suffred these crafty harlottes to com to thys sycke man? whych can help hym by no means of hys grieve by any kind of medicines, but rather increase the same with swete poyson. These be they that doo dystroye the fertile and plentious commodities of reason and the fruytes therof wyth their prykyng thornes, or barren affectes, and accustome or subdue mens myndes with sickenes, and heynes, and do not delyuer or heale them of the same. But yf your flatterye had conueyed or wythdrawen from me, any vnlernyd man as the comen sorte of people are wonte to be, I coulde haue ben better contentyd, for in that my worke should not be hurt or hynderyd. But you haue taken and conueyed from me thys man that hath ben broughte vp in the studyes of Aristotel and of Plato. But yet get you hence maremaids (that seme swete untill you haue brought a man to deathe) and suffer me to heale thys my man wyth my muses or scyences that be holsome and good. And after that philosophy had spoken these wordes the sayd compaignie of the musys poetical beyng rebukyd and sad, caste down their countenance to the ground, and by blussyng confessed their shamfastnes, and went out of the dores. But I (that had my syght dull and blynd wyth wepyng, so that I knew not what woman this was hauyng soo great auctoritie) was

strength, although she semed so olde that by no meanes she is thought to be one of this oure tyme, her stature is of douteful knowledge, for nowe she shewethe herselfe at the common length or statur of men, and other whiles she semeth so high, as though she touched heuen with the crown of her hed. And when she wold stretch fourth her hed hygher, it also perced thorough heauen, so that mens syghte coulde not attaine to behold her. Her vestures or cloths were perfyt of the finyste thredes, and subtyll workemanshypp, and of substaunce permanent, whych vesture she had woven with her own handes as I perceyued after by her owne saynge. The kynde of beawtye of the whyche vestures, a certayne darkenes or rather ignoraunce of oldenes forgotten hadde obscuryd and darkened, as the smoke is wont to darken Images that stand nyghe the smoke. In the lower parte of the said vestures was read the greke letter P. woven whych signifieth practise or actyffe, and in the hygher part of the vestures the greke letter T. whych estyndeth for theoric, that signifieth speculation or contemplation. And betwene these two letters were sene certayne degrees, of ladders, wherein was as it were a waye in steppes or degrees from the lower part wher the letter P. was which is vnderstand from practys or actyf, unto everiche manne of hem had borne awaie soche peces, as he might getten. And forsothe this foresaid woman bare smale bokes in her right hande, and in her left hand she bare a specter. And when she sawe these Poeticall muses approchyng about my bed, and endityng wordes to my wepynges, she was a litle amoved, and glowed with cruell eyen. Who (quod she) hath suffered approchen to this sike manne these comen strompettes, of which is the place that menne callen Theatre, the whiche onely ne asswage not his sorowes with remedies, but thei would feden and norishe hym with swete venime? Forsothe, that ben tho that with thornes, and prickynges of talentes of affections, whiche that ben nothyng fructuous nor profitable, distroyen the Corne, plentious of fructes of reson. For thei holden hertes of men in usage, but thei ne deliver no folke fro maladie. But if ye muses had wythdrawen fro me with your flatteries any unconnyng and unprofitable manne, as ben wont to finde comenly among the peple, I wold well suffre the lasse greuously. For why, in soche an unprofitable man myne ententes were nothyng endamaged. But ye wythdrawen fro me this man, that hath ben nourished in my studies or scoles of Eleaticis, and of Academicis in Grece. But goeth now rather awaie ye Mermaidens, whiche that ben swete, till it be at the last, and suffreth this man to be cured and heled by my muses, that is to say, by my notefull sciences. And thus this compaignie of muses iblamed casten wrothly the chere downward to the yerth, and shewing by rednesse ther shame, thei passeden sorowfully the thresholde. And I of whom the sight plounged in tere was darked, so that I ne might not know what that woman was, of so Imperial auctoritie, I woxe all abashed and stonied, and cast my sight doune to the yerth, and began still to abide what

amasyd or astonyed, and loking downward, toward the ground, I began pryvylye to look what thyng she would saye ferther, then she had said. Then she approching and drawynge nere vnto me, sat downe vpon the vttermost part of my bed, and loking vpon my face sad with weping, and declynyng toward the earth for sorow, bewayled the trouble of my minde wyth these saynges folowyng.

she would doen afterward. Then came she nere, and set her doune vpon the utterest corner of my bed, and she beholding my chere, that was cast to the yerth, hevie and grevous of wepyng, complained with these wordes (that I shall saine) the perturbacion of my thought.

II.

THE CONCLUSIONS OF THE ASTROLABIE.

This book (written to his son in the year of our Lord 1391, and in the 14 of King Richard II.) standeth so good at this day, especially for the horizon of Oxford, as in the opinion of the learned it cannot be amended, says an Editor of Chaucer.

LYTEL Lowys my sonne, I perceve well by certaine evidences thyne abylyte to lerne scyences, touching nombres and proportions, and also well consydre I thy besye prayer in especyal to lerne the tretyse of the astrolabye. Than for as moche as a philosopher saithe, he wrapeth hym in his frende, that condiscendeth to the ryghtfull prayers of his frende: therefore I have given the a sufficient astrolabye for oure orizont, compowned after the latitude of Oxenforde: vpon the whiche by mediacion of this lytell tretise, I purpose to teche the a certaine nombre of conclusions, pertainynge to this same instrument. I say a certaine nombre of conclusions for thre causes, the first cause is this. Truste wel that al the conclusions that have be founden, or ells possiblye might be founde in so noble an instrument as in the astrolabye, ben unknowen perfitely to a mortal man in this region, as I suppose. Another cause is this, that sothely in any cartes of the astrolabye that have ysene, ther ben some conclusions, that wol not in al thinges perfourme ther behestes: and some of hem ben to harde to thy tender age of ten yere to conceve. This tretise divided in five partes, wil I shewe the wondir light rules and naked wordes in Englishe, for Latine ne canst thou nat yet but smale, my litel sonne. But neverthelesse suffiseth to the these trewe conclusyons in Englishe, as well as suffiseth to these noble clerkes grekes these same conclusions in greke, and to the Arabines in Arabike, and to Jewes in Hebrewe, and to the Latin folke in Latyn: whiche Latyn folke had hem firste out of other divers langages, and write hem in ther owne tonge, that is to saine in Latine.

And God wote that in all these languages and in manye mo, have these conclusyons ben sufficiently lerned and taught, and yet by divers rules, right as divers pathes leden divers folke the right waye to Rome.

Now wol I pray mekely every person discrete, that redeth or hereth this lityl tretise to have my rude ententing excused, and my superfluite of wordes, for two causes. The first cause is, for that curious endityng and harde sentences is ful hevvy at ones, for soch a childe to lerne. And the seconde cause is this, that sothely me semeth better to written unto a childe twice a gode sentence, than he foriete it ones. And, Lowis, if it be so that I shewe the in my lith Englishe, as trewe conclusions touching this mater, and not only as trewe but as many and subtil conclusions as ben yshewed in latin, in any comon tretise of the astrolabye, conne me the more thanke, and praye God save the kinge, that is lorde of this langage, and all that him faith bereth, and obeieith everiche in his degree, the more and the lasse. But consydrith well, that I ne usurpe not to have founden this werke of my labour or of myne engin. I name but a leude compilatour of the laboure of olde astrologiens, and have it translated in myn englishe onely for thy doctrine: and with this sverde shal I slene envy.

The first party.

The first partye of this tretise shall reherce the figures, and the membres of thyne astrolaby, bycause that thou shalte have the greter knowinge of thine owne instrument.

The seconde party:

The seconde partye shal teche the to werken the very practike of the foresaid conclusions, as ferforthe and also narowe as may be shewed in so smale an instrument portatife aboute. For wel wote every astrologien, that smallest fractions ne wol not be shewed in so smal an instrument, as in subtil tables calculated for a cause.

III.

The Prologue of the TESTAMENT OF LOVE.

Many men there ben, that with eres openly sprad so moche swalowen the deliciousnesse of jestes and of ryme, by quaint knittinge coloures that of the godenesse or of the badnesse of the sentence take they litel hede of els none.

Sothelye dulle witte and a thoughtfulle soule so sore have mined and graffed in my spirites, that soche craft of enditinge woll nat ben of mine acquaintance. And for rude wordes and boistous percen the herte of the herer to the infest point, and planten there the sentence of thinges, so that with litel helpe it is able to spring, this boke, that nothyng hath of the

grete flode of wytte, ne of semelyche colours, is dolven with rude wordes and boistous, and so draw togidder to maken the catchers therof ben the more redy to hent sentence.

Some men there ben, that painten with colours riche and some with wers, as with red inke, and some with coles and chalke: and yet is there gode matter to the leude peple of thylke chalkye purtreiture, as hem thinketh for the time, and afterward the syght of the better colours yeven to hem more joye for the first leudenesse. So sothly this leude cloudy occupacyon is not to prayse, but by the leude, for comenly leude leudenesse commendeth. Eke it shal yeve sight that other precyous thynges shall be the more in reverence. In Latin and French hath many souveraine wittes had grete delyte to endite, and have many noble thingen fulfild, but certes there ben some that spoken ther poysye mater in Frenche, of whiche speche the Frenche men have as gode a fantasye as we have in heryng of Frenche mens Englishe. And many termes there ben in Englyshe, whiche unneth we Englishe men connen declare the knowleginge: howe should than a Frenche man borne? soche termes con ne jumpere in his matter, but as the jay chatereth Englishe. Right so truly the understandyn of Englishmen woll not stretche to the privie termes in Frenche, what so ever we hosten of straunge langage. Let than clerkes enditen in Latin, for they have the propertie of science, and the knowinge in that facultie: and lette Frenche men in ther Frenche also enditen, ther queint termes, for it is kyndely to ther mouthes; and let us shewe our fantasies in such wordes as we lerneden of our dame's tonge. And although this boke be lytel thank worthy for the leudnesse in travaille, yet soch writing exiten men to thilke thinges that ben necessarie: for every man thereby may as by a perpetual myrrour sene the vices or vertues of othen, in whiche thyng lightly may be conceived to eschue perils, and necessities to catch, after as adventures have fallen to other peple or persons.

Certes the souverainste thinge of desire and most creture resonable, have or els shuld have full appetite to ther perfeccyon: unresonable bestes mowen not, si the reson hath in hem no workinge: than resonable that wol not, is comparisoned to unresonable, and made lyke hem. Forsothe the most souveraine and finall perfeccion of man is in knowynge of a sothe, withouten any entent decevable, and in love of one very God, that is inchaungeable, that is to knowe, and love his creator.

Nowe principally the mene to brynge in knowleging and lovyng his creatour, is the consideracyon of thynges made by the creatour, wher through by thylke thinges that ben made, understandynge here to our wyttes, arne the unsene privities of God made to us syghtfull and knowinge, in our contemplacion and understandinge. These thinges than forsothe moche bringen us to the ful knowleginge sothe, and to the parfyte love of the maker of heavenly thynges. Lo! David saith: thou haste delited me in makinge, as who saith, to have delite in the tune how God hat lent me in consideracion of thy makinge. Wherof Aristotle in the boke de Animalibus, saith to naturell philosophers: it is a grete likynge in love of nowinge ther cretoure: and also in knowinge of causes in kindelye thynges, considrid forsothe the formes of kindelye thinges and the shap, a gret kyndely love we shulde have to the werkman that hem made. The crafte of a werkman is shewed in the werk. Herefore trulie the philosophers with a lyvely studie manie noble thinges, righte precious, and worthy to memorye, written, and by a gret swet and travaille to us lesten of causes the properties in nature of thinges to whiche therfore philosophers it was more joy, more lykynge, more herty lust in kindely vertues and matters of reson the perfeccion by busy study to knowe, than to have had all the tresour, al the richesse, al the vaine glory, that the passed emperours, princes, or kinges hadden. Therefore the names of hem in the boke of perpetuall memorie in vertue and pece arne writen; and in the contrarie, that is to saine, in Styxe the foule pitte of helle arne thilke pressed that both godenes hated. And because this boke shall be of love, and the prime causes of stering in that doinge with passions and diseses for wantinge of desire, I wil that this boke be cleped the testament of love.

But nowe thou rede, who is thilke that will not in scorne laughe to here a dwarfe or els halfe a man, say he wil reade out the swerde of Hercules handes, and also he shulde set Hercules Gades a mile yet ferther, and over that he had power of strength to pull up the spere, that Alisander the noble might never wagge, and that passinge al thinge to ben mayster of Fraunce by might, there as the noble gracious Edward the thirde for al his grete prowess in victories, ne might al yet conquere?

Certes I wote well, ther shall be made more scorne and jape of me, that I so unworthely clothed altogether in the cloudie cloude of unconning, wil putten me in prees to speak of love, or els of the causes in that matter, si the al the grettest clerkes han had ynough to don, and as who saith gathered up clene toforne hem, and with ther sharp sibbes of conning al-mowen and made therof grete rekes and noble, ful of al plenties to fede me and many an other. Envy forsothe commendeth noughte his reson, that he hath in hain, be it never so trusty. And although these noble repers, as gode workmen and worthy ther hier, han al draw and bounde up in the sheves, and made many shoces, yet have I ensample to gadher the smale crommes, and fullin ma walet of tho that fallen from the bourde among the smale houndes, notwithstanding the travaille of the almoigner, that hath draw up in the cloth at the remisailles, as trenchiours, and the relefe to bere to the almesse. Yet also have I leve of the noble husbnde Boece, although I be a straunger of conninge to come after his doctrine, and these grete workmen, and glene my handfuls of the shedynge after ther handes, and yf me faile ought of my ful, to encrease my porcion with that I shal drawe by privities out of shoces; a slye servaunte in his owne helpe is often moche commended; knowynge of trouthe in causes of thynges, was more hardier in the firste

sechers, and so sayth Aristotle, and lighter in us that han folowed after. For ther passing study han freshed our wittes, and oure understandynge han excited in consideracion of trouth by sharpenes of ther resons. Utterly these thinges be no dremes ne japes, to throwe to hogges, it is lyfelych mete for children of trouth, and as they me betiden whan I pilgramed out of my kith in wintere, whan the wether out of mesure was boistous, and the wyld wynd Boreas, as his kind asketh, with drynge coldes maketh the wawes of the ocean se so to arise unkindely over the commune bankes that was in point to spill all the erthe.

I. *From the PROLOGUE to the CANTERBURY TALES of CHAUCER.*

When that Aprilis with his shouris sote,
The drought of March had percid to the rote,
And bathid every veyn in such licour,
Of which vertue engendrid is the flour.
When Zephyrus eke, with his swete broth
Enspirid hath, in every holt and heth
The tender croppis; and that the yong Sunn
Hath in the Ramm his halvè cours yrunn:
And smale foulis makin melodye,
That slepin allè night with opyn eye,
(So prickith them nature in ther corage)
Then longin folk to go on pilgrimage:
And palmers for to sekin strange strondes,
To servin halowes couth in sondry londes:
And specially fro every shir's end
Of England, to Canterbury they wend,
The holy blisfull martyr for to seke,
That them hath holpin, whan that they were seke.

Befell that in that seson on a day
In Southwerk at the Tabberd as I lay,
Redy to wendin on my pilgrimage
To Canterbury, with devote corage,
At night wer come into that hostery
Wele nine and twenty in a company
Of sundrie folk, by aventure yfall
In felaschip; and pilgrimes ver they all;
That toward Canterbury wouldin ride.
The chambers and the stablis werin wide,
And well we werin esid at the best:
And shortly whan the sunne was to rest,
So had I spokin with them everych one,
That I was of ther felaschip anone;
And made forward erli for to rise,
To take our weye, ther as I did devise.

But natheless white that I have time and space,
Er that I farther in this tale pace,
Methinkith it accordaunt to reson,
To tell you allè the condition
Of ech of them, so as it semid me,
And which they werin, and of what degree,
And eke in what array that they wer in:
And at a knight then wold I first begin.

A KNIGHT ther was, and that a worthy man,
That fro the tyme that he first began
To ridin out he lovèd Chevalrie,
Trough and honour, frédome and curtesy.

Full worthy was he in his lord's werre,
And thereto had he riddin nane more ferre
As well in Christendom, as in Hethness;
And evyr honoured for his worthiness.
At Alessandre' he was whan it was won;
Full oft timis he had the bord begon.
Abovin allè naciouns in Puce;
In Lettow had he riddin, and in Luce,
No Christen-man so oft of his degree
In Granada; in the sege had he be
Of Algezir, and riddin Belmary;
At Leyis was he, and at Sataly,
Whan that they wer won; and in the grete see
At many a noble army had he be:
At mortal battails had he ben fiftene,
And foughtin for our feith at Tramesene,
In listis thrys, and alwey slein his fo.

This ilkè worthy knight had ben also
Sometimis with the lord of Palathy,
Ayens anothir hethin in Turkey;
And evirmore he had a sov'rane prize;
And though that he was worthy, he was wise;
And of his port as meke as is a maid,
He nevir yet no villany ne said
In all his life unto no manner wight;
He was a very parfit gentil knight.
But for to tellin you of his array,
His hors wer good; but he was nothing gay,
Of fustian he werid a gipon,
Allè besmottrid with his haburgeon.
For he was late ycome from his viage,
And wente for to do his pilgrimage.

II.

THE HOUSE OF FAME.

The First Boke.

Now herkin, as I have you saied,
What that I mette or I abraied,
Of December the tenith daie,
When it was night, to slepe I laie,
Right as I was wonte for to doen,
And fill aslepè wondir sone,
As he that was werie forgo
On pilgrimage milis two

To the corps of saint Leonarde,
To makin lithe that erst was harde.

But as me slept me mette I was
Within a temple imade of glas,
In whiche there werin mo images
Of golde, standyng in sondrie stages,
Sette in mo riche tabirnaclis,
And with perrè mo pinnacles,
And mo curious portraitureis,
And queint manir of figuris
Of golde worke, then I sawe evir.

But certainly I n'ist nevir
Where that it was, but well wist I
It was of Venus redily
This temple, for in purtreiture
I sawe anone right her figure
Nakid yfletyng in a se,
And also on her hedde parde
Her rosy garland white and redde,
And her combe for to kembe her hedde,
Her dovis, and Dan Cupido
Her blindè sonne, and Vulcano,
That in his face ywas full broune.

But as I romid up and doune,
I founde that on the wall there was
Thus writtin on a table of bras.

I woll now syng, if that I can,
The armis, and also the man,
That first came through his destine
Fugitive fro Troye the countre
Into Itaille, with full moche pine,
Unto the strondis of Lavine,
And tho began the storie anone,
As I shall tellin you echone.

First sawe I the distruccion
Of Troie, thorough the Greke Sinon,
With his false untrue forswerynges,
And with his chere and his lesynges,
That made a horse, brought into Troye,
By whiche Trojans loste all ther joye.

And afir this was graved, alas!
How Ilions castill assailed was,
And won, and kyng Priamus slain,
And Polites his sonne certain,
Dispitously of Dan Pyrrhus.

And next that sawe I howe Venus,
When that she sawe the castill brende,
Doune from hevin she gan discende,
And bade her sonne Æneas fle,
And how he fled, and how that he
Escapid was from all the pres,
And toke his fathre, old Anchises,
And bare hym on his backe awaie,
Crying alas and welawaie!
The whiche Anchises in his hande,
Bare tho the goddis of the lande

I mene thilke that unbrennid were.

Then sawe I next that all in fere
How Creusa, Dan Æneas wife,
Whom that he lovid all his life,
And her yong sonne clepid Julo,
And eke Ascanius also,
Fleddin eke, with full drierie chere,
That it was pite for to here,
And in a forest as thei went
How at a tournyng of a went
Cretisa was iloste, alas!
That rede not I, how that it was
How he her sought, and how her ghoste
Bad him to fle the Grekis hoste,
And saied he must into Itaille,
As was his destinie, sauns faile,
That it was pitie for to here,
When that her spirite gan appere,
The wordis that she to hym saied,
And for to kepe her sonnè hym praied

There sawe I gravin eke how he
His fathir eke, and his meine,
With his shippis began to saile
Toward the countrey of Itaille,
As streight as ere thei mightin go.

There sawe I eke the, cruill Juno,
That art Dan Jupiter his wife,
That hast ihatid all thy life
Merciless all the Trojan blode,
Rennin and crie as thou were wode
On Æolus, the god of windes,
To blowin out of allè kindes
So loudè, that he should ydrenche
Lorde, and ladie, and grome, and wenche
Of all the Trojanis nacion,
Without any of ther savacion.

There sawe I soche tempest arise,
That evèry herte might agrise
To se it paintid on the wall.

There sawe I eke gravin withhall,
Venus, how ye, my ladie dere,
Ywepyng with full wofull chere
Yprayid Jupiter on hie,
To save and kepin that navie
Of that dere Trojan Æneas,
Sithins that he your sonne ywas.

III.

GODE COUNSALE of CHAUCER.

Flee fro the prese and dwell with sothfastnesse,
Suffise unto thy gode though it be small,
For horde hath hate, and climbyng ikillnesse,
Prece hath envie, and wele it brent oer all,
Savour no more then the behovin shall,
Rede well thy self, that othir folke canst rede,
And trouthe the shall delivir it is no drede.

Painè the not eche crokid to redresse,
 In trust of her that tournith as a balle,
 Grete rest standith in litil businesse,
 Beware also to spurne againe a nalle,
 Strive not as doith a crocke with a walle,
 Demith thy self, that demist othirs dede,
 And trouthe the shall deliver it is no drede.

That the is sent receve in buxomenesse;
 The wrastlyng of this worlde askith a fall;
 Here is no home, here is but wildirnesse;
 Forthe pilgrim, forthe o best out of thy stall,
 Loke up on high, and thanke thy God of all,
 Weivith thy luste and let thy ghost the lede,
 And trouthe the shall delivir, it is no drede.

IV.

BALADE of the VILLAGE WITHOUT PAINTYNG.

This wretchid worldes transmutacion
 As wele and wo, nowè pore, and now honour,
 Without ordir or due discrecion
 Govirnid is by fortunes error;
 But nathèlesse the lacke of her favour
 Ne maie not doe me syng though that I die,
 J'ay tout perdu, mon temps & mon labour
 For finally fortune I doe defie.

Yet is me left the sight of my resoun
 To knowin frende fro foe in thy mirrour,
 So moche hath yet thy tournyng up and down,
 I taughtin me to knowin in an hour,
 But truely no force of thy reddour
 To hym that ovir hymself hath maistrie,
 My suffisaunce yshal be my succour,
 For finally fortunè I do defie.

O Socrates, thou stedfast champion,
 She ne might nevir be thy turmentour,
 Thou nevir dreddist her oppression,
 Ne in her chere foundip thou no favour,
 Thou knewe wele the disceipt of her colour,
 And that her moste worship is for to lie,
 I knowe her eke a false dissimulour,
 For finally fortune I do defie.

The answer of Fortune.

No man is wretchid but hymself it wene,
 He that yhath hymself hath suffisaunce,
 Why saiest thou then I am to the so kene,
 That hast thy self out of my govirnaunce?
 Saie thus grant mercie of thin habundaunce,
 That thou hast lent or this, thou shalt not strive,
 What wost thou yet how I the woll avaunce?
 And eke thou hast thy bestè frende alive.

Lydgate was a monk of *Bury*, who wrote about the same time with *Chaucer*. Out of his prologue to his third book of the *Fall of Princes* a few stanzas are selected, which, being compared with the style of his two contemporaries, will show that our language was then not written by caprice, but was in a

I have the taught division betwene
 Frende of effecte, and frende of countinaunce,
 The nedith not the galle of an hine,
 That curith eyin derke for ther penaunce;
 Now seest thou clere that wer in ignoraunce,
 Yet holt thine anker, and thou maiest arrive
 There bountie bereth the key of my substaunce,
 And eke thou haste thy bestè frende alive.

How many have I refused to sustene,
 Sith I have the fostrid in thy plesaunce?
 Wolt thou then make a statute on thy quene,
 That I shall be aie at thine ordinaunce?
 Thou born art in my reign of variaunce,
 Aboutt the whele with othir must thou drive
 My lore is bet, then wicke is thy grevaunce,
 And eke thou hast thy bestè frende alive.

The answer to Fortune.

Thy lore I dampne, it is adversitie,
 My frend maist thou not revin blind goddesse,
 That I thy frendis knowe I thanke it the,
 Take hem again, let hem go lie a presse,
 The nigardis in kepyng ther richesse
 Pronostike is thou wolt ther toure assaile,
 Wicke appetite cometh aie before sicknesse,
 In generall this rule ne maie not faile.

Fortune.

Thou pinchist at my mutabilitie,
 For I the lent a droppe of my richesse,
 And now me likith to withdrawin me,
 Why shouldist thou my roialtie oppresse?
 The se maie ebbe and flowin more and lesse,
 The welkin hath might to shine, rain, and haile,
 Right so must I kithin my brotilnesse,
 In generall this rule ne maie not faile.

The Plaintiffe.

Lo, the execucion of the majestie,
 That all purveighith of his rightwisenesse,
 That samè thyng fortune yclepin ye,
 Ye blindè bestis full of leudèness!
 The heven hath propirtie of sikirness,
 This worldè hath evir restlesse travaile,
 The last daie is the ende of myne entresse,
 In generall this rule ne maie not faile.

Th'envoye of Fortune.

Princes I praie you of your gentillesse,
 Let not this man and me thus crie and plain,
 And I shall quitin you this businesse,
 And if ye liste releve hym of his pain,
 Praie ye his best frende of his noblenesse
 That to some bettir state he maie attain.

Like a pilgrime which that goeth on foote,
And hath none horse to releue his trauayle,
Whote, drye and wery, and may find no bote
Of wel cold whan thrust doth hym assayle,
Wine nor licour, that may to hym auayle,
Right so fare I which in my businesse,
No succour fynde my rudenes to redresse.

I meane as thus, I haue no ffish licour
Out of the conduites of Calliope,
Nor through Clio in rhetorike no floure,
In my labour for to refresh me:
Nor of the susters in noumber thrise three,
Which with Cithera on Parnaso dwell,
They neuer me gaue drinke once of their wel.

Nor of theyr springes clere and cristaline,
That sprange by touchyng of the Pegase,
Their fauour lacketh my making ten lumine
I fynde theyr bawme of so great scarcitie,
To tame their tunnes with some drop of plentie
For Poliphemus throw his great blindnes,
Hath in me derked of Argus the brightnes.

Our life here short of wit the great dulnes
The heuy soule troubled with trauayle,
And of memorye the glasyng brotelnes,
Drede and vncunning haue made a strong batail
With werines my spirite to assayle,
And with their subtil creping in most quient
Hath made my spirit in makyng for to feint.

And ouermore, the ferefull frowardnes
Of my stepmother called obliuion,
Hath a bastyll of foryetfulnes,
To stoppe the passage, and shadow my reason
That I might haue no clere direccion,
In translating of new to quicke me,
Stories to write of olde antiquite.

Thus was I set and stode in double werre
At the metyng of feareful wayes tweyne,
The one was this, who euer list to lere,
Whereas good wyll gan me constrayne,
Bochas accomplish for to doe my payne,
Came ignoraunce, with a menace of drede,
My penne to rest I durst not procede.

Fortescue was chief justice of the Common-Pleas, in the reign of king *Henry VI.* He retired in 1471, after the battle of Tewkesbury, and probably wrote most of his works in his privacy. The following passage is selected from his book of the *Difference between an absolute and limited Monarchy.*

Hyt may peraventure be marvelid by some men, why one Realme is a Lordshyp only *Royall*, and the Prynce thereof rulyth yt by his Law, callid *Jus Regale*; and another Kyngdome is a Lordschip, *Royal and Politike*, and the Prince thereof rulyth by a Lawe, called *Jus Politicum et Regale*; sythen thes two Princes beth of egall Astate.

To this dowte it may be answeryd in this manner; The first Institution of thes twoo Realmys, upon the Incorporation of them, is the Cause of this diversyte.

When Nembroth by Might, for his own Glorye, made and incorporate the first Realme, and subduyd it to hymself by Tyrannye, he would not have it governyd by any other Rule or Lawe, but by his own Will; by which and for th' accomplishment thereof he made it. And therfor, though he had thus made a Realme, holy Scripture denyd to cal hym a Kyng, *Quia Rex dicitur a Regendo*; Whych thyng he dyd not, but oppressyd the People by Myght, and therfor he was a Tyrant, and callid *Primus Tyrannorum*. But holy Writ callith hym *Robustus Venator coram Deo*. For as the Hunter takyth the wyld beste for to sle and eate hym; so Nembroth subduyd to him the People with Might, to have their service and their goods, using upon them the Lordschip that is callid *Dominium Regale tantum*. After hym Belus that was callid first a Kyng, and after hym his Sone Nynus, and after hym other Panymys; They, by Example of Nembroth, made them Realmys, would not have them rulyd by other Lawys than by their own Wills. Which Lawys ben right good under good Princes; and their Kyngdoms a then most resemblyd to the Kyngdome of God, which reynith upon Man, rulyng him by hys own Will. Wherfor many Crystyn Princes usen the same Lawe; and therfor it is, that the Lawys sayen, *Quod Principi placuit Legis habet vigorem*. And thus I suppose first beganne in Realmys, *Dominium tantum Regale*. But afterward, whan Mankynd was more mansuete, and better disposyd to Vertue, Grète Communalities, as was the Feliship, that came into this Lond with Brute, wylling to be unyed and made a Body Politike callid a Realme, havyng an Heed to governe it; as after the Saying of the Philosopher, every Commualtie unyed of many parts must needs have an Heed; than they chose the same Brute to be their Heed and Kyng. And they and he upon this Incorporation and Institution, and onyng of themselves into a Realme, ordeynyd the same Realme so to be rulyd and justyfyd by such Lawys, as they al would assent unto; which Law therfor is callid *Politicum*; and bycause it is mynystrid by a Kyng, it is callid *Regale*. *Dominium Politicum dicitur quasi Regimen; plurium Scientia, sive Consilio ministratum*. The Kyng of Scotts reynith upon his People by this Lawe, *videlicet, Regimine Politico et Regali*. And Diodorus Syculus saith, in his Boke *de priscis Historicis*, the Realme of Egypte is ruli'd by the same Lawe, and therfor the Kyng therof chaungith not his Lawes, without the Assent of his People. And in like forme as he saith is ruled the Kyngdome of Saba, in Felici Araba and the Lond of *Libie*; And also the more parte of al the Realmys in *Afrike*. Which manner of Rule and Lordship, the sayd Diodorus in that Boke, praysith gretely. For it is not only good for the

Prince, that may thereby the more sewerly do Justice, than by his owne Arbitriment; but it is also good for his People that receyve thereby, such Justice as they desyer themself. Now as me seymth, it ys shewyd opinly ynough, why one Kyng rulyth and reynith on his People *Dominio tantum Regali*, and that other reynith *Dominio Politico et Regali*: For that one Kyngdome beganne, of and by, the Might of the Prince, and that other beganne, by the Desier and Institution of the People of the same Prince.

Of the works of Sir *Thomas More* it was necessary to give a larger specimen, both because our language was then in a great degree formed and settled, and because it appears from *Ben Johnson*, that his works were considered as models of pure and elegant style. The tale, which is placed first, because earliest written, will show what an attentive reader will, in perusing our old writers, often remark, that the familiar and colloquial part of our language, being disused among those classes who had no ambition of refinement, or affectation of novelty, has suffered very little change. There is another reason why the extracts from this authour are more copious: his works are carefully and correctly printed, and may therefore be better trusted than any other edition of the English books of that, or the preceding ages.

A MERRY IEST HOW A SERGEANT WOULD LEARNE TO PLAYE THE FRERE.

Written by maister THOMAS MORE in hys youth.

WYSE men alway,
Affyrme and say,
That best is for a man:
Diligently
For to apply,
The busines that he can,
And in no wyse,
To enterpryse,
An other faculte,
For he that wyll,
And can no skyll,
Is neuer lyke to the.
He that hath laste,
The hosiers crafte,
And falleth to making shone,
The smythe that shall,
To payntying fall,
His thrift is well nigh done.
A blacke draper,
With whyte paper,
To-goe to writying scole,
An olde butler,
Becum a cutler,
I wene shall proue a fole.
And an olde trot,
That can I wot,
Nothyng but kysse the cup,
With her phisick,
Wil kepe one sicke,
Tyll she haue soused hym vp
A man of lawe,
That neuer sawe,
The wayes to bye and sell,
Wenyng to ryse,
By marchaundise,
I wish to spede hym well.

A marchaunt eke,
That wyll goo seke,
By all the meanes he may,
To fall in sute,
Tyll he dispute,
His money cleane away,
Pletying the lawe,
For euery strawe,
Shall proue a thrifty man,
With bate and strife,
But by my life,
I cannot tell you whan.
Whan an hatter
Wyll go smatter,
In philosophy,
Or a pedlar,
Ware a medlar,
In theology,
All that ensue,
Suche craftes new,
They driue so farre a cast,
That euermore,
They do therfore,
Beshrewe themselfe at last.
This thing was tryed
And verefyed,
Here by a sergeaunt late,
That thriftly was,
Or he coulde pas,
Rapped about the pate,
Whyle that he would
See how he could,
A little playe the frere.
Now yf you wyll
Knowe how it fyll,
Take hede and ye shall here.

It happed so,
Not long ago,
A thrifty man there dyed,
An hundred pounde,
Of nobles rounde,
That had he layd a side;
His sonne he wolde,
Should haue this golde,
For to beginne with all:
But to suffice
His chylde, well thrise,
That money was to smal.
Yet or this day
I have hard say,
That many a man certesse,
Hath with good cast,
Be ryche at last,
That hath begonne with lesse.
But this yonge manne,
So well beganne,
His money to imploy,
That certainly,
His policy,
To see it was a joy,
For lest sum blast,
Myght ouer cast,
His ship, or by mischaunce,
Men with sum wile,
Myght hym begyle,
And minish his substaunce,
For to put out,
All maner dout,
He made a good puruay,
For euery whyt,
By his owne wyt,
And toke an other way:

First fayre and wele,
 Therof much dele,
 He dygged it in a pot,
 But then him thought,
 That way was nought,
 And there he left it not.
 So was he faine,
 From thence agayne,
 To put it in a cup,
 And by and by,
 Couetously,
 He supped it fayre vp.
 In his owne brest,
 He thought it best,
 His money to enclose,
 Then wist he well,
 What euer fell,
 He coude it neuer lose.
 He borrowed then,
 Of other men,
 Money and marchaundise:
 Neuer paid it,
 Up he laid it,
 In like maner wyse.
 Yet on the gere,
 That he would were,
 He reight not what he spent,
 So it were nyce,
 As for the price,
 Could him not miscontent.
 With lusty sporte,
 And with resort,
 Of ioly company,
 In mirth and play,
 Full many a day,
 He liued merely.
 And men had sworne,
 Some man is borne,
 To haue a lucky howre,
 And so was he,
 For such degre,
 He gat and suche honour,
 That without dout,
 Whan he went out,
 A sergeaunt well and fayre,
 Was redy straye,
 On him to wayte,
 As soon as on the mayre.
 But he doubtlesse,
 Of his mekenesse,
 Hated such pompe and pride,
 And would not go,
 Companied so,
 But drewe himself a side.

To saint Katharine,
 Streight as a line,
 He gate him at a tyde,
 For deuocion,
 Or promocion,
 There would he nedes abyde.
 There spent he fast,
 Till all were past,
 And to him came there meny,
 To aske theyr det,
 But none could get,
 The valour of a peny.
 With visage stout,
 He bare it out,
 Euen vnto the harde hedge,
 A month or twaine,
 Tyll he was faine,
 To laye his gowne to pledge.
 Than was he there,
 In greater feare,
 Than ere that he came thither,
 And would as fayne,
 Depart againe,
 But that he wist not whither.
 Than after this,
 To a frende of his,
 He went and there abode,
 Where as he lay,
 So sick alway,
 He myght not come abrode.
 It happed than,
 A marchant man,
 That he ought money to,
 Of an officere,
 Than gan enquire,
 What him was best to do.
 And he answerde,
 Be not aferde,
 Take an accion therfore,
 I you beheste,
 I shall hym reste,
 And than care for no more.
 I feare quod he,
 It wyll not be,
 For he wyll not come out.
 The sergeaunt said,
 Be not afrajd,
 It shall be brought about.
 In many a game,
 Lyke to the same,
 Haue I bene well in vre,
 And for your sake,
 Let me be bake,
 But yf I do this cure.

Thus part they both,
 And forth then goth,
 A pace this officere,
 And for a day,
 All his array,
 He chaunged with a frere.
 So was he dight,
 That no man might,
 Hym for a frere deny,
 He dopped and dooked,
 He spake and looked,
 So religiously.
 Yet in a glasse,
 Or he would passe,
 He toted and he peered,
 His harte for pryde,
 Lepte in his syde,
 To see how well he freered.
 Than forth a pace,
 Unto the place,
 He goeth withouten shame
 To do this dede,
 But now take hede,
 For here begynneth the game.
 He drew hym ny,
 And softly,
 Streight at the dore he knocked:
 And a damsell,
 That hard hym well,
 There came and it vnlocked:
 The frere sayd,
 Good spede fayre mayd,
 Here lodgeth such a man,
 It is told me:
 Well syr quod she,
 And yf he do what than.
 Quod he maystresse,
 No harme doutlesse:
 It longeth for our order,
 To hurt no man,
 But as we can,
 Euery wight to forder.
 With hym truly,
 Fayne speake would I.
 Sir quod she by my fay,
 He is so sike,
 Ye be not lyke,
 To speake with hym to day.
 Quod he fayre may,
 Yet I you pray,
 This much at my desire,
 Vouchesafe to do,
 As go hym to,
 And say an austen frere

Would with hym speke,
 And matters breake,
 For his auayle certayn.
 Quod she I wyll,
 Stonde ye here styll,
 Tyll I come downe agayn.
 Vp is she go,
 And told hym so,
 As she was bode to say,
 He mistrustying,
 No maner thyng,
 Sayd mayden go thy way,
 And fetch hym hyder,
 That we togyder,
 May talk. A downe she gothe,
 Vp she hym brought,
 No harme she thought,
 But it made some folke wrothe.
 This offikere,
 This fayned frere,
 Whan he was come aloft,
 He dopped than,
 And grete this man,
 Religiously and oft.
 And he agayn,
 Ryght glad and fayn,
 Toke hym there by the hande,
 The frere than sayd,
 Ye be dismayd,
 With trouble I understande.
 In dede quod he,
 It hath with me,
 Bene better than it is.
 Syr quod the frere,
 Be of good chere,
 Yet shall it after this.
 But I would now,
 Comen with you,
 In counsayle yf you please,
 Or ellys nat
 Of matters that,
 Shall set your heart at ease.
 Downe went the mayd,
 The marchaunt sayd,
 Now say on gentle frere,
 Of thys tydyng,
 That ye me bryng,
 I long full sore to here.
 Whan there was none,
 But they alone,
 The frere with euyl grace,
 Sayd, I rest the,
 Come on with me,
 And out he toke his mace :

Thou shalt obay,
 Come on thy way,
 I have the in my clouche,
 Thou goest not hence,
 For all the pense,
 The mayre hath in his pouche.
 This marchaunt there,
 For wrath and fere,
 He waxing welnygh wood,
 Sayd horson thefe,
 With a mischefe,
 Who hath taught the thy good.
 And with his fist,
 Vpon the lyst,
 He gaue hym such a blow,
 That backward downe,
 Almost in sowne,
 The frere is ouerthrow.
 Yet was this man,
 Well fearder than,
 Lest he the frere had slayne,
 Tyll with good rappes,
 And heuy clappes,
 He dawde hym vp agayne.
 The frere toke harte,
 And vp he starte,
 And well he layde about,
 And so there goth,
 Betwene them both,
 Many a lusty clout.
 They rent and tere,
 Eche others here,
 And claue togyder fast,
 Tyll with luggying,
 And with tuggying,
 They fell downe bothe at last.
 Than on the grounde,
 Togyder rounde,
 With many a sadde stroke,
 They roll and rumble,
 They turne and tumble,
 As pygges do in a poke.
 So long aboue,
 They heue and shoue,
 Togider that at last,
 The mayd and wyfe,
 To breake the strife,
 Hyed them vpward fast.
 And whan they spye,
 The captaynes lye,
 Both waltring on the place,
 The freres hood,
 They pulled a good,
 Adowne about his face

Why he was blynde,
 The wenche behynde
 Lent him leyd on the flore,
 Many a ioule,
 About the noule,
 With a great batyldore.
 The wyfe came yet,
 And with her fete,
 She holpe to kepe him downe,
 And with her rocke,
 Many a knocke,
 She gaue hym on the crowne.
 They layd his mace,
 About his face,
 That he was wood for payne:
 The fryre frappe,
 Gate many a swappe,
 Tyll he was full nygh slayne.
 Vp they hym lift,
 And with yll thrift,
 Hedlyng a long the stayre,
 Downe they hym threwe,
 And sayde adewe,
 Commende us to the mayre
 The frere arose,
 But I suppose,
 Amased was his hed,
 He shoke his eares,
 And from grete feares,
 He thought hym well yfled
 Quod he now lost,
 Is all this cost,
 We be neuer the nere.
 Ill mote he be,
 That caused me,
 To make my self a frere
 Now masters all,
 Here now I shall,
 Ende there as I began,
 In any wyse,
 I would auyse,
 And counsayle euery man,
 His owne craft vse,
 All newe refuse,
 And lyghtly let them gone:
 Play not the frere,
 Now make good chere,
 And welcome euerych one.

A RUFUL LAMENTACION (*written by master THOMAS MORE in his youth*) of the deth of quene Elisabeth mother to king Henry the eighth, wife to king Henry the seventh, and eldest doughter to king Edward the fourth, which quene Elisabeth dyed in childbed in February in the yere of our Lord 1503, and in the 18 yere of the raigne of king Henry the seventh.

O ye that put your trust and confidence
In worldly ioy and frayle prosperite,
That so lyue here as ye should neuer hence,
Remember death and loke here vppon me.
Ensaumple I thynke there may no better be.
Your selfe wotte well that in this realme was I
Your quene but late, and lo now here I lye.

Was I not borne of olde worthy linage?
Was not my mother queene my father kyng?
Was I not a kinges fere in marriage?
Had I not plenty of euery pleasaunt thyng?
Mercifull god this is a straunge rekenyng:
Rychesse, honour, welth, and auncestry
Hath me forsaken and lo now here I ly.

If worship myght haue kept me, I had not gone;
If wyt myght haue me saued, I neded not fere;
If money myght haue holpe, I lacked none:
But O good God what vayleth all this gere?
When deth is come thy mighty messangere,
Obey we must: there is no remedy:
Me hath he sommoned, and lo now here I ly.

Yet was I late promised otherwyse,
This yere to liue in welth and delice.
Lo where to commeth thy blandishyng promyse,
O false astrolagy and deuynatrice,
Of goddes secretes makyng thy selfe so wyse.
How true is for this yere thy prophecy:
The yere yet lasteth, and lo now here I ly.

O brytill welth, as full of bitternesse,
Thy single pleasure doubled is with payne.
Account my sorow first and my distresse,
In sondry wyse, and reckon there agayne,
The ioy that I haue had, and I dare sayne,
For all my honour, endured yet haue I
More wo then welth, and lo now here I ly.

Where are our castels, now where are our towers?
Goodly Rychmonde sone art thou gone from me:
At Westminster that costly worke of yours,
Myne owne dere lorde now shall I neuer see.
Almighty god vouchesafe to graunte that ye,
For you and your children well may edefy.
My palyce bylded is, and lo now here I ly.

Adew myne owne dere spouse my worthy lorde:
The faithfull loue, that dyd vs both combyne,
In mariage and peasable concorde,
Into your handes here I cleane resyne,
To be bestowed vppon your children and myne.
Erst wer you father, and now must ye supply,
The mothers part also, for lo now here I ly.

Farewell my doughter lady Margerete:
God wotte full oft it greued hath my mynde,
That ye should go where we should seldome mete.
Now am I gone, and haue left you behynde.
O mortall folke that we be very blynde.
That we least feare, full oft it is most nye:
From you depart I fyrst, and lo now here I lye.

Farewell Madame my lordes worthy mother:
Comfort your sonne, and be ye of good chere.
Take all a worth, for it will be no more.
Farewell my doughter Katherine late the fere,
To prince Arthur myne owne chyld so dere,
It booteth not for me to wepe or cry.
Pray for my soule, for lo now here I ly.

Adew lord Henry my louyng sonne adew:
Our lorde encrease your honour and estate.
Adew my doughter Mary bright of hew:
God make you vertuous wyse and fortunate.
Adew swete babe suche is thy desteny:
Thy mother neuer know, for lo now here I ly.

Lady Cicely Anne and Katheryne,
Farewell my welbeloved sisters three:
O lady Briget other sister myne,
Lo here the ende of worldly vanitee.
Now well are ye that earthly folly flee,
And heuenly thynges loue and magnify,
Farewell and pray for me, for lo now here I ly.

Adew my lordes, adew my ladies all:
Adew my faithful seruantes euerych one:
Adew my commons whom I neuer shall
See in this world: wherfore to the alone,
Immortall god verely three and one,
I me commende. Thy infinite mercy,
Shew to thy seruant, for lo now here I ly.

CERTAIN METERS IN ENGLISH *written by master THOMAS MORE in his youth for the BOKE OF FORTUNE, and caused them to be printed in the begynnynge of that boke.*

The wordes of Fortune to the people.
Mine high estate power and auctoritie,
If ye ne know, enserche and ye shall spy,
That riches, worship, welth, and dignitie,
Joy, rest, and peace, and all thyng fynally,
That any pleasure or profit may come by

To mannes comfort, ayde, and sustinaunce,
Is all at my deuyse and ordinaunce.

Without my fauour there is nothyng wonne.
Many a matter haue I brought at last,
To good conclusion, that fondly was begonne:
And many a purpose, bounden sure and fast
With wise prouision, I haue ouercast.

Without good lappe there may no wit suffice;
Better is to be fortunate than wyse.

And therefore hath theré some men bene or this,
My deadly foes and written many a boke,
To my dispraise. And other cause there nys,
But for me list not frendly on them loke.
Thus lyke the fox they fare that once forsoke,
The pleasaunt grapes, and gan for to defy them,
Because he lept and yet could not come by them.

But let them write theyr labour is in vayne.
For well ye wote, myrth, honour, and richesse,
Much better is than penury and payne.
The nedy wretch that lingereth in distresse,
Without myne helpe is euer comfortlesse,
A very burden odious and loth
To all the warld and eke to him selfe both.

But he that by my fauour may ascende,
To mighty power and excellent degree,
A common wele to gouerne and defende,
O in how blist condicion standeth he:
Him self in honour and felicity,
And offer that, may farther and increase,
A region hole in ioyfull rest and peace.

Now in this poynt there is no more to say,
Eche man hath of him self the gouernaunce.
Let every wight than folowe his owne way,
And he that out of pouertee and mischaunce,
List for to liue, and wyll him selfe enhaunce,
In wealth and richesse, come forth and wayte on me:
And he that wyll be a beggar, let hym be.

THOMAS MORE to them that trust in Fortune.

Thou that are prowde of honour shape or kynne,
That hepest vp this wretched worldes treasure,
Thy fingers shrined with gold, thy tawny skynne
With fresh apparyle garnished out of measure,
And wenest to haue fortune at thy pleasure,
Cast vp thyne eye, and loke how slipper chaunce
Illudeth her men with chaunge and varyaunce.

Sometyme she loketh as lously fayre and bright,
As goodly Venus mother of Cupyde.
She becketh and she smileth on euery wight;
But this chere fayned, may not long abide;
There cometh a cloude, and farewell all our pryde.
Like any serpent she beginneth to swell,
And looketh as fierce as any fury of hell.

Yet for all that we brötle men are fayne,
(So wretched is our nature and so blynde)
As soone as Fortune list to laugh agayne,
With fayre countenaunce and disceitfull mynde,
To crouche and knele and gape after the wynde,
Not one or twayne but thousandes in a rout,
Lyke swarmyng bees come flickeryng her aboute.

Then as a bayte she bryngeth forth her ware,
Siluer, gold, riche perle, and precious stone:
On whiche the mased people gase and stare,

And gape therefore, as dogges doe for the bone.
Fortune at them laugheth, and in her tröne
Amyd her treasure and waneryng rychesse,
Prowdly she houeth as lady and empresse.

Fast by her syde doth very labour stand,
Pale fere also, and sorow all bewept,
Disdayn and hatred on that other hand,
Eke restles watche fro slepe with trauayle kept;
His eyes drowsy and loking as he slept.
Before her standeth daunger and enuy,
Flattery, dysceyt, mischiese and tiranny.

About her commeth all the world to begge.
He asketh lande, and he to pas would bryng,
This toye and that, and all not worth an egge:
He would in loue prosper aboute all thyng:
He kneleth downe and would be made a kyng;
He forceth not so he may money haue,
Though all the worlde accompt hym for a knaue.

Lo thus ye see diuers heddies, diuers wittes;
Fortune alone as diuers as they all,
Vnstable here and there among them flittes:
And at auenture downe her giftes fall,
Catch who so may she throweth great and small,
Not to all men, as commeth sonne or dewe,
But for the most part, all among a fewe.

And yet her brotelle giftes long may not last;
He that she gaue them, loketh prowde and hye.
She whirleth about and pluckth away as fast,
And geuth them to an other by and by.
And thus from man to man continually
She vseth to geue and take, and slyly tosse,
One man to wynnyng of an others losse.

And when she robbeth one, down goth his pryde
He wepeth and wayleth and curseth her full sore.
But he that receueth it, on that other syde,
Is glad, and blest her often tymes therefore.
But in a whyle when she loueth hym no more,
She glydeth from hym, and her giftes to.
And he her curseth, as other fooles do.

Alas the folysh people can not cease,
Ne voyd her trayne, tyll they the harme do fele.
About her alway, besely they preace.
But lord how he döth thynk hym self full wele,
That may set once his hande vpon her whele.
He holdeth fast: but vpward as he flieth,
She whippeth her whele about, and there he lyeth.

Thus fell Julius from his mighty power;
Thus fell Darius the worthy kyng of Perse;
Thus fell Alexander the great conquerour;
Thus many mo then I may well reherse.
Thus double fortune, when she lyst reuerse
Her slipper fauour fro them that in her trust,
She fleeth her wey and leyeth them in the dust.

She sodeinly enhaunceth them aloft;
And sodeynly mischeueth all the flocke.
The head that late lay easily and full soft,

HISTORY OF THE ENGLISH LANGUAGE.

In stede of pylows lyeth after on the blocke.
And yet alas the most cruell proude mocke :
The deynthy mowth that ladyes kissed haue,
She bryngeth in the case to kysse a knaue.

In chaungyng of her course, the chaunge shewth this;
Vp starth a knaue, and downe there falth a knight,
The beggar ryche, and the ryche man pore is;
Hatred is turned to loue, loue to despyght;
This is her sport, thus proueth she her myght.
Great boste she maketh yf one be by her power,
Welthy and wretched both within an howre.

Pouertee that of her giftes wyl nothing take,
Wyth mery chere, looketh vppon the prece,
And seeth how fortunes houshold goeth to wrake.
Fast by her standeth the wyse Socrates.
Aristippus, Pythagoras, and many a lese.
Of olde philosophers. And eke agaynst the sonne
Bekyth hym poore Diogenes in his tonne.

With her is Byas, whose cuntry lackt defence,
And whylom of their foes stode so in dout,
That eche man hastely gan to cary thence,
And asked hym why he nought caryed out.
I bere quod he all myne with me about :
Wisdom he ment, not fortunes brotle fees;
For nought he counted his that he might leese.

Heraclitus eke, lyst felowship to kepe
With glad pouertee, Democritus also :
Of which the fyrst can neuer cease but wepe,
To see how thicke the blynded people go,
With labour great to purchase care and wo :
That other laugheth to see the foolysh apes,
Howe earnestly they walk about theyr capes.

Of this poore sect, it is comen vsage,
Onely to take that nature may sustayne,
Banishing cleane all other surplusage,
They be content, and of nothyng complayne.
No nygarde eke is of his good so fayne :
But they more pleasure haue a thousande folde,
The secrete draughtes of nature to beholde.

Set fortunes seruauntes by them and ye wull,
That one is free, that other euer thrall,
That one content, that other neuer full.
That one in suretye, that other lyke to fall.
Who lyst to aduise them bothe, parceyue he shall,
As great difference between them as we see,
Betwixte wretchednes and felicitye.

Nowe haue I shewed you bothe: these whiche ye
lyst,
Stately Fortune, or humble Pouertee :
That is to say, nowe lyeth it in your fyst,
To take here bondage, or free libertee.
But in thys poynte and ye do after me,
Draw you to Fortune, and labour her to please,
If that ye thynke your selfe to well at ease.

And fyrst vppon the louely shall she smile,
And frendly on the cast her wandering eyes,

Embrace the in her armes, and for a whyle,
Put the and kepe the in a foolles paradise :
And foorth with all what so thou lyst deuise,
She wyll the graunt it liberally parhappes :
But for all that beware of after clappes.

Recken you neuer of her fauoure sure :
Ye may in clowds as easily trace an hare,
Or in drye lande cause fishes to endure,
And make the burnyng fyre his heate to spare,
And all thys worlde in compace to forfare,
As her to make by craft or engine stable,
That of her nature is euer variable.

Serue her day and nyght as reuerently,
Vppon thy knees as any seruaunt may,
And in conclusion, that thou shalt winne thereby
Shall not be worth thy seruyce I dare say.
And looke yet what she geueth the to day,
With labour wonne she shall haply to morrow
Pluck it agayne out of thyne hande with sorow.

Wherefore yf thou in suretye lyst to stande,
Take Pouerties parte and let proude Fortune go,
Receyue nothyng that commeth from her hande.
Loue maner and vertue : they be onely tho,
Whiche double Fortune may not take the fro.
Then mayst thou boldly defy her turnyng chaunce :
She can the neyther hynder nor auance.

But and thou wylt nedes medle with her treasure,
Trust not therein, and spende it liberally.
Beare the not proude; nor take not out of measure;
Bylde not thyne house on heyth vp in the skye;
None falleth farre, but he that climbeth hye :
Remember nature sent the lyther bare;
The gyftes of Fortune count them borrowed ware

THOMAS MORE to them that seke Fortune

Who so delyteth to prouen and assay,
Of waveryng Fortune the vncertayne lot,
If that the aunswere please you not alway,
Blame ye not me : for I commaunde you not,
Fortune to trust, and eke full well ye wot,
I haue of her no brydle in my fist,
She renneth loose, and turneth where she lyst.

The rolyng dyse in whom your lucke doth stande,
With whose vnhappy chaunce ye be so wroth,
Ye knowe your selfe came neuer in myne hande;
Lo in this ponde be fyshe and frogges both.
Cast in your nette : but be you liefes or lothe,
Hold you content as Fortune lyst assyne :
For it is your owne fishyng and not myne.

And though in one chaunce Fortune you offend,
Grudge not there at, but beare a mery face,
In many an other she shall it amende.
There is no manne so farre out of her grace,
But he sometyme hath comfort and solace :
Ne none agayne so farre foorth in her fauour,
That is full satisfyed with her behauiour.

Fortune is stately, solemne, prowde, and hye,
 And rychesse geueth, to haue seruyce therefore.
 The nedy begger catcheth an halfpenny,
 Some manne a thousande pounce, some lesse, some more.
 But for all that she kepeth euer in store,
 From euery manne some parcell of his wyll,
 That he may pray therfore and serue her styll.
 Some manne hath good, but chyldren hath he none;
 Some man hath both, but he can get none health;
 Some hath al thre; but vp to honours trone
 Can he not crepe by no maner of stelth.
 To some she sendeth: children, ryches, welthe,
 Honour, woorschyp, and reuerence all hys lyfe:
 But yet she pyncheth hym with a shrewde wyfe.

Then forasmuch as it is Fortunes guyse,
 To graunt no manne all thyng that he wyll axe,
 But as her selfe lyst order and deuysse,
 Doth euery manne his part diuide and tax,
 I counsaile you eche one trusse vp your packes,
 And take no thyng at all, or be content
 With such rewarde as fortune hath you sent.

All thynges in this boke that ye shall rede,
 Doe as ye lyst, there shall no manne you bynde,
 Them to beleue, as surely as your crede.
 But notwithstanding certes in my mynde,
 I durst well swere, as true ye shall them fynde,
 In euery poynt eche answer by and by,
 As are the iudgementes of astronomye.

THE DESCRIPCION OF RICHARD THE THIRDE.

Richarde the third sonne, of whom we nowe entreate, was in witte and courage egall with either of them, in bodye and prowesse farre vnder them bothe, little of stature, ill fetured of limmes, croke backed, his left shoulder much higher than his right, hard fauoured of visage, and such as is in states called warlye, in other menne otherwise; he was malicious, wrathfull, enuious, and from afore his birth, euer frowarde. It is for trouth reported, that the duches his mother had so much a doe in her trauaile, that shee coulde not bee deliuered of him vncutte: and that hee came into the worlde with the feete forwarde, as menne bee borne outwarde, and (as the fame runneth) also not vntothed, whither menne of hatred reporte aboute the trouthe, or elles that nature chaunged her course in hys beginninge, whiche in the course of his lyfe many thynges vnnaturallie committed. None euill captaine was hee in the warre, as to whiche his disposicion was more metely then for peace. Sundrye victories hadde hee, and sometime ouerthrowes, but neuer in defaulte as for his owne parson, either of hardnesse or polytike order; free was hee called of dyspence, and sommewhat aboute hys power liberall, with large giftes hee get him vnstedfaste frendeshippe, for whiche hee was fain to pil and spoyle in other places, and get him stedfast hatred. Hee was close and secrete, a deepe dissimuler, lowlye of counteynaunce, arrogant of heart, outwardly coumpinable where he inwardely hated, not letting to kisse whome hee thoughte to kyll: dispitious and cruell, not for euill will alway, but after for ambicion, and either for the suretie or encrease of his estate. Frende and foe was muche what indifferent, where his aduauntage grew, he spared no mans deathe, whose life withstoode his purpose. He slewe with his owne handes king Henry the sixt, being prisoner in the Tower, as menne constantly saye, and that without commaundement or knowlege of the king, whiche woulde vndoubtedly, yf he had entended that thinge, haue appointed that boocherly office to some other then his owne borne brother.

Somme wise menne also weene, that his drift couertly conuayde, lacked not in helping furth his brother of Clarence to his death: whiche hee resisted openly, howbeit somewhat (as menne deme) more faintly than he that wer hartely minded to his welth. And they that thus deme, think that he long time in king Edwardes life, forethought to be king in that case the king his brother (whose life hee looked that euill dyete shoulde shorten) shoulde happen to decease (as in dede he did) while his children wer yonge. And thei deme, that for thys intente he was gladde of his brothers death the duke of Clarence, whose life must nedes haue hindered hym so entendinge, whither the same duke of Clarence, hadde kepte him true to his nephew the yonge king, or enterprised to be kyng himselfe. But of al this point, is there no certaintie, and whoso diuineth vpon coniectures, maye as wel shote to farre as too short. Howbeit this haue I by credible informacion learned, that the selfe nighte in whiche kynge Edward died, one Mystlebrooke longe ere mornynge, came in greate haste to the house of one Pottyer dwellyng in Reddecrosse strete without Crepulgate: and when he was with hastye rappyng quickly letten in, hee shewed vnto Pottyer that kynge Edward was departed. By my trouthe manne quod Pottyer then wyll my mayster the duke of Gloucester bee kynge. What cause hee hadde soo to thynke harde it is to saye, whyther hee being toward him, anye thyng knewe that hee suche thyng purposed, or otherwyse had anye inkelynge thereof: for hee was not likelye to speake it of noughte.

But nowe to returne to the course of this hystorie; were it that the duke of Gloucester hadde of old fore-minded this conclusion, or was nowe at erste thereunto moued, and putte in hope by the occasion of the tender age of the younge princes, his nephues (as opportunitie and lykelyhooode of spede putteth a manne in courage of that hee neuer entended) certayn is it that hee contriued theyr destruccion, with the vsurpacion of the regal dignitie vpon hymselfe. And for as muche as hee well wiste and holpe to mayntayn, a long continued grudge and hearte brennyng betwene the quenes kinred and the kinges blood eyther partye enuyng others authoritye, hee nowe thought that their deuision shoulde bee (as it was in dede) a fortherlye begynnynge to the pursuite of his intente, and a sure ground for the

foundacion of al his building yf he might firste vnder the pretext of reuengynge of olde displeasure, abuse the anger and ygnorance of the one partie, to the destruction of the tother : and then wyne to his purpose as manye as he coude : and those that coude not be wonne, myght be loste ere they looked therefore. For of one thyng was hee certayne, that if his entente were perceiued, he shold soone haue made peace betwene the bothe parties with his owne bloude.

Kynge Edward in his life, albeit that this discepcion beetwene hys frendes somewhat yrked hym : yet in his good health he somewhat the lesse regarded it, because hee thought whatsoeuer busines shoulde falle betwene them, hymselfe should alway be hable to rule bothe the parties.

But in his last sicknesse, when hee receiued his naturall strengthe soo sore enfebled, that hee dyspayred all recouerye, then hee consyderynge the youthe of his chylde, albeit hee nothyng lesse mistrusted then that that happened, yet well forseynge that manye harmes myghte growe by theyr debate, whyle the youth of hys children should lacke discrecion of themself and good counsaile of their frendes, of whiche either party shold counsaile for their owne commoditie and rather by pleasaunte aduise too wyne themselfe fauour, then by profitable aduertisemente to do the children good, he called some of them before him that were at variaunce, and in especyall the lorde marques Dorsette the quenes sonne by her fyrste housebande, and Richarde the lord Hastynges, a noble man, than lorde chaumberlayne agayne whome the quene specially grudged, for the great fauoure the kyng bare hym, and also for that shee thoughte hym secretly familer with the kyng in wanton compaignye. Her kynred also bare hym sore, as well for that the kyng hadde made hym captayne of Calyce (whiche office the lorde Ryuers, brother to the quene, claimed of the kinges former promyse) as for diuerse other great giftes which hee receyued, that they loked for. When these lordes with diuerse other of both the parties were comme in presence, the kyng lyfinge vppe himselfe and vnder sette with pillowes, as it is reported on this wyse sayd vnto them, My lordes, my dere kinsmenne and alies, in what plichte I lye you see, and I feele. By whiche the lesse whyle I looke to lyue with you, the more depelye am I moued to care in what case I leaue you, for such as I leaue you, suche bee my children lyke to fynde you. Whiche if they shoulde (that Godde forbydde) fynde you at variaunce, myghte happe to fall themselfe at warre ere their discrecion woulde serue to sette you at peace. Ye see their youthe, of whiche I reckon the onely suretie to reste in youre concord. For it suffiseth not that al you loue them, yf eche of you hate other. If they wer menne, your faithfulnessse happelye woulde suffise. But childehood must be maintained by mens authoritye, and slipper youth vnderpropped with elder counsaile, which neither they can haue, but ye geue it, nor ye geue it, yf ye gree not. For wher eche laboureth to breake that the other maketh, and for hatred of ech of others parson, impugneth eche others counsaile, there must it nedes bee long ere anye good conclusion goe forward. And also while either partye laboureth to be chiefe, flattery shall haue more place then plaine and faithfull aduise, of whyche muste nedes ensue the euill bringing vppe of the prynce, whose mynd in tender youth infect, shal redily fal to mischief and riot, and drawe down with this noble realme to ruine, but if grace turn him to wisdom : which if God send, then thei that by euill menes before pleased him best, shal after fall farthest out of fauour, so that euer at length euil drifte dreue to nought, and good plain wayes prosper. Great variaunce hath ther long bene betwene you, not alway for great causes. Sometime a thing right wel intended, our misconstruccion turneth vnto worse or a smal displeasure done vs, eyther our owne affection or euil tongues agreueth. But this wote I well, ye neuer had so great cause of hatred as ye haue of loue. That we be al men, that we be christen men, this shall I leaue for prechers to tel you (and yet I wote nere whither any preachers wordes ought more to moue you, then his that is by and by gooyng to the place that thei all preache of). But this shal I desire you to remember, that the one parte of you is of my bloode, the other of myne alies, and eche of yow with other, eyther of kinred or affinitie, whiche spirytually kynred of affynity, if the sacramentes of Christes churche beare that weyghte with vs that woulde Godde thei did, shoulde no lesse moue vs to charite, then the respecte of fleshlye consanguinitye. Oure Lorde forbydde, that you loue together the worse, for the selfe cause that you ought to loue the better. And yet that happeneth. And no where fynde wee so deadlye debate, as amonge them whyche by nature and lawe moste oughte to agree together. Suche a pestilente serpente is ambition and desyre of vaine glorye and souerainty, whiche amonge states where he once entreth crepeth forth so farre, tyll with deuision and variaunce hee turneth all to mischief. Firste longing to be nexte the best, afterwarde egall with the beste, and at laste chiefe and aboue the beste. Of which immoderate appetite of woorship, and thereby of debate and dissencion what losse, what sorowe, what trouble hath within these fewe yeares growen in this realme, I praye Godde as well forgeate as wee well remember.

Whiche thynges yf I could as well haue foresene, as I haue with my more payne than pleasure proued, by Goddes blessed Ladie (that was euer his othe) I woulde neuer haue won the courtesye of mennes knees with the losse of soo many heades. But sithen thynges passed cannot be gaine called, muche oughte wee the more beware, by what occasion we haue taken soo greates hurte afore, that we estesoones fall not in that occasion agayne. Nowe be those griefes passed, and all is (Godde be thanked) quiete, and likeli righte wel to prosper in wealthfull peace vnder youre coseyns my children, if Godde sende them life and you loue. Of whyche twoo thynges, the lesse losse wer they by whome thoughte Godde dydde hys pleasure, yet shoulde the realme alway finde kinges and paraduenture as good kinges. But yf you among youre selfe in a chilles reygne fall at debate, many a good man shall perish and happely he tr, and ye to,

ere thys land finde peace again. Wherefore in these last wordes that euer I looke to speak with you: I exhort you and require you al, for the loue that you haue euer borne to me, for the loue that I haue euer born to you, for the loue that our Lord beareth to vs all, from this time forward, all grieues forgotten, eche of you loue other. Whiche I verelye truste you will, if ye any thing earthly regard, either Godde or your king, affinitie or kinred, this realme, your owne country, or your owne surety. And therewithal the king no longer enduring to sitte vp, laide him down on his right side, his face towarde them: and none was there present that coulde refrain from weping. But the lordes recomforting him with as good wordes as they could, and answering for the time as thei thought to stand with his pleasure, there in his presence (as by their wordes appered) ech forgaue other, and ioyned their hands together, when (as it after appeared by their dedes) their hearts wer far a sonder. As sone as the king was departed, the noble prince his sonne drew toward London, which at the time of his decease, kept his houshold at Ludlow in Wales. Which country being far of from the law and recourse to iustice, was begon to be farre oute of good wyll and waxen wild, robbers and riuers walking at libertie vncorrected. And for this encheason the prince was in the life of his father sente thither, to the end that the authoritie of his presence, should refraine euill disposed parsons fro the boldnes of their former outrages, to the gouernaunce and ordering of this yong prince at his sending thither, was there appointed Sir Antony Wodville lord Riuers and brother vnto the quene, a right honourable man, as valiaunte of hande politike in counsaile. Adioyned wer there vnto him other of the same partie, and in effect euery one as he was nerest of kin vnto the quene, so was planted next about the prince. That drifte by the quene not vnwisely deuised, whereby her bloode mighte of youth be rooted in the princes fauor, the duke of Gloucester turned vnto their destruccion, and vpon that grounde set the foundation of all his vnhappy building. For whom soeuer he perceiued, either at variance with them, or bearing himself their fauor, hee brake vnto them, some by mouth, som by writing and secret messengers, that it neyther was reason nor in any wise to be suffered, that the yong king their master and kinsmanne, should bee in the handes and custodie of his mothers kinred, sequestred in maner from theyr compani and attendance, of which eueri one ought him as faithful seruice as they, and manye of them far more honorable part of kin then his mothers side: whose blood (quod he) sauing the kinges pleasure, was ful vnmetely to be matched with his: whiche nowe to be as who say remoued from the kyng, and the lesse noble to be left aboute him, is (quod he) neither honorable to hys magestie, nor vnto vs, and also to his grace no surety to haue the mightiest of his frendes from him, and vnto vs no little ieopardy, to suffer our wellproued euill willers, to grow in ouergret authoritie with the prince in youth, namely which is lighte of beliefe and sone perswaded. Ye remember I trow king Edward himself, albeit he was a manne of age and of discrecion, yet was he in manye thynges ruled by the bende, more then stode either with his honour, or our profite, or with the commoditie of any manne els, except onely the immoderate aduancement of them selfe. Whiche whither they sorer thirsted after their owne weale, or our woe, it wer hard I wene to gesse. And if some folkes frendship had not holden better place with the king then any respect of kinred, thei might peraduenture easily haue be trapped and brought to confusion somme of vs ere this. Why not as easily as they haue done some other alreadye, as neere of his royal bloode as we. But our Lord hath wrought his wil, and thanke be to his grace that peril is paste. Howe be it as great is growing, yf wee suffer this yonge kyng in oure enemyes hande, whiche without his wyttyng, might abuse the name of his commaundement, to ani of our vndoing, which thyng God and good prouision forbyd. Of which good prouision none of us hath any thing the less nede, for the late made attonement, in whiche the kinges pleasure hadde more place then the parties willes. Nor none of vs I beleue is so vnwyse, ouersone to truste a newe frende made of an olde foe, or to think that an honerly kindnes, sodainely contract in one houre continued, yet scant a fortnight, shold be deper settled in their stomackes, then a long accustomed malice many yeres rooted.

With these wordes and writynges and suche other, the duke of Gloucester sone set a fyre them that were of themself ethe to kindle, and in especiall twaync, Edward duke of Buckingham, and Richarde lorde Hastings and chaumberlayn, both men of honour and of great power. The tone by longe succession from his ancestrie, the tother by his office and the kinges fauor. These two not bearing eche to other so muche loue, as hatred bothe vnto the quenes parte: in this poynte accorded together wyth the duke of Gloucester, thatt hey wolde vtterlye amoue fro the kynges company, all his mothers frendes, vnder the name of their enemyes. Vpon this concluded, the duke of Gloucester vnderstandyng, that the lordes whiche at that tyme were aboute the kyng, entended to bryng him vppe to his coronacion, accompanied with suche power of theyr frendes, that it shoulde bee harde for hym to brynge his purpose to passe, without the gathering and great assemble of people and in maner of open warre, whereof the ende he wiste was doubtuous, and in which the kyng being on their side, his part shoulde haue the face and name of a rebellion: he secretly therefore by diuers meanes, caused the quene to be perswaded and brought in the mynd, that it neither wer nede, and also shold be ieopardous, the king to come vp strong. For where as nowe euery lorde loued other, and none other thing studyed vppon, but aboute the coronacion and honoure of the king: if the lordes of her kinred shold assemble in the kinges name muche people, thei shoulde geue the lordes atwixte whome and them hadde bene sommetyne debate, to feare and suspecte, este they shoulde gather thys people, not for the kynges sauegarde whome no manne empugned, but for theyr destruccion, hauyng more regarde to their olde variaunce, then their newe attonement. For whiche cause thei shoulde

assemble on the other partie muche people agayne for their defence, whose power she wyste wel farre stretched. And thus should all the realme fall on a rore. And of al the hurte that therof should ensue, which was likely not to be litle, and the most harme there like to fal wher she lest would, all the worlde woulde put her and her kinred in the wyght, and say that thei had vnwiselye, and vntrewlye also, broken the amitie and peace that the kyng her husband so prudentlye made betwene hys kinne and hers in his death bed, and whiche the other party faithfully obserued.

The quene being in this wise perswaded, suche woorde sente vnto her sonne, and vnto her brother being aboute the kyng, and ouer that the duke of Gloucester hymselfe and other lordes the chiefe of hys bende, wrote vnto the kyng soo reuerentlye, and to the queenes frendes, there soo louyngelye, that they nothyng earthelye mystrustyng, broughte the kyng vppe in greate haste, not in good spede, with a sober coumpanye. Nowe was the king in his waye to London gone, from Northampton, when these dukes of Gloucester and Buckyngham came thither. Where remained behynd, the lorde Ryuers the kynges vncl, entending on the morowe to folow the kyng, and bee with hym at Stonye Stratford, xx miles thence, earely or hee departed. So was there made that nyghte muche frendely chere betwene these dukes and the lord Riuers a greate while. But incontinente after that they were oppenlye with greate courtesye departed, and the lorde Riuers lodged, the dukes secretlye, with a fewe of their moste priue frendes, sette them downe in counsaile, wherein they spent a great parte of the nyght. And at their risinge in the dawning of the day, thei sent about priuily to their seruantes in their innes and lodgynges about, geuinge them commaundemente to make them selfe shortly readye, for their lordes wer to horse-backward. Vppon whiche messages, manye of their folke were attendaunt, when manye of the lorde Riuers seruantes were vnreadye. Nowe hadde these dukes taken also into their custodye the kayes of the inne, that none shoulde passe forth without theyr licence.

And ouer this in the hyghe waye towarde Stonye Stratforde where the kyng laye, they hadde beestowed certayne of theyr folke, that shoulde send backe agayne, and compell to retourne, anye manne that were gotten oute of Northampton toward Stonye Stratforde, tyll they should geue other lycence. For as muche as the dukes themselfe entended for the shewe of theire dylygence, to bee the fyrste that shoulde that daye attende vppon the kynges highnesse out of that towne: thus bare they folke in hande. But when the lorde Ryuers vnderstode the gates closed, and the wayes on euerye side besette, neyther hys seruantes nor hymselfe suffered to go oute, parceiuyng well so greate a thyng without his knowledge not begun for noughte, comparyng this maner present with this last nightes chere, in so fewe houres so gret a chaunge marueylouslye misliked. How be it sithe hee coulde not geat awaye, and keepe hymselfe close, hee woulde not, leste he shoulde seeme to hyde hymselfe for some secret feare of his owne faulte, whereof he saw no such cause in hym self: he determined vppon the suretie of his own conscience, to goe boldelye to them, and inquire what thys matter myghte meane. Whome as soone as they sawe, they beganne to quarrel with hym, and saye, that hee intended to sette distaunce betwene the kyng and them, and to bryng them to confusion, but it shoulde not lye in hys power. And when hee beganne (as he was a very well spoken manne) in goodly wise to excuse himself, they taryed not the ende of his aunswere, but shortly tooke him and putte him in warde, and that done, forthwyth wente to horsebacke, and tooke the waye to Stonye Stratforde. Where they founde the kinge with his companie readye to leape on horsebacke, and departe forward, to leaue that lodging for them, because it was to streight for bothe coumpanies. And as sone as they came in his presence, they lighte adowne with all their companie aboute them. To whome the duke of Buckyngham saide, goe afore gentlemen and yeomen, kepe youre rowmes. And thus in goodly arraye, thei came to the kinge, and on theire knees in very humble wise, salued his grace; whiche receyued them in very ioyous and amiable maner, nothinge earthlye knowing nor mistrustinge as yet. But euen by and by in his presence, they piked a quarell to the lorde Richard Graye, the kynges other brother by his mother, sayinge that hee with the lorde marques his brother and the lorde Riuers his vncl, hadde coumpassed to rule the kinge and the realme, and to sette variaunce among the states, and to subdewe and destroye the noble blood of the realm. Toward the accomplishinge whereof, they sayde that the lorde Marques hadde entered into the Tower of London, and thence taken out the kinges treasure, and sent menne to the sea. All whiche thinge these dukes wiste well were done for good purposes and necessari by the whole counsaile at London, sauing that sommewhat thei must sai. Vnto whiche wordes, the king aunswere, what my brother Marques hath done I cannot saie. But in good faith I dare well aunswere for myne vncl Riuers and my brother here, that thei be innocent of any such matters. Ye my liege quod the duke of Buckyngham thei haue kept theire dealing in these matters farre fro the knowledge of your good grace. And forthwith thei arrested the lord Richarde and Sir Thomas Waughan knyghte, in the kinges presence, and broughte the king and all backe vnto Northampton, where they tooke agayne further counsaile. And there they sent awaie from the kinge whom it pleased them, and sette newe seruantes aboute him, suche as lyked better them than him. At which dealinge hee wepte and was nothing contente, but it booted not. And at dyner the duke of Gloucester sente a dish from his owne table to the lord Riuers, prayinge him to bee of good chere, all should be well inough. And he thanked the duke, and prayed the messenger to beare it to his nephew the lorde Richard with the same message for his comfort, who he thought had more nede of comfort, as one to whom such aduersitie was straunge. But hymself had been al his dayes in vre therewith, and therefore coulde beare it the better. But for al this coumfortable courtesye of the duke

of Gloucester, he sent the lord Rivers and the lord Richarde with Sir Thomas Vaughan into the Northe countrey into diuers places to prison, and afterward al to Pomfrait, where they were in conclusion beheaded.

A letter written with a cole by SIR THOMAS MORE to hys doughter maistres Margaret Roper, within a whyle after he was prisoner in the Towre.

Myne owne good doughter, our Lorde be thanked I am in good helthe of bodye, and in good quiet of minde: and of worldly thynges I no more desyer then I haue. I beseche hym make you all mery in the hope of heauen. And such thynges as I somewhat longed to talke with you all, concerning the worlde to come, our Lorde put them into your myndes, as I truste he dothe, and better to, by hys holy Spirite: who blesse you and preserue you all. Written wyth a cole by your tender louing father, who in hys pore prayers forgetteth none of you all, nor your babes, nor your nurses, nor your good husbendes, nor your good husbendes shrewde wyues, nor your fathers shrewde wyfe neither, nor our other frendes. And thus fare ye hartely well for lacke of paper.

THOMAS MORE, knight.

Two short balletes which SIR THOMAS MORE made for hys pastime while he was prisoner in the Tower of London.

LEWYS the ~~lost~~ lover.

Ey flatering fortune, loke thou neuer so fayre,
Or neuer so plesantly begin to smile,
As though thou wouldst my ruine all repayre,
During my life thou shalt me not begile.
Trust shall I God, to entre in a while
Hys hauen or heauen, sure and vniforme.
Euer after thy calme, loke I for a storme.

DAVY the dyer.

Long was I, Lady Lucke, your seruing man,
And now haue lost agayne all that I gat,
Wherfore whan I thinke on you nowe and than,
And in my mynde remember this and that,
Ye may not blame me though I beshrew your cat,
But in fayth I blesse you agayne a thousand times,
For lending me now some laysure to make rymcs.

At the same time with Sir Thomas More lived Skelton, the poet laureate of Henry VIII. from whose works it seems proper to insert a few stanzas, though he cannot be said to have attained great elegance of language.

The Prologue to the BOUGE OF COURTE.

In Autumpne whan the sonne in vyrgyne
By radyante hete enryped hath our corne;
Whan Luna, full of mutabylyte,
As emperes the dyademe hath worne
Of our pole artyke, smyllynge halfe in scorne
At our foly, and our vnstedfastnesse,
The time whan Mars to warre hym dyd dres;
I callynge to mynde the greate auctoryte
Of poetes olde, whiche full craftely
Vnder as couerte termes as coulede be
Can touche a trouth, and cloke subtylly
With fresshe vtteraunce full senteneyously
Dyuerse in style; some spared not vyce to wryte,
Some of mortalitie nobly dyd endyte;
Whereby, I rede, theyr renome and theyr fame
Maye neuer dye, but euermore endure;
I was sore moued to aforse the same;

But ignoraunce full soone dyde me dyscure,
And shewed that in this arte I was not sure;
For to illumine she sayd I was to dulle,
Aduysynge me my penne awaye to pulle
And not to wryte for he so wyll atteyne
Exceedyng farther than his connyng is;
His heed maye be harde, but feble his brayne:
Yet haue I knowen suche er this.
But of reproche surely he maye not mys,
That clymmeth hyer than he may fotinge haue,
What and he slyde downe, who shall him saue?
Thus vp and downe my mynde was drawn and cast,
That I ne wyste what to do was beste,
So sore enwored, that I was at the laste,
Enforced to slepe, and for to take some reste,
And to lye downe as soone as I me dreste,
At Harwyche porte slumbrynge as I laye
In myne hostes house called Powers keye.

Barclay wrote in the first quarter of the sixteenth century.¹ His chief work is the *Ship of Fooles*, of which the following extract will show his style.

¹ Altered from 'Barclay wrote about 1550,' and (after Todd) thrown back accordingly. In Johnson, Barclay follows Surrey.

Of Mockers and Scorners, and false Accusers.

O heartless fooles, haste here to our doctrine,
 Leaue off the wayes of your enormitie,
 Enforce you to my preceptes to encline,
 For here shall I shewe you good and veritie:
 Encline, and ye finde shall great prosperitie,
 Ensuing the doctrine of our fathers olde,
 And godly lawes in valour worth great golde.

Who that will followe the graces manyfolde
 Which are in vertue, shall finde auancement:
 Wherefore ye fooles that in your sinne are bolde,
 Ensue ye wisdom, and leaue your lewde intent.
 Wisdom is the way of men most excellent:
 Therefore haue done, and shortly spede your pace,
 To quaynt your self and company with grace.

Learne what is vertue, therein is great solace,
 Learne what is truth, sadnes and prudence,
 Let grutch be gone, and grauitie purchase,
 Forsake your folly and inconuenience,
 Cease to be fooles, and ay to sue offence,
 Followe ye vertue, chiefe roote of godlynes,
 For it and wisdom is ground of clenlynes.

Wisdom and vertue two things are doubtles,
 Whiche man endueth with honour speciall,
 But suche heartes as slepe in foolishnes
 Knoweth nothing, and will nought know at all:
 But in this little barge in principall
 All foolish mockers I purpose to repreue,
 Clawe he his backe that feeleth itche or greue.

Mockers and scorners that are harde of beleue,
 With a rough combe here will I clawe and grate,
 To proue if they will from their vice remeue,
 And leaue their folly, which causeth great debate:
 Suche caytiues spare neyther poore man nor estate,
 And where their selfe are moste worthy derision,
 Other men to scorne is all their most condition.

Yet are mo fooles of this abusion,
 Whiche of wise men despiseth the doctrine,
 With mowes, mockes, scorne, and collusion,
 Rewarding rebukes for their good discipline:
 Shewe to such wisdom, yet shall they not encline
 Unto the same, but set nothing therby,
 But mocke thy doctrine, still or openly.

So in the worlde it appeareth commonly,
 That who that will a foole rebuke or blame,
 A mocke or mowe shall he haue by and by:
 Thus in derision haue fooles their speciall game.
 Correct a wise man that would eschue ill name,
 And sayne would learne, and his lewde life amende,
 And to thy wordes he gladly shall intende.

If by misfortune a rightwise man offende,
 He gladly suffereth a iuste correction,
 And him that him teacheth taketh for his frende,
 Him selfe putting mekely unto subiection,
 Following his preceptes and good direction:
 But yf that one a foole rebuke or blame,
 He shall his teacher hate, slaunder, and diffame.

Howbeit his wordes oft turne to his own shame,
 And his owne dartes retourne to him agayne,
 And so is he sore wounded with the same,
 And in wo endeth, great misery, and payne.
 It also proued full often is certayne,
 That they that on mockers alway their mindes cast,
 Shall of all other be mocked at the last.

He that goeth right, stedfast, sure, and fast,
 May him well mocke that goeth halting and lame,
 And he that is white may well his scornes cast,
 Agaynst a man of Inde: but no man ought to blame
 Anothers vice, while he vseth the same.
 But who that of sinne is cleane in deede and thought,
 May him well scorne whose liuing is starke nought.

The scornes of Naball full dere should haue been bought.
 If Abigayl his wife, discrete and sage,
 Had not by kindnes right crafty meanes sought,
 The wrath of Dauid to temper and asswage.
 Hath not two beares in their fury and rage
 Two and fortie children rent and torne,
 For they the prophete Helyseus did scorne?

So might they curse the time that they were borne,
 For their mocking of this prophete diuine:
 So many other of this sorte often mourne
 For their lewde mockes, and fall into ruine.
 Thus is it foly for wise men to encline
 To this lewde flocke of fooles, for see thou shall
 Them moste scorning that are most bad of all.

The Lenuoy of Barclay to the Fooles.

Ye mocking fooles that in scorne set your ioy,
 Proudly despising Gods punishment:

Take ye example by Cham the sonne of Noy,
 Which laughed his father vnto derision.

Of the wits that flourished in the reign of *Henry VIII.* none have been more frequently celebrated than the *Earl of Surrey*; and this history would therefore have been imperfect without some specimens of his works, which yet it is not easy to distinguish from those of Sir *Thomas Wyat* and others, with which they are confounded in the edition that has fallen into my hands. The three first are, I believe, *Surrey's*; the rest, being of the same age, are selected, some as examples of different measures, and one as the oldest composition which I have found in blank verse.

Description of Spring, wherein eche thing renewes, save only the lover.

The soote season that bud and bloome fourth brings,
 With grene hath cladde the hyll, and eke the vale;
 The nightingall with fethers new she singes;
 The turtle to her mate hath told her tale:
 Somer is come, for every spray now springes,
 The hart hatf hunge hys olde head on the pale,
 The bucke in brake his winter coate he flynges:

The fishes flete with newe repayred scale:
 The adder all her slough away she flynges;
 The swift swallow pursueth the flyes smale,
 The busy bee her honey now she mynges;
 Winter is worne that was the floures bale.
 And thus I see among these pleasant thynges
 Echē care decayes, and yet my sorrow sprynges

Description of the restless estate of a lover.

When youth had led me half the race,
 That Cupides scourge had made me runne;
 I loked back to mete the place,
 From whence my weary course begunne:
 And then I saw howe my desyre
 By guiding ill had lett my waye;
 Myne eyne, to greedy of theyre hyre,
 Had made me lose a better prey.
 For when in sighes I spent the day,
 And could not cloake my grief with game;
 The boyling smoke dyd still bewray
 The persant heat of secret flame:
 And when salt teares did bayne my breast,
 Where love his pleasant traynes had sown,
 The fruit thereof the fruytes opprest,
 Or that the buddes were spronge and blowne.

And when myne eyen dyd still pursue
 The flying chase of theyre request;
 Theyre greedy looks dyd oft renew
 The hydden wounde within my breste.
 When every loke these cheeks might stayne,
 From dedly pale to glowing red;
 By outward signes appeared playne,
 The wo wherewith my hart was fed.
 But all to late Love learneth me
 To paynt all kynd of colours new;
 To blynd theyre eyes that else should see
 My sparkled chekes with Cupids hew.
 And now the covert brest I clame,
 That worships Cupide secretly;
 And nourisheth hys sacred flame,
 From whence no blasing sparks do flye.

Description of the fickle Affections, Pangs, and Sleightes of Love.

Such wayward wayes hath Love, that most in part
 discord
 Our willes do stand, whereby our hartes but seldom do
 accord:
 Deceyte is hys delighte, and to begyle and moeke
 The simple hartes which he doth strike with froward divers
 stroke.
 He causeth th' one to rage with golden burning darte,
 And doth alay, with leaden cold, again the others harte.
 Whose gleames of burning fyre, and easy sparkes of flame,
 In balance of unequal weyght he pondereth by ame.
 From easye ford, where I myghte wade and pass full
 well,
 He me withdrawes and doth me drive into a dark depe hell:
 And me withholdes where I am calde and offred place,
 And willes, that still my mortal foe I do beseke of grace;
 And lettes me to pursue a conquest welnere wonne
 To follow where my paynes were spilt, ere that my sute
 begunne.
 Lo, by these rules I know how soon a hart may turne
 From warre to peace, from truce to stryfe, and so agayne
 returne.
 I know how to convert my will in others lust,
 Of little stuffe unto my self to weave a webbe of trust:
 And how to hyde my harme with soft dyssembled chere,
 When in my face the painted thoughtes would outwardly
 appeare.

I know how that the bloud forsakes the face for dred,
 And how by shame it staynes agayne the chekes with
 flamying red:
 I know under the grene the serpent how it lurkes:
 The hammer of the restless forge I wote eke how it
 workes.
 I know and can by roate the tale that I would tell;
 But ofte the woordes come fourth awrye of him that loveth
 well.
 I know in heate and colde the lover how he shakes,
 In synging how he can complayne, in sleeping how he
 wakes.
 To languish without ache, sicklesse for to consume,
 A thousand thynges for to devyse, resolvyng all in fume;
 And though he lyst to see his ladyes grace full sore
 Such pleasure as delyghts his eye floth not his helthe
 restore.
 I know to seke the tracte of my desyred foe,
 And fere to fynde that I do seek; but chiefly this I know;
 That lovers must transfourme into the thyng beloved,
 And live (alas! who could believe?) with sprite from lyfe
 removed.
 I knowe in harty sighes and laughthers of the spleene,
 At once to chaunge my state, my will, and eke my colour
 clene.
 I know how to deceyve my selfe withouten helpe,
 And how the lyon chastised is, by beatynge of the whelpe.

In standyng nere the fyre, I know how that I freese;
 Farre of I burne, in both I waste, and so my lyfe I leese.
 I know how Love doth rage upon a yeylden mynde,
 How smalle a nete may take and meash a harte of gentile
 kynde:

With seldom tasted swete to season hepes of gall,
 Revived with a glynt of grace old sorrowes to let fall.

The hydden traynes I know, and secret snares of Love,
 How soone a loke may prynte a thoughte that never will
 remove.

The slypper state I know, the sodein turnes from welthe,
 The doubtfull hope, the certain wobe, and sure despair of
 helthe.

A praise of his ladie.

Geve place you ladies and be gone,
 Boast not your selves at all,
 Fore here at hande approacheth one,
 Whose face will stayne you all.
 The vertue of her lively lookes
 Excels the precious stone,
 I wishe to have none other bookes
 To reade or look upon.
 In eche of her two christall eyes,
 Smyleth a naked boy;
 It would you all in heart suffice
 To see that lampe of joye.
 I think nature hath loste the moulde,
 Where she her shape did take;

Or else I doubte if nature could
 So fayre a creature make.
 She may be well comparde
 Unto the Phenix kinde,
 Whose like was never seene nor heard,
 That any man can fynde.
 In lyfe she is Diana chaste,
 In trouthe Penelopey,
 In woord and eke in dede stedfast;
 What will you more we say?
 If all the world were sought so farre,
 Who could finde suche a wight?
 Her beauty twinkleth lyke a starre
 Within the frosty night.

The Lover, refused of his love, embraceth vertue.

My youthfull yeres are past,
 My joyfull dayes are gone.
 My lyfe it may not last,
 My grave and I am one.
 My myrth and joyes are fled,
 And I a man in wo,
 Desirous to be ded,
 My mischiefe to forgo.
 I burne and am a colde,
 I freese amyddes the fyre,
 I see she doth witholde
 That is my honest desyre.
 I see my helpe at hande,
 I see my lyfe also,
 I see where she doth stande
 That is my deadly fo.

I see how she doth see,
 And yet she wil be blynde,
 I see in helpyng me,
 She sekes and wil not fynde.
 I see how she doth wrye,
 When I begynne to mone,
 I see when I come nye,
 How fayne she would be gone.
 I see what wil ye more?
 She will me gladly kill,
 And you shall see therfore
 That she shall have her will.
 I cannot live with stones,
 It is too hard a foode,
 I wil be dead at ones
 To do my Lady good.

The Death of ZOROAS, an Egiptian astronomer, in the first fight that Alexander had with the Persians.

Now clattring armes, now raging broyls of warre,
 Gan passe the noys of dredfull trumpetts clang,
 Shrowded with shafts, the heaven with cloude of dartes,
 Covered the ayre. Against full fatted bulles,
 As forceth kyndled yre the lyons keene,
 Whose greedy gutts the gnawing hunger pricketh;
 So Macedons against the Persians fare,
 Now corpses hyde the purpurde soyle with blood;
 Large slaughter on eche side, but Perses more,
 Moyst fieldes bebled, theyr heartes and numbers bate,
 Fainted while they gave backe, and fall to flighte.
 The liting Macedon by swordes, by gleaves,
 By bandes and troupes of footemen, with his garde,

Spedes to Dary, but hym his merest kyn,
 Oxate preserves with horsemen on a plumpe
 Before his carr, that none his charge should give.
 Here grunts, here groans, eche where strong youth is spent;
 Shaking her bloody hands, Bellone among
 The Perses soweth all kind of cruel death:
 With throte yrent he roares, he lyeth along
 His entrailes with a launce through gryded quyte,
 Hym smytes the club, hym woundes farre stryking bowe,
 And him the sling, and him the shining sword;
 He dyeth, he is all dead, he pantes, he restes.
 Right over stode in snowwhite armour brave,
 The Memphite Zoroas, a cunnyng clarke,

To whom the heaven lay open as his booke ;
 And in celestiall bodies he could tell
 The moving meeting light, aspect, eclips,
 And influence and constellations all ;
 What earthly chaunces would betyde, what yere,
 Of plenty storde, what signe forewarned death,
 How winter gendreth snow, what temperature
 In the prime tyde doth season well the soyle,
 Why summer burnes, why autumn bath ripe grapes,
 Whither the circle quadrate may become,
 Whether our tunes heavens harmony can yelde,
 Of four begyns among themselves how great
 Proportion is ; what sway the erryng lightes
 Doth send, in course gayne that fyrst movyng heaven ;
 What grees one from another distant be,
 What starr doth lett the hurtfull syre to rage,
 Or hym more mylde what opposition makes,
 What fyre doth qualifie Mavorses fyre,
 Wh, house eche one doth seeke, what plannett raignes
 Within this heaven sphere, nor that small thynges
 I speake, whole heaven he closeth in his brest.
 This sage then in the starres hath spyed the fates
 Threatned him death without delay ; and sith
 He saw he could not fatall order chaunge,
 Foreward he prest in battayle, that he might
 Mete with the rulers of the Macedons.
 Of his right hand desirous to be slain,
 The bouldrest borne, and worthiest in the feilde ;
 And as a wight, now wery of his lyfe,
 And seking death, in fyrst front of his rage,
 Comes desperately to Alexanders face,
 At him with dartes one after other throwes,
 With reckless wordes and clamour him provokes,
 And sayth, Nectanaks bastard shamefull stayne
 Of mothers bed, why locest thou thy strokes,
 Cowardes among ? Turn thee to me, in case
 Manhood there be so much left in thy heart,
 Come fight with me, that on my helmet weare
 Apollos laurell both for learninges laude,
 And eke for martiall praise, that in my shielde
 The seven fold Sophie of Minerve contein,
 A match more mete, Syr King, then any here.
 The noble prince amoved takes ruth upon
 The wilfull wight, and with soft words ayen,
 O monstrous man (quoth he) what so thou art,

I pray thee live, na-do not with thy death
 This lodge of Lore, the Muses mansion marre ;
 That treasure house this hand shall never spoyle,
 My sword shall never bruise that skilfull brayne,
 Long gathered heapes of sciēce sone to spill ;
 O how fayre fruites may you to mortall men
 From Wisdoms garden give ; how many may
 By you the wiser and the better prove :
 What error, what mad moode, what frenzy thee
 Perswades to be downe sent to depe Averno,
 Where no artes flourish, nor no knowledge vailes
 For all these sawes. When thus the sovereign said,
 Alighted Zoroas, with sword unsheathed,
 The careless king there smoate above the greve,
 At th' opening of his quishes wounded him,
 So that the blood down trailed on the ground :
 The Macedon perceiving hurt, gan gnashe,
 But yet his mynde he bent in any wise
 Hym to forbear, sett spurrs unto his stede,
 And turnde away, lest anger of his smarte
 Should cause revenger hand deale balefull blowes.
 But of the Macedonian chieftaines knights,
 One Meleager could not bear this sight,
 But ran upon the said Egyptian rude,
 And cutt him in both knees : he fell to the ground,
 Wherewith a whole rout came of souldiours sterne,
 And all in pieces hewed the sely seg :
 But happely the soule fled to the starres,
 Where, under him, he hath full sight of all,
 Whereat he gazed here with reaching looke.
 The Persians waild such sapience to forgoe,
 The very fone the Macedonians wisht
 He would have lived, King Alexander selfe
 Demde him a man unmete to dye at all ;
 Who wonne like praise for conquest of his yre.
 As for stoute men in field that day subdued,
 Who princes taught how to discern a man,
 That in his head so rare a jewel beares ;
 But over all those same Camenes, those same
 Divine Camenes, whose honour he procurde,
 As tender parent doth his daughters weale,
 Lamented, and for thanks, all that they can,
 Do cherish hym deceast, and sett him free,
 From dark oblivion of devouring death.

About the year 1553 wrote Dr. *Wilson*, a man celebrated for the politeness of his style, and the extent of his knowledge : what was the state of our language in his time the following may be of use to show.

Pronunciation is an apte orderinge bothe of the voyce, countenance, and all the whole bodye, accordyng to the worthines of suche woordes and mater as by speache are declared. The vse hereof is suche for anye one that liketh to haue prayse for tellyng his tale in open assemblie, that hauing a good tongue, and a comelye countenance, he shalbe thought to passe all other that haue the like vtterance : though they haue much better learning. The tongue geueth a certayne grace to euerye matter, and beautifieth the cause in like maner, as a swete soundyng lute muche setteth forth a meane deuised ballade. Or as the sounde of a good instrumente styrreth the hearers, and moueth muche delite,

so a cleare soundyng voice comforteth muche our deintie eares, with muche swete melodie, and causeth vs to allowe the matter rather for the reporters sake, then the reporter for the matters sake. Demosthenes, therefore, that famous oratour, beyng asked what was the chiefest point in al oratorie, gaue the chiefe and onely praise to Pronunciation; being demaunded, what was the seconde, and the thirde, he still made answer Pronunciation, and would make none other aunswere, till they leste askyng, declaryng hereby that arte without vtterance can dooe nothyng, vtterance without arte can dooe right muche.* And no doubt that man is in outwarde apparaunce halfe a good clarke, that hath a cleane tongue, and a comely gesture of his body. Æschines lykwyse beyng bannished his countrie through Demosthenes, when he had redde to the Rhodians his own oration, and Demosthenes aunswere thereunto, by force whereof he was bannished, and all they marueiled muche at the excellencie of the same: then (quod Æschines) you would have marueiled muche more if you had heard hymselfe speak it. Thus beyng cast in miserie and banished for euer, he could not but geue such great reporte of his deadly and mortal ennemy.

Thus have I deduced the *English* language from the age of *Alfred* to that of *Elizabeth*; in some parts imperfectly for want of materials; but I hope, at least, in such a manner that its progress may be easily traced, and the gradations observed, by which it advanced from its first rudeness to its present elegance.

CONTINUATION BY TODD.

Writers contemporary with Wilson. Notices of eminent Writers, from the time of queen Elizabeth to the present.

For the harvest of good writing, which arose in the time of Elizabeth, Ascham, Sir Thomas Smith, and Sackville lord Buckhurst, contemporaries of Wilson, contributed to prepare the soil. Of their works a specimen, for the purposes of comparison, may here be proper.

The work of Wilson was published in the reign of Edward the sixth: that of Ascham a little before the commencement of it, and republished in the earlier part of Elizabeth's. This is the *Toxophilus*, or *School of Shooting*; from the preface to which the following extract is made.

If any man would blame me, eyther for takinge such a matter in hande, or els for wretinge it in the English tongue, this aunswere I may make him, that when the best of the realme thincke it honest for them to use, I, one of the meanest sorte, ought not to suppose it vile for me to wryte: and thoughe to have written it in another tongue, had bene both more profitable for my study, and also more honest for my name, yet I can thinke my laboure well bestowed, if with a little hindrance of my profite and name, may come any furtherance to the pleasure or commodity of the gentlemen and yomen of Englande, for whose sake I take this matter in hand. And as for the Latine or Greeke tongue, everye thinge is so excellentlye done in them, that none can do better: In the Englishe tongue, contrary, everye thinge in a maner so meanlye both for the matter and handelinge, that no man can do worse. For therein the least learned, for the most part, have bene alwayes most readye to write. And they which had least hope in Latine, have bene most bould in Englishe: when surely everye man that is most readye to talke, is not most able to write. He that will write well in any tongue, must follow this counsel of Aristotle, to speake as the comon people do, to thinke as wyse men do: as so shoulde everye man understand him, and the judgement of wyse men alowe him. Manye Englishe writers have not done so, but usinge straunge wordes, as Latine, Frenche, and Italian, do make all thinges darke and harde. Onse I coimmuned with a man which reasoned the Englishe tongue to be enriched and encreased thereby, sayinge: 'Who will not prayse that feast where a man shall drincke at a dinner both wyne, ale, and beere?' 'Truly (quoth I) they be al good, every one taken by himselfe alone, but if you put malvesye and sacke, redde wyne and white, ale and beere and al in one pot, you shall make a drincke not easye to be knowen, nor yet holsome for the bodye.' Cicero, in folowing Isocrates, Plato, and Demosthenes, encreased the Latine tongue after another sort. This way, because divers men that wryte, do not know, they can neyther folow it, because of theyr ignorance, nor yet will prayse it for over arrogancye, two faultes, seldome the one out of the others companye. Englishe writers, by diversity of time, have taken dyvers matters in hand. In our fathers time no thinge was read but bookes of fayned chevalrie, wherein a man by readinge shoulde be led to none other ende, but onely to manslaughter and baudrye. If anye man suppose they were good enough to passe the time with all, he is deceived. For surely vaine

wordes do worke no small thinge in vaine, ignorant, and younge mindes, especially if they be geuen any thinge thereunto of their owne nature. These bookes (as I have heard say) were made the most part in abbayes, and monasteries, a very likely and fit fruite of such an ydle and blind kind of lyving. In our tyme now, when every man is geuen to know, much rather than to live wel, very many do write, but after such a fashon as very many do shoote. Some shooters take in hande stronger bowes than they be able to maintaine. This thinge maketh them some time to over shoote the marke, some time to shoote far wyde, and perchaunce hurt some that looke on.

From these curious remarks on our language and literature we proceed to the notice of Sir Thomas Smith, who is said to have been 'a great refiner of the English writing,'¹ which, at the time of his attempt, in 1542, is called 'too rough and unpolished.'² Accordingly, his Orations on the proposed marriage of Elizabeth have been considered as 'notable specimens of oratory and history.'³ The encomium is too high. But a citation shall be given.

* The Danes enjoyed once this realm too long. Of which although some of them were born here, yet so long as the Danes blood was in them, they could never but favour the poor and barren realm of Denmark more than the rich country of England.

The Normans after wan and possessed the realm. So long as ever the memory of their blood remained, the first most, and so less and less, as by little and little they grew to be English, what did they? keep down the English nation, magnifie the Normans; the rich abbies and priories they gave to their Normans; the chief holds, the noble seignories, the best-bishopricks, and all. Yea, they went so low as to the parsonages and vicarages; if one were better to the purse than another, that a Norman had. Poor English men were glad to take their leavings. And so much was our nation kept under, that we were glad to dissemble our tongue, and learn theirs; whereupon came the proverb, *Jack would be a gentle man if he could speak French.*⁴

We come now to a composition of particular importance in the history of our language, the first regular drama. This is the tragedy of Gorboduc written by Thomas Sackville, lord Buckhurst, when he was young; and supposed by Mr. Warton to have been finished early in the reign of Mary. It was printed surreptitiously, and inaccurately, in 1565; correctly, in 1571. I select a speech of Gorboduc to his counsellors, in answer to their advice upon his intention to give his realm in his life-time to his sons.

I see no cause to draw my mind
To fear the nature of my loving sons,
Or to misdeem that envy or disdain
Can there work hate, where nature planteth love.—
In quiet I will pass mine aged days,
Free from the travail and the painful cares
That hasten age upon the worthiest kings.
But lest the fraud, that ye do seem to fear,
Of flattering tongues corrupt their tender youth,
And writhe them to the ways of youthful lust,
To climbing pride, or to revenging hate,

Or to neglecting of their careful charge,
Lewdly to live in wanton recklessness,
Or to oppressing of the rightful cause,
Or not to wreak the wrongs done to the poor,
To tread down truth, or favour false deceit;
I mean to join to either of my sons
Some one of those, whose long approved faith
And wisdom tried may well assure my heart,
That mining fraud shall find no way to creep
Into their fensed ears with grave advise.

Of higher mood are the strains which this noble author has penned in his Induction to the Mirror for Magistrates; the plan of which, resembling in some degree the Inferno of Dante, he is said to have formed in the same reign. Language can hardly paint expiring Famine, and Death triumphing, in stronger colours.

But, O the doleful sight that then we see:
A griesly shape of Famine:—
Her starved corpse, that rather seem'd a shade,
Than any substance of a creature made.

On her while we thus firmly fix'd our eyes,
That bled for ruth of such a dreary sight,
Lo suddenly she shriek'd in so huge wise,
As made hell-gates to shiver with the might,
Wherewith a dart we saw how it did light

Right on her breast, and therewithal pale Death
Enthrilling it to reave her of her breath.

And by and by a dumb dead corpse we saw,
Heavy and cold, the shape of Death aright,
That daunts all earthly creatures to his law,
Against whose force in vain it is to fight.
Ne peers, ne princes, nor no mortal wight,
Ne towns, ne realms, cities, ne strongest tower,
But all perforce must yield unto his power.

³ Ibid. p. 218.

⁴ Ibid. Oration IV. Appendix, p. 83.

His dart anon out of the corpse he took,
And in his hand (a dreadful sight to see)
With great triumph eftsóones the same he shook,
That most of all my fears affrayed me :

His bodie dight with nought but bones perdie,
The naked shape of man there saw I plain,
All save the flesh, the sinew, and the veyn.

The delightfully figurative and picturesque style of our poetry is now to be observed in Spenser, who, as Warton has well remarked, here 'stands without a rival.' Even in our prose this high descriptive manner was sometimes adopted; and the romance of Sir Philip Sidney, at once a learned, manly, and fanciful composition, illustrates the richness of our tongue as well as the taste of the age, in the time of Elizabeth.

Advancing far into her reign, we find the language perfected in the Ecclesiastical Polity of Hooker. For, if this noble composition be compared with the best writings of modern date, it will be found, as Lowth has pronounced, that in correctness, propriety, and purity of English style, he has hardly been surpassed, or even equalled, by any of his successors.

Among the authors of this period also, and who is to be studied as an original master of our tongue, the incomparable Shakspeare appears.

About this time, Joseph Hall, afterwards Bishop of Exeter and Norwich, distinguished himself as a writer of satires; of which kind of writing, so called, in our language, he has pronounced himself the *first author*.

*I first adventure, with fool-hardy might,
To tread the steps of perilous despite :
I first adventure, follow me who list;
And be the second English satirist.*

He is better known as a theological writer, in the times of James the first and his successor. But as the composition illustrates existing manners and customs, I have brought forward the author at the precise date of it. Nor will I omit to notice some of his later works. These Satires were published in 1597. They often present models of elegance as well as wit, and admirable specimens of indignation as well as ridicule.

BOOK I. SATIRE I.

Nor ladie's wanton love, nor wandring knight;
Legend I out in rhimes all richly dight !
Nor fright the reader with the pagan vaunt
Of mightie Mahound, and great Termagaunt !
Nor list I sonnet of my mistress' face,
To paint some blowesse with a borrowed grace !
Nor can I bide to pen some hungrie scene
For thick-skin ears, and undiscerning eyne !

BOOK I. SATIRE VI.

Another scorns the home-spun thread of rhymes,
Match'd with the lofty feet of elder times :
Give him the numbred verse that Virgil sung,
And Virgil's self shall speak the English tongue ;
Manhood and garboiles shall he chaunt with chaunged
feet,
And headstrong dactyls making musick meet !
The nimble dactyls, striving to outgo
The drawing spondees, pacing it below !¹
The lingring spondees, labouring to delay
The breathless dactyls with a sudden stay !
Whoever saw a colt, wanton and wild,

Yok'd with a slow-foot ox on fallow field,
Can right areed how handsomely besets
Dull spondees with the English dactylets,
If Jove speak English in a thundring cloud,
Thwick-thwack, and *riff-raff*, roars he out aloud !
Fie on the forged saint that did create
New coin of words never articulate !

BOOK III. SATIRE I.

Thou canst maske in garish gauderie,
To suit a fool's far-fetched liverie.
A French head joyn'd to necke Italian,
Thy thighs from Germanie, and breast from Spain :
An Englishman in none, a fool in all ;
Many in one, and one in severall !

BOOK V. SATIRE II.

House-keeping's dead !——
Along thy way thou canst not but descry
Fair glittering halls to tempt the hopeful eye.—
So this gay gate adds fuel to thy thought,
That such proud piles were never rais'd for nought,
Beat the broad gates ! a goodly hollow sound
With double echoes doth again rebound ;

¹ This alludes to an absurd fashion, at that time, of publishing what were called English verses composed according to Latin rules.

But not a dog doth bark to welcome thee,
Nor churlish porter canst thou chafing see:
All dumb and silent, like the dead of night,
Or dwelling of some sleepy Sybarite.
The marble pavement hid with desert weed,
With house-leek, thistle, dock, and hemlock seed!—

Look to the fowred chimnies, which should be
The wind-pipes of good hospitality,
Through which it breatheth to the open air,
Betokening life and liberal well-fare;
Lo, there, the unthankful swallow takes her rest,
And fills the tunnell with her circled nest!

I know not whether it has been remarked, that, in the *Characters of Virtues and Vices*, published by this author in 1608, his propensity to satire, without the aid of poetry, is also very obvious. But bishop Hall has acquired, from his sententious way of writing, the name of the Christian Seneca; and his *Meditations*, which have been often printed, have been resembled to the *Morals of the Philosopher*. His style indeed is always pithy, sometimes highly animated, often delicate and tender. From his *Treatise of Contentation* I select the description of those, *who know how to want*.¹

Those only know how to want, that have learnt to frame their mind to their estate; like to a skilful musician, that can let down his strings a peg lower when the tune requires it; or like to some cunning spagyrick, that can intend or remit the heat of his furnace according to occasion. Those who, when they must be abased, can stoop submissly; like to a gentle reed, which, when the wind blows stiff, yields every way. Those, that in an humble obeysance can lay themselves low at the foot of the Almighty, and put their mouth in the dust; that can patiently put their necks under the yoke of the Highest, and can say with the prophet, *Truly this is my sorrow, and I must bear it*. Those, that can smile upon their afflictions; rejoicing in their tribulation, singing in the jail with Paul and Silas at midnight. Lastly, those, that can improve misery to an advantage; being the richer for their want, bettered with evils, strengthened with infirmities; and can truly say, to the Almighty, *I know that of very faithfulness thou hast afflicted me*.

As a fine writer, and one of the greatest of our literary benefactors, the brave and accomplished Raleigh is now to be noticed. His *History of the World* is a proud and undecaying monument of the power both of his talents and our tongue. To the dignity of history his style is particularly suited; pure, and never wanting nerve to strengthen it. There are also some poetical remains,² which elegantly exemplify his varied abilities.

Of Bacon the style is admirably diversified in the subjects of which he treats. The scholar accordingly marks the boldness of his imagery supported by suitable grandeur of diction. To the philosopher his discoveries are detailed with precision and perspicuousness. And to those of common attainments his easy and sententious language never speaks in vain. Of his *Essays*, he has told us, that they, 'of all his other works, have been most current; for that, as it seems, they come home to men's business and bosoms.'³

For abundant illustrations of popular diction, as well as graces of fine writing, the curious investigator of our language may next resort to Jonson, the most learned and judicious comedian, as Milton and his nephew Phillips call him.⁴ If in his language there was any fault, Dryden says, 'it was he weaved it too closely and laboriously, in his comedies especially: perhaps, too, he did a little too much romanize our tongue, leaving the words which he translated almost as much Latin as he found them; wherein, though he learnedly followed their language, he did not enough comply with the idiom of ours.'⁵

In ascertaining the copiousness of our tongue, further assistance may be derived from the *Anatomy of Melancholy*, by Burton; a book described by Antony Wood as 'so full of variety of reading, that gentlemen who have lost their time, and are put to a push for invention, may furnish themselves with matter for common or scholastical discourse and writing.'⁶ Burton was also distinguished as a 'thorough-paced philologist.'⁷ Quaint as his style is, the work abounds with wit and learning; often with expressions of happy choice; and rarely without such digression from grave to gay, as to relieve the tediousness of perpetual citation. As a poet he might have excelled, if we may judge from the

verses prefixed to his book; in which how pleasing the imagery and versification are, a stanza or two will show.

When I go musing all alone,
Thinking of divers things fore-known;
When I build castles in the air,
Void of sorrow, and void of fear,
Pleasing myself with phantasms sweet;
Methinks the time runs very fleet.
All my joys to this are folly,
Nought so sweet as melancholy.

When to myself I act, and smile,
With pleasing thoughts the time beguile,
By a brook-side, or wood so green;
Unheard, unsought-for, and unseen;
A thousand pleasures do me bless,
And crown my soul with happiness.
All my joys besides are folly,
Nought so sweet as melancholy.

In commendation of this mental luxury we also find the poets Beaumont and Fletcher, contemporary with Burton, employed. The Song in their drama, entitled *Nice Valour*, displaying the moral, the figure, and the disposition of melancholy, has been repeatedly observed to have suggested sentiments in the *Il Penseroso* of Milton. To these poets our language is, according to Dryden, in the greatest degree indebted. 'Their plots were generally more regular than Shakspeare's, especially those that were made before Beaumont's death; and they understood and imitated the conversation of gentlemen much better.—Humour, which Ben Jonson derived from particular persons, they made it not their business to describe: they represented all the passions very lively, but above all, love. I am apt to believe *the English language in them arrived to its highest perfection; what words have since been taken in, are rather superfluous than ornamental.*'¹

About this period wrote Owen Feltham, or Felltham; of whose principal work, entitled *Resolves*, a second edition was published in 1628. These *Resolves* are short Essays upon various subjects, displaying fine sentiments and harmonious language; and sometimes highly poetical conception. He has indeed written some poetry; but it is by his prose that he is distinguished.

'Love those pleasures well,' he says, 'that are on all sides legitimated by the bounty of heaven; after which no private gripe, nor fancied goblin, comes to upbraid my sense for using them; but such as may with equal pleasure be again dreamed over, and not disturb my sleep. This is to take off the parchings of the summer sun, by bathing in a pure and chrystal fountain.'² Again: 'Wisdom and knowledge are sweet as the wakened musings of delightful thoughts, which not only dew the mind with perfumes that ever refresh us, but raise us to the mountain that gives us view of Canaan; and shews us rays and glimpses of the glory that shall after crown us. Yet it is the object only that makes these good unto man, when God is the ocean that all his streams make way unto.'³

Yet once more will I cite this attractive writer; and the very beginning of the citation will call to the scholar's mind the words of Milton in his *Lycidas*:

Fame is the spur that the clear spirit doth raise,
The last infirmity of noble mind:

And he may find that, elsewhere also, Feltham says, '*In noble minds praise is certainly a spur, if not reward, to virtue.*'⁴

Desire of glory is the last garment that even wise men lay aside. For this you may take Tacitus: '*Etiam sapientibus cupido gloriæ novissima exuitur.*' Not that it betters himself, being gone; but that it stirs up those that follow him to an earnest endeavour after noble actions; which is the only means to win the fame we wish for. Themistocles that streamed out his youth in wine and venery, and was suddenly changed to a virtuous and valiant man, told one that asked what did so strangely change him, that the trophy of Miltiades would not let him sleep. Tamerlane made it his practice to read often the heroick deeds of his progenitors; not as boasting in them, but as glorious examples propounded to enfire his virtues. Surely nothing awakes our sleeping virtues, like the noble acts of our predecessors. They are flaming beacons, that fame and time have set on hills, to call us to a defence of virtue, whensoever vice invades the commonwealth of man. Who can endure to sculk away his life in an idle corner, when he has means? and finds how fame has blown about deserving names? Worth begets, in weak and base minds, envy; but, in those that are magnanimous, emulation. Roman virtue made Roman virtues lasting. Brave men never die, but like the phoenix; from whose preserved ashes one or other still springs up, like them.'⁵

We now approach the time, when 'our language began to lose the stability which it had obtained in that of Elizabeth; and was considered by every writer as a subject on which he might try his plastick skill, by moulding it according to his own fancy.' Such is the remark of Dr. Johnson,¹ arising from a consideration of the style of Sir Thomas Browne; a style 'vigorous, but rugged; learned, but pedantick; deep, but obscure: it strikes, but does not please; it commands, but does not allure: his tropes are harsh, and his combinations uncouth.' This is attributed to the disposition of the age already noticed. 'Milton,' it is added, 'in consequence of this encroaching licence, began to introduce the *Latin idiom*; and Browne, though he gave less disturbance to our structure and phraseology, yet poured in a multitude of exotick words; many, indeed, useful and significant, which, if rejected, must be supplied by circumlocution; and some so obscure, that they conceal his meaning rather than explain it.' Of Browne, Dr. Johnson was an admirer, and in some respects an imitator. In our immortal Milton (to whose prose alone the preceding observation applies) he has injuriously omitted to notice, that, though the structure of his sentences may sometimes be affected, the most glowing diction abounds, perspicuity, comprehensiveness, dignity, and closeness are often found united. If there were not innumerable passages, which might be cited from his prose-works, to illustrate those powers of his expression as well as the elevation of his thought, the *Areopagitica* and the *Treatise on Education* are distinct proofs of this assertion.

The influx of Latin words is also to be traced to an earlier period. It must have made some progress in the time of Sir Philip Sidney, who in a kind of masque presented before queen Elizabeth, introduces master Rombus, a pedagogue, eloquent in Anglo-Latinisms, which it is evidently the object of Sidney to ridicule. But the pedantick style was triumphant in the reign of James. The pious and learned bishop Andrews, pedantick in his conceits as well as diction, was styled the star of preachers. The great Bacon could sometimes sacrifice his judgement to the absurd fondness for the Latin and English intermixture. And Dryden has considered Jonson not only as occasionally 'romanizing our tongue too much,' but also in the practice as 'not enough complying with our own idiom.' The love of latinizing is to be found in many writers of little note till late in the seventeenth century. But I know none, in whom it is so glaring, and often so offensive, as in Waterhouse, the learned commentator on Fortescue. Heylin, in 1658, made this remark: 'Many think, that they can never speak elegantly, nor write significantly, except they do it in a language of their own devising; as if they were ashamed of their mother-tongue, and thought it not sufficiently curious to express their fancies. By means whereof more French and Latin words have gained ground upon us *since the middle of queen Elizabeth's reign*, than were admitted by our ancestors (whether we look upon them as the British or Saxon race) not only since the Norman but the Roman conquest.'² Of Heylin himself, a voluminous, acute, and learned writer, it has been said that he so spoke as to be understood by the meanest hearer, and so wrote as to be comprehended by the most vulgar reader.³

In referring to the reigns of our first and second Charles, we meet, however, with abundance of fine writing; with the clear and lively style which Chillingworth displays in exposing the tricks of sophistry; with the unadorned but manly periods of Hammond, 'spreading the treasur'd stores of truth divine';⁴ with language strong and pure in the dangerous compositions of Hobbes; and with phraseology, though not laboured, correctly dignified, in the sentences of Clarendon, which always gratify by the precision with which they describe events, and more particularly characters. But in bishop Jeremy Taylor the diction of our country 'bursts out into sudden blaze.'⁵ It is grand, it is awful, it is pathetick; bright and energetick, it irresistibly seizes the attention; copiously diversified, it has charms for the unlettered as well as for the scholar and the man of taste. His painting of the various ways, in which the last enemy, that shall be destroyed, accosts us, is perhaps unrivalled.

Death meets us every where, and is procured by every instrument, and in all chances; and enters in at many doors: by violence, and secret influence; by the aspect of a star, and the stink of a mist; by the emissions of a cloud, and the meeting of a vapour; by the fall of a chariot, and the stumbling at a stone; by a full meal, or an empty

stomach; by watching at the wine, or by watching at prayers; by the sun or the moon; by a heat or a cold; by sleepless nights, or sleeping days; by water frozen into the hardness and sharpness of a dagger, or water thawed into the floods of a river; by a hair or a raisin; by violent motion, or sitting still; by severity, or dissolution; by God's mercy or God's anger; by every thing in providence, and every thing in manners; by every thing in nature, and every thing in chance. *Eripitur persona, manet res*; we take pains to heap up things useful to our life, and get our death in the purchase; and the person is snatched away, and the goods remain: and all this is the law and constitution of nature; it is a punishment to our sins, the unalterable event of providence, and the decree of heaven. The chains that confine us to this condition are strong as destiny, and immutable as the eternal laws of God.

I have conversed with some men who rejoiced in the death or calamity upon others, and accounted it as a judgement upon them for being on the other side, and against them in the contention; but within the revolution of a few months the same man met with a more uneasy and unhandsome death; which when I saw, I wept, and was afraid; for I knew that it must be so with all men: for we also shall die, and end our quarrels and contentions, by passing to a final sentence.¹

With what elegant vivacity of diction has he illustrated a more attractive subject, if I may make one more citation from his admirable works!

Marriage is the mother of the world, and preserves kingdoms, and fills cities and churches, and heaven itself. Celibacy, like the fly in the heart of an apple, dwells in perpetual sweetness, but sits alone, and is confined and dies in singularity; but marriage, like the useful bee, builds a house and gathers sweetness from every flower, and labours and unites into societies and republics, and sends out colonies, and feeds the world with delicacies, and obeys their king, and keeps order, and exercises many virtues, and promotes the interest of mankind, and is that state of good things to which God hath designed the present constitution of the world.²

About the same time flourished Dr. Henry More, the celebrated Platonist, esteemed one of our greatest divines and philosophers, and no mean poet. Though now perhaps little remembered, it may be proper to exemplify his style. Nor will it be found that he, who in the seventeenth century was so enthusiastically admired, wanted power of fancy or considerable vigour of expression.

Then wilt thou say, God rules the world,
Though mountain, over mountain hurl'd,
Be pitch'd amid the foaming main:—
Though inward tempests fiercely rock
The tottering earth, that with the shock
High spires and heavy rocks fall down:—
Though pitchy blasts from hell up-borne
Stop the outgoings of the morn;
And nature play her fiery games,
In this forc'd night with fulgurant flames,

Baring by fits, for more affright,
The pale dead visages (ghastly sight)
Of men astonish'd at the stour
Of heaven's great rage, the rattling shower
Of hail, the hoarse bellowing of thunder,
Their own loud shrieks made mad with wonder:
All this confusion cannot move
The purged mind, freed from the love
Of commerce with her body dear,
Cell of sad thoughts, sole spring of fear!³

Whether therefore our eyes be struck with that more radiant lustre of the sun, or whether we behold that more placid and calm beauty of the moon; or be refreshed with the sweet breathings of the open air; or be taken up with the contemplation of those pure sparkling lights of the stars; or stand astonished at the gushing downfalls of some mighty river, as that of Nile; or admire the height of some insuperable and inaccessible rock or mountain; or with a pleasant horror and chillness look upon some silent wood, or solemn shady grove; whether the face of heaven smile upon us with a cheerful bright azure, or look upon us with a more sad and minacious countenance, dark pitchy clouds being charged with thunder and lightning to let fly against the earth; whether the air be cool, fresh, and healthful, or whether it be sultry, contagious, and pestilential, so that while we gasp for life we are forced to draw in a sudden and inevitable death; whether the earth stand firm and prove favourable to the industry of the artificer, or whether she threaten the very foundations of our buildings with trembling and tottering earthquakes accompanied with remugient echoes and ghastly murmurs from below; whatever notable emergencies happen for either good or bad to us; these are the Joves and Vejoves that we worship, which to us are not *many* but *one God*, who has the only power to save or destroy. And therefore from whatever part of this magnificent temple of his, the world, he shall send forth his voice, our hearts and eyes are presently directed thitherward with fear, love, and veneration.

Nor does our devotion stop here, or rather stay only without; but those more notable alterations and commotions we find within ourselves, we attribute also to him whose spirit, life, and power filleth all things. And therefore those very passions of love and wrath, on the former whereof dependeth all that kindly sweetness of affection that is found in either the friendship of men or love of women, as on the latter all the pomp and splendour of war; these, with the rest of the passions of the soul, we look upon as manifestations of his presence, who worketh every where for our solace, punishment, or trial.¹

Hence we proceed to the learned and copious, I might say occasionally redundant, Barrow; in whom accuracy of erudition, energy of style, and force of reasoning, are alike conspicuous. His description of wit is a masterpiece of composition:—

First, it may be demanded, what the thing we speak of is? Or what this facetiousness doth import? To which questions I might reply, as Democritus did to him that asked the definition of a man, 'Tis that which we all see and know.' Any one better apprehends what it is by acquaintance, than I can inform him by description. It is, indeed, a thing so versatile and multiform, appearing in so many shapes, so many postures, so many garbs, so variously apprehended by several eyes and judgements, that it seemeth no less hard to settle a clear and certain notion thereof, than to make a portrait of Proteus, or to define the figure of the fleeting air. Sometimes it lieth in pat allusion to a known story, or in seasonable application of a trivial saying, or in forging an apposite tale: sometimes it playeth in words and phrases, taking advantage from the ambiguity of their sense, or the affinity of their sound: sometimes it is wrapped in a dress of humorous expression: sometimes it lurketh under an odd similitude: sometimes it is lodged in a sly question, in a smart answer, in a quirkish reason, in a shrewd imitation, in cunningly divesting or cleverly retorting an objection: sometimes it is couched in a bold scheme of speech, in a tart irony, in a lusty hyperbole, in a startling metaphor, in a plausible reconciling of contradictions, or in acute nonsense: sometimes a scenical representation of persons or things, a counterfeit speech, a mimical look or gesture, passeth for it: sometimes an affected simplicity, sometimes a presumptuous bluntness giveth it being: sometimes it riseth only from a lucky hitting upon what is strange: sometimes from a crafty wresting obvious matter to the purpose. Often it consisteth in one knows not what, and springeth up one can hardly tell how. Its ways are unaccountable, and inexplicable: being answerable to the numberless roving of fancy, and windings of language. It is, in short, a manner of speaking out of the simple and plain way, (such as reason teacheth and proveth things by,) which, by a pretty surprizing uncouthness in conceit or expression, doth affect and amuse the fancy, stirring it in some wonder, and breeding some delight thereto. It raiseth admiration, as signifying a nimble sagacity of apprehension, a special felicity of invention, a vivacity of spirit, and reach of wit more than vulgar; it seeming to argue a rare quickness of parts, that one can fetch in remote conceits applicable; a notable skill, that he can dextrously accommodate them to the purpose before him; together with a lively briskness of humour, not apt to damp those sportful flashes of imagination. (Whence in Aristotle such persons are termed *ἐπιδέξιοι*, dextrous men, and *εὐστροφοί*, men of facile or versatile manners, who can easily turn themselves to all things, or turn all things to themselves.) It also procureth delight, by gratifying curiosity with its rareness, as semblance of difficulty: (as monsters, not for their beauty, but their rarity; as juggling tricks, not for their use, but their abstruseness, are beheld with pleasure:) by diverting the mind from its road of serious thoughts; by instilling gaiety and airiness of spirit; by provoking to such dispositions of spirit; in way of emulation or complaisance, and by seasoning matters, otherwise distasteful or insipid, with an unusual and thence grateful tang.²

Coeval with Barrow was bishop Pearson; of whose writings the very dust has been pronounced by Bentley gold. That for exactness of method, correctness of language, and well-turned periods, he is to be ranked among our best writers, all will acknowledge who have read with attention his Exposition of the Creed. I will select his analogical illustration of the resurrection.

Beside the principles of which we consist, and the actions which flow from us, the consideration of the things without us, and the natural course of variations in the creature, will render the resurrection yet more highly probable. Every space of twenty-four hours teacheth thus much, in which there is always a revolution amounting to a resurrection. The day dies into a night, and is buried in silence and in darkness; in the next morning it appeareth again and reviveth, opening the grave of darkness, rising from the dead of night; this is a diurnal resurrection. As the day dies into night, so doth the summer into winter: the sap is said to descend into the root, and there it lies buried in the ground; the earth is covered with snow, or crusted with frost, and becomes a general sepulchre; when the spring appeareth all begin to rise, the plants and flowers peep out of their graves, revive, and grow and flourish; this is the annual resurrection. The corn by which we live, and for want of which we perish with famine, is notwithstanding cast upon the earth, and

buried in the ground, with a design that it may corrupt, and being corrupted may revive and multiply; our bodies are fed by this constant experiment, and we continue this present life by succession of resurrections. Thus all things are repaired by corrupting, are preserved by perishing, and revive by dying; and can we think that man, the lord of all these things, which thus die and revive for him, should be detained in death as never to live again? Is it imaginable that God should thus restore all things to man, and not to restore man to himself? If there were no other consideration, but of the principles of human nature, of the liberty and remunerability of human actions, and of the natural revolutions and resurrections of other creatures, it were abundantly sufficient to render the resurrection of our bodies highly probable.

We must not rest in this school of nature, nor settle our persuasions upon likelihoods; but as we passed from an apparent possibility unto a high presumption and probability, so must we pass from thence unto a full assurance of an infallible certainty. And of this indeed we cannot be assured but by the revelation of the will of God; upon his power we must conclude that we may, from his will that we shall, rise from the dead. Now the power of God is known unto all men, and therefore all men may infer from thence a possibility; but the will of God is not revealed unto all men, and therefore all have not an infallible certainty of the resurrection. For the grounding of which assurance, I shall shew that God hath revealed the determination of his will to raise the dead, and that he hath ~~not only~~ delivered that intention in his Word, but hath also several ways confirmed the same.¹

Of the same period was Cowley, the ease and unaffected structure of whose sentences Dr. Johnson has especially commended. Hence a learned biographer of the critick has taken occasion to consider his injudicious partiality to Brown; and in the following discriminative remarks to introduce some of our finest writers, with a comparative estimate also of Addison and Johnson.²

Cowley may be placed at the head of those who cultivated a clear and natural style. Dryden, Tillotson, and Sir William Temple, followed. Addison, Swift, and Pope, with more correctness, carried our language well nigh to perfection. Of Addison Johnson was used to say, *He is the Raphael of Essay writers*. How he differed so widely from such elegant models, is a problem not to be solved, unless it be true, that he took an early tincture from the writers of the last century, [the seventeenth,] particularly Sir Thomas Brown. Hence the peculiarities of his style, new combinations, sentences of an unusual structure, and words derived from the learned languages. His own account of the matter is, *When common words were less pleasing to the ear, or less distinct in their signification, I familiarized the terms of philosophy, by applying them to popular ideas*. But he forgot the observation of Dryden, *If too many foreign words are poured in upon us, it looks as if they were designed, not to assist the natives, but to conquer them*. There is, it must be admitted, a swell of language, often out of all proportion to the sentiment; but there is, in general, a fulness of mind, and the thought seems to expand with the sound of the words. Determined to discard colloquial barbarisms and licentious idioms, he forgot the elegant simplicity that distinguishes the writings of Addison. He had what Locke calls a round-about view of his subject; and though he was never tainted, like many modern wits, with the ambition of shining in paradox, he may be fairly called an original thinker. His reading was extensive. He treasured in his mind whatever was worthy of notice, but he added to it from his own meditation. He collected *quæ reconderet, auctaque promeret*.

Addison was not so profound a thinker. He was *born to write, converse, and live with ease*: and he found an early patron in lord Somers. He depended, however, more upon a fine taste than the vigour of his mind. His latin poetry shows that he relished, with a just selection, all the refined and delicate beauties of the Roman classicks; and, when he cultivated his native language, no wonder that he formed that graceful style which has been so justly admired; simple, yet elegant; adorned, yet never over-wrought; rich in allusion, yet pure and perspicuous; correct, without labour; and though sometimes deficient in strength, yet always musical. His essays in general are on the surface of life; if ever original, it was in pieces of humour. Sir Roger de Coverley, and the tory fox-hunter, need not to be mentioned.

Johnson had a fund of humour, but he did not know it; nor was he willing to descend to the familiar idiom, and the variety of diction, which that mode of composition required. The letter in the Rambler, No. 12, from a young girl that wants a place, will illustrate this observation.

Addison possessed an unclouded imagination, alive to the first objects of nature and of art. He reaches the sublime without any apparent effort. When he tells us, 'If we consider the fixed stars as so many oceans of flame, that are each of them attended with a different set of planets; if we still discover new firmaments, and new lights, that are sunk farther in those unfathomable depths of æther; we are lost in a labyrinth of suns and worlds, and confounded with the magnificence and immensity of nature.' The ease, with which this passage rises to unaffected grandeur, is the secret charm that captivates the reader.

¹ Exposition of the Creed: art. xi. The Resurrection of the Body.

² Arthur Murphy, Life of Dr. Johnson.

Johnson is always lofty; he seems, to use Dryden's phrase, to be o'er-inform'd with meaning, and his words do not appear to himself adequate to his conception. He moves in state, and his periods are always harmonious. His oriental tales are in the true style of eastern magnificence, and yet none of them are so much admired as the visions of Mirza. In matters of criticism, Johnson is never the echo of preceding writers; he thinks and decides for himself.

If we except the Essays on the Pleasures of Imagination, Addison cannot be called a philosophical critick. His Moral Essays are beautiful; but in that province nothing can exceed the Rambler; though Johnson used to say, that the Essay on the Burthens of Mankind (in the Spectator, No. 558.) was the most exquisite he had ever read.

Talking of himself, Johnson said, 'Topham Beauclerk has wit, and every thing comes from him with ease; but when I say a good thing, I seem to labour.' When we compare him with Addison, the contrast is still stronger. Addison lends grace and ornament to truth; Johnson gives it force and energy. Addison makes virtue amiable; Johnson represents it as an awful duty. Addison insinuates himself with an air of modesty; Johnson commands like a dictator, but a dictator in his splendid robes, not labouring at the plough. Addison is the Jupiter of Virgil, with placid serenity talking to Venus, 'vultu, quo cælum tempestatesque serenat.' Johnson is Jupiter tonans: he darts his lightning, and rolls his thunder, in the cause of virtue and piety. The language seems to fall short of his ideas; he pours along, familiarizing the terms of philosophy, with bold inversions, and sonorous periods; but we may apply to him what Pope has said of Homer: 'It is the sentiment that swells and fills out the diction, which rises with it, and forms itself about it; like glass in the furnace, which grows to a greater magnitude, as the breath within is more powerful, and the heat more intense.'

It is not the design of this comparison to decide between these two eminent writers. In matters of taste every reader will choose for himself. Johnson is always profound, and of course gives the fatigue of thinking. Addison charms while he instructs; and writing, as he always does, a pure, an elegant, an idiomatick style, he may be pronounced the safest model for imitation.

The great master of our language, however, in the estimation of Johnson himself, is evidently Dryden.

Dryden in his prose is always *another and the same*; he does not exhibit a second time the same elegances in the same form, nor appears to have any art other than that of expressing with clearness what he thinks with vigour. His style could not easily be imitated, either seriously or ludicrously; for, being always equable and always varied, it has no prominent or discriminative characters. The beauty, who is totally free from disproportion of parts and features, cannot be ridiculed by an overcharged resemblance. From his prose, however, Dryden derives only his accidental and secondary praise: the veneration, with which his name is pronounced by every cultivator of English literature, is paid to him as he refined the language, improved the sentiments, and tuned the numbers, of English poetry.¹

Allowing Dryden this supremacy, the cultivators of our literature, however, will acknowledge, with pride as well as gratitude, their obligations to those who flourished near his time: to Tillotson and Temple, each distinguished for simplicity of style; the former also for his perspicuity, the latter for ease and harmony: to Swift, who, regardless of harmonious periods, writes with plainness and with precision; who 'studied purity,'² and has rarely missed it; who of correct English is a model: to Addison, 'the sweetest child of Attick elegance:' to Pope, of whom Watts has said, that there is scarcely a happy combination of words, or a phrase poetically elegant in the English language, which he has not inserted into his version of Homer: to South, whose rich diction is rarely unaccompanied with honest indignation, or keen sarcasm: to the polished and graceful Atterbury: to Scott, the eloquent author of the Christian Life: to Locke, who 'yields not the palm of metaphysical acuteness to the sullen sophistry of Hobbes, or the cold scepticism of Hume:'³ and to Berkeley, before whose 'brilliancy of imagination, and delicacy of taste,' the labour and pomp of Shaftesbury sink into insignificance.

We come now to the contemporaries of Johnson, and find in Warburton the force and freedom of the lexicographer, but not the splendid diction. The character of Warburton's style, 'is freedom and force united.'⁴ Nobody understood the philosophy of grammar better; yet in the construction of his terms he was not nice, rather he was somewhat negligent.—To say all in a word, he possessed, in an eminent degree, those two qualities of a great writer, *sapere et fari*; I mean, superior sense, and the power of doing justice to it by a sound and manly eloquence. It was an ignorant cavil, that charged him with

want of taste. The objection arose from the originality of his manners; but he wrote, when he thought fit, with the greatest purity and even elegance, notwithstanding his strength and energy, which frequently exclude those qualities. Of a different excellence of style and manner we have a most pleasing example in Goldsmith. All is inartificial. His periods, however, are 'so smooth and full of melodious sounds,' that to a true English ear 'the harp of Orpheus cannot be more charming.' To his contemporary, who assumed the name of Junius, Johnson himself has conceded liveliness of imagery, pungency of periods, and fertility of allusion; but cannot think the style of this writer secure from criticism, or that his expressions are not often trite, and his periods feeble.¹ At another time Johnson said, 'I should have believed Burke to be Junius, because I know no man but Burke who is capable of writing these letters; but Burke spontaneously denied it to me. The case would have been different, had I asked him if he was the author; a man so questioned, as to an anonymous publication, may think he has a right to deny it.'² To the eloquent, the malignant, and still unmasked calumniator, Burke is certainly not inferior in any charm of composition; and when Burke impugned the characters or opinions of others, he had recourse to 'open war,' and not to 'covert guile.' If we look for simple elegance of style, where is it more conspicuous than in his philosophical criticism on the Sublime and Beautiful? if for richer ornaments of diction, for rhetoric both splendid and affecting, where are they more thickly sown than in his tract upon the French Revolution? But by his morals as well as faculties Burke gratifies the reader; and is not found like the infidel philosopher to whom England is indebted for one of her histories, or like the learned investigator of the Decline and Fall of the Roman Empire, sullyng the finest graces of language with indecent sneers against revealed religion. Lastly, as to a model of the elegant diction of modern times, and which is not made the vehicle of licentious opinions, we may resort to Waron, the historian of English poetry. His style is remarkable for its perspicuity; and the modulation or dignity of his periods is exceeded only by those of him, 'WHOSE WRITINGS HAVE GIVEN ARDOUR TO VIRTUE AND CONFIDENCE TO TRUTH.'

Of the power over language, which the last great writer has exercised, his preface to this Dictionary is an ample and noble specimen. But to few readers are any of Dr. Johnson's compositions unknown: Mr. Warton's delightful work, on account of its learned allusions and antiquarian research, has not been so generally explored.³ An extract from it, therefore, may to some be a novel display of the richness of our tongue; and may be not the less gratifying, if it opens to their view some exploded ceremonies of 'the olden time.'

The age of queen Elizabeth is commonly called the golden age of English poetry. It certainly may not improperly be styled the most poetical age of these annals.

Among the great features which strike us in the poetry of this period, are the predominancy of fable, of fiction, and fancy, and a predilection for interesting adventures and pathetic events. I will endeavour to assign and explain the cause of this characteristic distinction, which may chiefly be referred to the following principles, sometimes blended, and sometimes operating singly: The revival and vernacular versions of the classics, the importation and translation of Italian novels, the visionary reveries or refinements of false philosophy, a degree of superstition sufficient for the purposes of poetry, the adoption of the machineries of romance, and the frequency and improvements of allegoric exhibition in the popular spectacles.

When the corruptions and impostures of popery were abolished, the fashion of cultivating the Greek and Roman learning became universal: and the literary character was no longer appropriated to scholars by profession, but assumed by the nobility and gentry. The ecclesiastics had found it their interest to keep the languages of antiquity to themselves, and men were eager to know what had been so long injuriously concealed. Truth propagates truth, and the mantle of mystery was removed not only from religion but from literature. The laity, who had now been taught to assert their natural privileges, became impatient of the old monopoly of knowledge, and demanded admittance to the usurpations of the clergy. The general curiosity for new discoveries, heightened either by just or imaginary ideas of the treasures contained in the Greek and Roman writers, excited all persons of leisure and fortune to study the classics. The pedantry of the present age was the politeness of the last. An accurate comprehension of the phraseology and peculiarities of the ancient poets, historians, and orators, which yet seldom went farther than a kind of technical erudition, was an indispensable and almost the principal object in the circle of a gentleman's education. Every young lady of fashion was carefully instituted in classical letters: and the daughter of a duchess was taught, not only to distil strong waters, but to construe

Greek. Among the learned females of high distinction, Queen Elizabeth herself was the most conspicuous. Roger Ascham, her preceptor, speaks with rapture of her astonishing progress in the Greek nouns; and declares, with no small degree of triumph, that during a long residence at Windsor-castle, she was accustomed to read more Greek in a day than 'some prebendary of that church did Latin in one week.' And although perhaps a princess looking out words in a lexicon, and writing down hard phrases from Plutarch's Lives, may be thought at present a more incompatible and extraordinary character, than a canon of Windsor understanding no Greek and but little Latin, yet Elizabeth's passion for these acquisitions was then natural, and resulted from the genius and habitudes of her age.

The books of antiquity being thus familiarized to the great, every thing was tinctured with ancient history and mythology. The heathen gods, although discountenanced by the Calvinists on a suspicion of their tending to cherish and revive a spirit of idolatry, came into general vogue. When the queen paraded through a country-town, almost every pageant was a pantheon. When she paid a visit at the house of any of her nobility, at entering the hall she was saluted by the Penates, and conducted to her privy-chamber by Mercury. Even the pastry-cooks were expert mythologists. At dinner, select transformations of Ovid's Metamorphoses were exhibited in confectionary; and the splendid icing of an immense historic plum-cake, was embossed with a delicious basso-relievo of the destruction of Troy. In the afternoon, when she condescended to walk in the garden, the lake was covered with Tritons and Nereids: the pages of the family were converted into Wood-nymphs, who peeped from every bower; and the footmen gamboled over the lawns in the figure of Satyrs.

I have thus made some slight additions to Dr. Johnson's history of our language; showing a variety of style which has obtained, and humbly guiding the curious to more ample information on the subject. An elaborate and regular history of the English tongue is a desideratum in our literature; and instead of a paucity of materials subservient to this object, as Dr. Johnson would insinuate, there is abundance. Volumes are due to it. Let the investigator mark the unwearied labours of Wanley in his description of Saxon manuscripts; let him explore others, which in the libraries of our cathedrals, and colleges, and other repositories, exist, and have not received the advantage of Wanley's notice: and he will not complain of the paucity of materials. Next, let him attend to the following remark of Mr. Tyrwhitt. 'In order to trace with exactness the progress of any language, it seems necessary, 1. that we should have before us a continued series of authors; 2. that those authors should have been approved, as having written, at least, with purity; and 3. that their writings should have been correctly copied. In the English language, we have scarce any authors within the first century after the Conquest; of those, who wrote before Chaucer, and whose writings have been preserved, we have no testimony of approbation from their contemporaries or successors; and lastly, the copies of their works, which we have received, are in general so full of inaccuracies, as to make it often very difficult for us to be assured, that we are in possession of the genuine words of the author.' Such materials let him examine with care; and he will find, what in the present sketch I have occasionally but briefly shown, that the collation of what is printed with what is written will often establish that which has been disputed, and rectify that which has been perverted. Let him moreover precisely ascertain and compare our provincial dialects. And thus his labours may tend to form a complete history of the language, and at the same time illustrate the general philosophy of speech.

NOTES ON DR. JOHNSON'S HISTORY.

NOTE A.

Keltic Group of Languages.

THE systematic classification of the Welsh and its congeners is as follows. The class in general is called Keltic, or Celtic, according to the orthography of the writer who uses it. It falls into two primary divisions—the Gaelic and the British. The former contains the Gaelic, or Erse, of Ireland and the Highlands of Scotland, with the Manks of the Isle of Man; the latter, the Cambrian, or Welsh, of Wales, the Cornish, and the Armorican of Brittany. The Gallic, or language of ancient Gaul, we know only through its fragments, preserved in proper names and old glosses. The true British words in English, by which is meant words taken up directly by the Anglo-Saxon invaders from the current language of the original inhabitants, are but few; and this is what Johnson means to assert. That no words have been taken up from the Welsh or Gaelic at a later period; that there are no Welsh provincialisms on the border counties; that there are no words originally common to the German or Keltic tongues; and that there are none which, originally Keltic, have come to us through the Latin and French, he neither asserts nor denies; nor could he have denied it legitimately.

NOTE B.

Gothic, or German, Group of Languages.

The classifications of the writers of the present time make *Gothic*, or *German*, the name of the class. Its two primary divisions are the Teutonic and the Scandinavian or Norse. The first falls into the Mæso-Gothic, the High German, or Hoch Deutsch, and the Low German, or Platt Deutsch; the latter into the Icelandic, the Faroic, the Swedish, the Norwegian provincial dialects (the Danish being the literary language), and the Danish. The Anglo-Saxon, the Old Saxon, the Dutch of Holland, the several Platt Deutsch dialects, and the Frisian, each in its respective stage, belong to the Low German division, which graduates into the High through the Frank.

Slavonian is scarcely general enough. To the proper Slavonic languages, or those akin to the Bohemian, the Polish, the Servian, and the Russian, should be added the Lithuanic, the Old Prussian, and the Let, these forming the Lithuanic group. The Slavonic and Lithuanic are divisions of the *Sarmatian* class.

In Johnson's time the languages of a second and very important class, the *Ugrian* or *Fin*, had commanded but little attention. It contains the Fin proper of Finland, the Estonian, the Lap, the Magyar or Hungarian, and others.

NOTE C.

Mæso-Gothic.

The *Gothic* was the language of the Ostrogoths and Visigoths; for whom, when first converted to Christianity, Ulphilas made a translation of a considerable part of the Scriptures; the Gospels of which, though mutilated, along with small fragments of the other books, have come down to us. As a section of the nation settled in Mæsia, Mæso-Gothic is the name by which the Ulphiline translation is best known. It was, also, the language of the conquerors of Italy under Theodoric.

The specimens of the Mæso-Gothic are the oldest of the German language; and, as the structure of the language is old also, the Mæso-Gothic wears the character of a mother-tongue. Not one, however, of the existing languages or dialects is directly deduced from it.

NOTE D.

The earlier Saxon.—Its congeners.—The Anglo-Saxon Alphabet.—The term 'Anglo-Saxon.'

1. The exact form of the Saxon at any particular time anterior to the introduction of its alphabet is, of course, a matter of great uncertainty. An approximate idea, however, of its general character is far from impossible. With two well-marked Anglo-Saxon dialects, the West Saxon and the Northumbrian; with the Old Saxon; with the Frisian; with an adequate representation of the High and Low German in their older forms; with the Old Norse; and with the Mæso-Gothic as materials to which the best established principles deduced from the study of languages in general may be applied, a fair conception of its form during the earlier stages is attainable.

The first and simplest step in the investigation of this is the elimination of the Latin introduced, either directly or indirectly, by the Romans. After which comes the consideration of the details in the way of inflection. It may safely be predicated of the Saxon, that, at some date or other before its introduction into England, the first person singular ended in *-o*, a few instances of which may be found in some of the earlier West-Saxon charters; while in the Northumbrian dialect it is common. Earlier still this *-o* was *-u*, and earlier still *-om*, or *-um*; in other words a verb in *-μ*; *am*, being, at the present time, the only remaining instance of such. The second singular probably ended in *-s*, rather than in *-st*. The plural, instead of having all its three persons in *-ap*, may have run *-mes*, *-it*, *-ent*. Earlier still, *-s* stood, in many cases, where *-r-* was afterwards to be found; just as, in Latin, *arbo-s*, preceded *arbo-r*. There was a reduplicate perfect; even as there was one in Greek and Latin—*τέ-τυφα*, *mo-mordi*. Every one of the so-called strong preterites, i.e. the past tenses which are formed by changing the vowel (*sing*, *sang*, *sung*) as opposed to those ending in *-d* or *-t*, at one time or other, began with a repetition of its initial followed by a vowel; as in the Mæso-Gothic *laia*=laugh, *lailo*=laughed, *haita*=call, *hai-hait*=called.

2. It must be remembered that the Saxon of England is not the only member of the group. For at least three hundred years after the ordinary date of the Saxon invasion the Saxon of the original continental localities continued to be spoken. Beda called this the Old Saxon, and the name has been adopted. One work of considerable importance, the *Heliand* (Saviour), a Gospel Harmony, and other records of less importance have come down to us. They chiefly represent the language of Westphalia, and, consequently, a dialect lying somewhat south of the districts which sent over the invaders of Britain. Until the true explanation of the differences between this form of speech and the Anglo-Saxon, or Saxon of England, was understood, the *Heliand* was called a Dano-Saxon composition; its peculiarities being attributed to the influence of the Danes. By the conquests of Charlemagne, the Saxon, Angle, or English of the Continent was displaced by the Low German.

The nearest approach on the part of any existing language to a descendant from either the Old Saxon or the Anglo-Saxon is to be found in the Frisian of the Dutch province of Friesland, the island of Heligoland, and a part of Sleswick; and the approximation is a close one. At present, the Frisian and English languages are mutually unintelligible. The difference in their history amply accounts for this. Whilst the English has been modified by so important a political influence as that of the Norman Conquest, and by a literature of more than seven centuries, the Frisian of the Sleswick districts has been all but unwritten, while in Holland its cultivation has been, at best, but that of a provincial form of speech. Nevertheless, the *Old Frisian* was, beyond doubt, intelligible to an *Old Saxon*. At any rate, if it were not for the political division, Frisian, Old Saxon, and Anglo-Saxon would, in all probability, have been treated as dialects of a single language. I have little doubt that in England much that passed under the name of Saxon was, in reality, Frisian.

3. The history of the Anglo-Saxon Christianity must be separated, if not from the history of its literature, from that of its letters in the sense of Alphabet. That the early Christianity of the first Anglo-

Saxon kingdom, or that of the present county of Kent, was introduced by Frank missionaries, is the current doctrine; and, in the main, a true one. All, however, that we know of the first results of the Frank mission, in English, relates to oral preaching only. The first account we have of them is that of Beda, who lived nearly a century and a half after the events he describes; and in the way of Anglo-Saxon writing, the very earliest date that can be given to any specimen or sample is that of the earliest manuscript of one of his works. As this was written, all that followed was written; and the alphabet of it is *not* one that the Franks would have introduced. It was that of the people ~~to~~ whom the Frank ecclesiastics preached; that of the British Church: in other words, so far as the Franks taught their brother Germans, they taught them as pagans; but so far as they taught them as settlers in England, they taught them as men who were to be guarded against schism. In the latter they succeeded; but when writing began, the alphabet was that of the country adopted; and this was not German, but Keltic. That it was Irish rather than Welsh is a convenient, rather than an undeniably accurate, expression. The Irish palæography is the older; and the missionary labours of the Irish Church, under the school of Columbanus, though exaggerated by some and underrated by others, have given a prominence to the influence of the remoter island; one (it may be added) which many analogies, such as that of Iceland in its relations to Norway, Sweden, and Denmark, have a tendency to confirm.

* The Anglo-Saxon alphabet, then, is of Irish origin; and, as such, was applied to a language other than Irish in respect to its structure; a point which, when we have to consider the heterogeneous character of the elements which make the English the worst spelt language in the world, must, by no means, be overlooked. The fact itself, on purely palæographical views, is only doubted by those who either exaggerate the civilization of the Teutonic nations, or ignore the importance of the British Church. From a more general view it shows itself in the alphabets of the present time. The Irish, when written, as it often is, in the vernacular alphabet, is, letter for letter, the Anglo-Saxon of both the earliest and the latest manuscripts; and that it is not borrowed from them is shown by its own early specimens. The English of the present time is exceptional to its congeners both of Germany and Scandinavia; except so far as they are all Italian. But where it differs from the Frank it agrees with the Irish. There are other small points of detail; but the main element of practical importance lies between the letters K and C. The English only, of all the German languages, follows the Latin in eschewing so far as possible the former; and this is just what the Anglo-Saxons did before them, and before them the Irish. At first this seems a trifling matter; but whoever looks at the orthographies of France and Spain will see that, on the strength of the rarity of *K* in the Latin alphabet, a whole system of orthographical expedients has been devised; not to mention the spelling adopted in our own country, where the present tense of one word (*ken*) begins with one letter and its preterite (*can*) with another. I may add that Mr. Westwood's researches, founded upon the special evidence of the palæography, with a similar result, i.e. a connexion between the Anglo-Saxon alphabet and that of the British Church, as opposed to that of the Frank missionaries, is already before the public.

4. Johnson's term for the English of the times before the Norman Conquest is Saxon. The present editor prefers the compound Anglo-Saxon. Much has, of late, been said against the use of this term; and many of the objections to it have been legitimate. It has been fairly argued that if the language which is now called English is the lineal descendant of the language that was spoken in the ninth, tenth, and eleventh centuries, as the language of the West Saxons, or Mercians, of the Heptarchy, why do we not call the mother-tongue by the name borne by the daughter? If the language of the present time is Modern English, what is the Ancient, or Old English, but the language of the times before the Norman Conquest? And what was the language of the times before the Conquest but English in its old or ancient form? If so, why ignore so simple and so vernacular a name as Old English? Why prefer such a term as Anglo-Saxon, which has neither brevity nor accuracy to recommend it? Why, when the pedigree of our native tongue is clear and continuous, unnecessarily disguise the continuity? Several able investigators have argued thus; not always without a touch of temper, yet rarely without cogency and truth. It is true, and over true, that, if we ask what our earliest forefathers called their language, the answer will be that they called it English, or the English Speech (*Englisc Spræc*); and it is almost as true that if the term *Anglo-Saxon* was ever used except as a

translation from the Latin, or for some special purpose of distinction, it was used very rarely; very rarely, if at all, even in the so-called Saxon districts, Essex, Middlesex, Sussex, and Wessex. English was the common name of our language when we first find it spoken in the South and West of England, as early as the time of Beda; and English is the name by which, at a later period, even the Scotch of the Lowlands is called by the most Scottish of the Scotch writers. That English was the national, natural name, and that Anglo-Saxon was merely a name used by learned men (and that by no means frequently), is beyond doubt. The Anglo-Saxon, then, of modern scholars was not only, as a matter of fact, Old English, but (saving the qualifying term *old*) was called so by every man, woman, and child that spoke it; and, what is more, out of the hundreds of writers who use the term Anglo-Saxon, there is scarcely one who would deny the fact. That it has not always stood in full prominence before their eyes may be admitted; for, until the question of adoption was raised by the criticism of the present time, there was no great occasion to consider it. But that the English in its older forms is neither more nor less than Old English is a statement which is less likely to be questioned as untrue than ignored as a truism.

It may also be admitted that the principle of separation of the older and newer stages of a language which is one and the same throughout, by different names, is, if taken by itself, more bad than good, especially when the case in favour of uniformity is as strong as it is in our own; for it by no means follows that, because we called the Anglo-Saxon Old English, we should call the Latin Old Italian. The argument in favour of the former practice lies not only in the relations between the two forms of speech,—for, so far as this is the case, the parallelism of the Latin and the Italian holds good,—but in the fact of the Anglo-Saxons having themselves used the word English; the Romans, on the contrary, having called their language not Italian but Latin. It cannot, then, be said that the arguments in favour of the innovation prove too much.

Thirdly, it is not pretended that Anglo-Saxon is an unexceptionable term; indeed, it may be admitted that, to some extent, it is a dangerous one; one that may deceive those who use it carelessly. It suggests the notion of two languages; the Angle of the English proper and the Saxon of some allied, but different, population; out of the union of which a third form of speech was the product. Assuredly this is a great mistake; so great that, if it were not easily guarded against, it would be enough of itself to condemn the term; indeed, if any one has really been misled by it, he is fully justified in all the dislike to it he may display. It may be said in its favour that its true import is easily explained. It may be said against it that the very fact of its requiring explanation (which will soon be given) is condemnatory.

To an ordinary reader the compound characters of words like Old-Saxon and Anglo-Saxon are suggestive; and still more suggestive are they to those who are familiar with the language of the writers on Natural History, the cultivators of even the literature of Botany and Zoology. *Saxon* strikes us as a generic name, modified or limited in its import by its prefixes. There is the Saxon of the kind denoted by *Old*, and a Saxon of the kind denoted by *Anglo*: there is the Saxon of the British Islands, and the Saxon of the German part of the Continent; or, at least, of that part of Europe which touches the German frontier. What was its original signification as such? It is important to determine this. Ecbert and Ina may have been Saxons in the way that Themistocles and Pericles were Greeks, or in the way that they were Hellenes. They may have been Saxons in the way that Nelson was a British sailor, or in the way that he was an English peer. They may have been Saxons in the way that Montezuma was a Mexican, or that Juarez is a Mexican. In the one case they bear the name by which they designated themselves, in the other the name by which they were designated by some one else; and just as a native of Hanover, when he speaks of himself, is a *Deutscher*, so is he, when spoken of by a foreigner, an *Allemand*, a *Tedesco*, or a *German*. But it is a waste of time and paper to enlarge on a distinction so common as that between a native name, and a designation applied by strangers. There are few nations or languages which fail to illustrate it.

Now *Saxon*, if we look to evidence rather than to opinion and authority, has no claim to be considered as an original German name applied by the Germans to themselves. It is sought in vain in Strabo; sought in vain in Tacitus. The first writer who gives it is Ptolemy; and Ptolemy applied it to occupants of three islands off the coast of Holstein. In later writers it occurs more freely; and I am not prepared to deny

that the populations to which it applies are, as a general rule, almost certainly Germans; indeed, for the sake of argument, I may admit as much in the case of Ptolemy. But neither this nor more than this would prove that any German (except so far as he had adopted it in the way an Englishman has adopted *Briton*) could prove that the name was applied by any Germans to themselves. The fact seems to be this; the occupants to the north of that part of Germany who had received some portion of the Roman and Gallic civilization, which in the third and fourth centuries might be called Imperial, and in the seventh and eighth Christian, called their ruler, their more independent, their hostile and their pagan frontagers by that name; the *native* names being Frisians, Angrivarians, Angles, or the like. In other words, the populations in question called themselves, as is generally the case with rude nations, by particular names, whilst they were known to their neighbours by a general one. The name thus given was adopted by the Romans and the Britons; till, finally, under the Frank empire, it meant the pagan and unreduced part of Germany. In the time of Charlemagne, though a great part of Saxony was really German, a great part was Slavonic; Upper Saxony was certainly so; and so, at least, were Luneburg, Mecklenburg, Lauenburg, and part of Holstein; and I submit that it was only as the Frank conquests extended northwards that the difference between Slave and Saxon became definitely recognised. Even in England, where the names Wessex, Essex, Sussex, and Middlesex sufficiently show that the name was adopted by the English themselves, it will be found that it was just in that part of England where either Frank or British influences lay on the frontier that the name prevailed.

The writer from whom we get the first instance of the compound term Anglo-Saxon is Paul Warnefrid, Paul the Deacon, or Paulus Diaconus, the historian of the Lombards. He wrote in the ninth century, after the conquest of Lombardy by Charlemagne, but before the completion of the conquest of Northern Germany by the Franks. By Anglo-Saxon he means the Saxon of England as opposed to the Saxon of Lower Saxony, i.e. Westphalia, parts of Hanover, and other districts of Northern Germany. When these latter dialects ceased to be spoken, in other words when the Saxon of the Continent became extinct, the import of the term lost much of its original clearness. Hence, at the present time, *Anglo-Saxon* generally suggests the notion of a mixture of Angle and Saxon. The import of the compound *Semi-Saxon* will be explained in the sequel.

Translation of Extract (p. xxiv.).

I. At the time that the Goths of the Scythian stock against the Romans raised war, and with their kings (Radagaisus and Alaric they were hight), broke the burg of Rome, and all the kingdom of Italy that is between the mountains and Sicily the island brought under control; and then, after the aforesaid kings, Theodoric took to the same kingdom. This Theodoric was an Amaling. He was a Christian, though he continued in the Arian error. He promised the Romans his friendship, so that they might retain their old rights. But this promise he very evilly performed, and very cruelly ended with much sin; so that in addition to other numberless evils he ordered the Pope John to be slain. There was a certain consul, that we called Heretoga. Boethius he was hight. He was in book-craft and in all the morals of the world the most rightwise. He then understood the manifold evil that the king Theodoric did against Christendom and against the senators of Rome. He then bethought himself of their privileges and old rights which they had under the Cæsars their old lords. Then began he to consider and learn within himself how he might remove the kingdom from the unrighteous king, and bring it under the control of the orthodox and righteous. He sent then secret errand-writings to the Cæsar at Constantinople, there is the high burgh of the Greeks and their king-stool; for that the Cæsar was the original lord of their kind, they bade him that he should sustain them to their Christianity and their old rights. When the cruel king Theodoric understood this, he ordered him to be brought into prison and locked therein. When it so fell out, that the venerable man was in such mickle straits, then was he so much the more troubled in his spirit (mood) as his spirit before was the more given up to the customs of the world, and he then thought of no comfort within the prison; but he fell groveling down on the floor and stretched himself out very unquiet, and, out of spirit, began to bewail himself and thus singing, quoth—

II. 'The lay that I wretch of yore lusty sang I shall now sighing sing, and set it to such unright words, though I whilom of yore found fit ones; but I now weeping and sobbing miss the right words. The joys of this untrue world blinded me, and deserted me thus blind in this dim hole. They bereaved me of each joy, though I ever best trusted them, they turned their back on me and wholly departed from me. Why should now my friends say that I were a happy man? how may he be happy who on the happiness may not persevere.'

III. 'When I,' quoth Boethius, 'this lay had sung, there came there to me heavenly Wisdom, and my mourning

spirit with his words greeted,' and thus quoth: "What! art not thou he who in my school was fed and taught? And whence becomest thou with the sorrows of this world thus much weakened; but that thou hast too quick the weapons forgotten which I erst taught thee?" Then called Wisdom, and quoth, "Depart, now, accursed world-sorrows from the mind of my servant; for you are the greatest scath. Let him turn back to my lore." Then went Wisdom near,' quoth Boethius, 'to my mourning thought, and upreared it lying prostrate ever so little, dried my spirit's eyes, and asked it with blithe words, whether I knew his foster-mother; whereto my spirit turned again; then it knew very clearly its own mother, that was Wisdom that for a long time before fostered and taught, but it perceived its lore much torn and broken up with idle hands, and asked it how that came to be. Then answered Wisdom and said, that his young ones had so torn it, and that they tugged so that they should have it all; but they will be gathered in many ways foolish in their presumption and their pride, unless each of them turn back to their amendment.

NOTE E.

Anglo-Saxon Metre.

The earliest known samples of Anglo-Saxon poetry, with definite dates, are the following; both being from Beda. The first, with a curious account of its origin, is given as the inspired composition of a shepherd named Ceadmon; of whose works, fragment as it is, it is the only *undoubted* specimen; a longer poem generally quoted under his name, a paraphrase of the Book of Genesis and some other parts of Scripture, being by no means universally recognised as genuine. Of the two texts, the first, or the one commonly published, is from Wheloc's edition of Alfred's translation of Beda's Ecclesiastical History; the second is from a transcript, by Mr. Bradshaw, of the Moore MS. of Beda, in the University Library at Cambridge. The Death-bed verses, or Last Words of Beda, are from a MS. at St. Gallen.

It may be added that these, as verses with a date, are not only the oldest known specimens of Anglo-Saxon metre, but of Alliterative metres in general; Alliterative being the term applied to the poetry of the times under notice.

The details of the structure of the Alliterative metres are somewhat complex; the length and division of the lines, their continuity or arrangement in stanzas, the minor divisions in the way of breaks, pauses, or cæsuras, and the latitude allowed in the way of initial letters, being, among others, points upon which (in respect, more especially, to the versification of the old Norse poems) much has been written. The leading principle, however, of Alliteration, or Initial Assonance, when put in its most general form, is of the simplest. Out of a certain number of words, two or more must begin with an accented syllable beginning with the same letter; the vowels being treated as a single consonant.

The following, a fraction of a fragment, is from an important and interesting addition made to the mythic poetry of our ancestors by the discovery of a fragment of a poem (which the discoverer calls King Waldere's Lay), by Professor Stephens, of Copenhagen:—

 That thou shalt, one of two things,
 Life lose
 Or long
 Doom own among men.
 Ælfhere's son !
 Never, I thee, friend mine,
 In words say that
 I thee saw
 At the sword-play
 Through cowardice
 Of any man
 War flinch-from,
 Or to the wall fly,
 Your body guard,
 Though of loathed-ones many
 Thy helmet-ham*
 With bills hewed.
 But thou ever further
 To fight soughtest
 A mark over the march (boundary),
 Therefore I, for thee, Lord, dread
 That thou too rashly
 To fight seekest,
 At the (?) stall
 Of the other man
 In his battle-array.
 Honour thyself
 With good deeds
 Far as thy means reach.
 Mourn not thou for the sword,
 That was of treasures (the) choice,
 Given as . . . to us two.
 Therefore thou to Guidhere
 Shall his threat turn-aside
 For that he these wars
 Began with un-right
 First to seek.

The chief Anglo-Saxon poems are *Beowulf*, a mythical epic or romance; the *Battle of Finnesburh*, a fragment of the same kind; historical poems interspersed in the prose text of the chronicle; *Judith*; the *Death of Byrthnoth*; *Helena*; *Andreas*; the *Traveller's Song*; the poems of the *Codex Exoniensis*; the doubtful *Ceadmon*; a *Menology*; a *Legend of St. George*; and others of less importance. The Old-Saxon *Heliand* is also in metre.

NOTE F.

Transition from Anglo-Saxon to English.—The Edwards.—Lancastrian Stage.—Continuation.—Literary English.

For the history of the English language during the period between the Conquest and the reign of Edward I., three works of adequate magnitude and importance stand out prominently from among the otherwise fragmentary literature of this period, and serve us as guides; partly from the simple fact of their comparative bulk, and partly because they give us three approximate dates. The first of these is that part of the Anglo-Saxon Chronicle from which the long extract of pp. xxix.—xxxi. has been given; and this, with the exception of a few additional sentences, is the one with which the work ends; the death of Stephen being the last important notice it contains. That it is not earlier than the reign of Henry II. is plain: how much later is another question. The character of William the Conqueror was drawn by a contemporary; inasmuch as the writer specially states that he had seen him and been at his court. Now the language in which this was delivered has never been separated by any conspicuous characteristics from the ordinary Anglo-Saxon of the writers undoubtedly prior to the Conquest. Nor are the signs of a newer style indicated before A.D. 1122. Then, however, a change sets in; and certain entries are interpolated with matters embodied in either newer language or the language of a different part of England; the country about Peterborough giving the district of the dialect most usually assumed, and the one supported by the most influential authorities. With this form of speech the work ends; *Semi-Saxon* in the way of stage, and *Mercian* in the way of dialect, being the terms most commonly in use by those who deal most minutely with the facts that the composition under notice most especially illustrates.

Translation of Extract (by Thorpe, in the Record Office Series. The Notes also by Thorpe).

A.D. MCXXXVII. In this year king Stephen went over sea to Normandy, and was there received; because they imagined that he would be such as his uncle was, and because he had got his treasure; but he distributed it and scattered it foolishly. Much had king Henry gathered of gold and silver, and no good was done for his soul thereof. When king Stephen came to England (A.D. 1139), he held an assembly at Oxford, and there he took the bishop Roger of Salisbury, and Alexander bishop of Lincoln, and the chancellor Roger, his nephew, and put them all into prison, till they gave up their castles. When the traitors perceived that he was a mild man, and soft, and good, and did no justice, then did they all wonder. They had done homage to him, and sworn oaths, but had held no faith; they were all forsworn, and forfeited their troth; for every powerful man made his castles, and held them against him; and they filled the land full of castles. They cruelly oppressed the wretched men of the land with castle-works. When the castles were made, they filled them with devils and evil men. Then took they those men that they imagined had any property, both by night and by day, peasant men and women, and put them in prison for their gold and silver, and tortured them with unutterable torture; for never were martyrs so tortured as they were. They hanged them up by the feet, and smoked them with foul smoke; they hanged them by the thumbs, or by the head, and hung fires on their feet; they put knotted strings about their heads, and writhed them so that it went to the brain. They put them in dungeons in which were adders, and snakes, and toads, and killed them so. Some they put in a 'crucet hūs,' that is, in a chest that was short, and narrow, and shallow, and put sharp stones therein, and pressed the man therein, so that they brake all his limbs. In many of the castles were [instruments called] a 'lād and grim' (loathly and grim); these were neck-bonds, of which two or three men had enough to bear one. It was so made, that is [it was] fastened to a beam; and they put a sharp iron about the man's throat and his neck, so that he could not in any direction sit, or lie, or sleep, but must bear all that iron. Many thousands they killed with hunger; I neither can nor may tell all the wounds or all the tortures which they inflicted on wretched men in this land; and that lasted the nineteen winters while Stephen was king; and ever it was worse and worse. They laid imposts on the towns continually, and called it 'censerie:'¹ when

¹ In the MS. 'tenserie.' Censerie is, no doubt, the same as 'cens,' in Low Latin *censaria*, 'rente seigneuriale et foncière, dont un héritage est chargé envers le seigneur du fief d'où il dépend.'—Roquefort, *Glossaire Romain*.

the wretched men had no more to give, they robbed and burned all the towns, so that thou mightest well go a day's journey and thou shouldst never find a man sitting in a town, or the land tilled. Then was corn dear, and flesh, and cheese, and butter; for there was none in the land. Wretched men died of hunger; some went seeking alms who at one while were rich men; some fled out of the land. Never yet had more wretchedness been in the land, nor did heathen men ever do worse than they did; for everywhere at times they forbore neither church nor churchyard, but took all the property that was therein, and then burned the church and altogether. Nor forbore they a bishop's land, nor an abbot's, nor a priest's, but robbed monks and clerks, and every man another who anywhere could. If two or three men came riding to a town, all the township fled before them, imagining them to be robbers. The bishops and clergy constantly cursed them, but nothing came of it; for they were all accursed, and forsworn, and lost. However a man tilled, the earth bare no corn; for the land was all fordone by such deeds: and they said openly that Christ and his saints slept. Such and more than we can say, we endured nineteen winters for our sins. In all this evil time abbot Martin held his abbacy twenty winters and a half year, and eight days, with great trouble; and found the monks and the guests all that behoved them, and held great charity in the house; and notwithstanding, wrought on the church; and added thereto lands and rents, and greatly endowed it, and had it provided with vestments,¹ and brought them (the monks) into the new monastery, on St. Peter's mass-day, with great worship. That was in the year from the incarnation of the Lord MCXL, from the burning of the XXIII. And he went to Rome, and was there well received by pope Eugenius,² and there got privileges: one for all the lands of the abbacy, and another for the lands which are adjacent to the church dwelling;³ and if he might have lived longer, he meant to do so for the treasurer's dwelling. And he got back the lands that powerful men held by force: from William Malduit, who held the castle of Rockingham, he obtained Cotingham and Easton; and from Hugo of Walteville he obtained Irlingborough and Stanwick; and from Oldwinkle sixty shillings every year. And he made many monks, and planted a vineyard, and made many works, and rendered the town better than ere it was; and was a good monk and a good man, and therefore God and good men loved him. Now we will say a part of what befel in king Stephen's time. In his time the Jews of Norwich bought a Christian child before Easter, and tortured him with all the same torture with which our Lord was tortured; and on Longfriday⁴ hanged him on a rood in hatred⁵ to our Lord, and afterwards buried him. They imagined that it would be concealed, but our Lord showed that he was a holy martyr. And the monks took him and buried him honourably in the monastery; and through our Lord he makes wonderful and manifold miracles, and he is called St. William.

An. MCXXXVIII. In this year came David, king of Scotland, with an immense force to this land: he would win this land. And against him came William, count of Albemarle, to whom the king had intrusted York, and two other chief men,⁶ with few men, and fought against them, and put the king to flight at the standard and slew very many of his followers.

An. MCXXXIX.

An. MCXL. In this year king Stephen would take Robert earl of Gloucester, the son of king Henry; but he could not, for he was aware of it. Afterwards in Lent, the sun and the day darkened about the noontide of day, when men were eating, and they lighted candles to eat by; and that was on the XIIIth of the Kal. of April (Mar. 20th). Men were greatly wonderstricken. After that died William archbishop of Canterbury; and the king made Theobald archbishop, who was abbot of Bec. After this waxed a very great war betwixt the king and Randolf earl of Chester; not because that he gave him not all that he could ask from him, as he did to all others; but ever the more he gave them, the worse they were to him. The earl held Lincoln against the king, and took from him all that he ought to have. And the king went thither and besieged him and his brother William de Roumare in the castle. And the earl stole out, and went after Robert earl of Gloucester, and brought him thither with a great force; and they fought obstinately on Candlemas-day (Feb. 2nd) against their lord, and took him; for his men deserted him and fled. And they led him to Bristol, and there put him into prison, and . . . Then was all England stirred more than ere it was, and all evil was in the land. After that came King Henry's daughter, who had been empress of Almaine, and was now countess of Anjou, and come to London; and the London folk would take her, and she fled and lost thus much.⁷ Afterwards the bishop of Winchester, Henry, the brother of king Stephen, spoke with earl Robert and with the empress, and swore oaths to them that he never more would hold with the king his brother, and cursed all the men

¹ Or, perhaps, *had the walls adorned with hangings*. The meaning is very doubtful.

² Eugenius II. did not reign till 1145.

³ Probably the inhabited part of the abbey, as distinguished from the abbey-church.

⁴ The Scandinavian nations still say *Langfredag* for Good-Friday.

⁵ For 'lune' of the text I suspect we should read *lâðe*, *hate*.

At p. 382 of the text there is apparently a similar error of 'lof' for *lâð*.

⁶ Perhaps Roger of Monbrai and Walter Espec.

who held with him; and said to them, that he would give Winchester up to them, and made them come thither. When they were therein, then came the king's queen with all her strength and besieged them, so that there was great hunger therein. When they could no longer hold out, they stole out and fled. And they without were aware, and followed them, and took Robert earl of Gloucester, and led him to Rochester, and there put him in prison; and the empress fled to a monastery. Then went wise men betwixt the king's friends and the earl's friends, and so agreed: that the king should be let out of prison for the earl, and the earl for the king, and they so did. After that, the king and earl Randolph agreed at Stamford, and swore oaths, and plighted troth, that neither of them should prove traitor to the other; but it stood for naught; for the king afterwards took him at Northampton, through wicked counsel, and afterwards, through worse counsel, he let him out, on the condition that he should swear on a relic, and find hostages, that he would give up all his castles. Some he gave up, and some he gave up not; and then did worse here than he should. Then was England much divided; some held with the king, and some with the empress; for when the king was in prison, the earls and the great men imagined that he never more would come out; and agreed with the empress, and brought her to Oxford, and gave her the burgh. When the king was out, he heard that say, and took his force, and besieged her in the tower; and she was let down by night from the tower with ropes, and she stole out and fled, and went on foot to Wallingford. After that she went over sea, and they of Normandy all turned from the king to the count of Anjou, some voluntary, some by compulsion, for he besieged them till they gave up their castles; and they had no help from the king. Then went Eustace, the king's son, to France, and took the king of France's sister (Constance) to wife, imagining to get Normandy thereby; but he sped little, and by good right, for he was an evil man, for wheresoever he was, he did more evil than good. He robbed the lands, and laid great imposts on them. He brought his wife to England, and put her in the castle of . . . a good woman she was, but she had little bliss with him, and Christ would not that he should long rule; and he died, and his mother also; and the count of Anjou died, and his son Henry succeeded to the county. And the queen of France parted from the king, and she came to the young count Henry, and he took her to wife, and all Poitou with her. He then went with a great force to England, and won castles; and the king went against him with a much larger force; and yet they fought not; but the archbishop and the wise men went betwixt them and made this agreement: that the king should be lord and king while he lived; and after his day Henry should be king; and he should hold him as a father, and he him as a son, and peace and concord should be betwixt them and in all England. This and the other compacts which they made, the king, and the count, and the bishops, and all the powerful men, swore to observe. The count was then received at Winchester, and at London with great worship; and all did him homage, and swore to hold the pacification. And it was soon a very good pacification, such as never had been before. Then was the king stronger than he ever was before; and the count went over sea; and all folk loved him; for he did good justice and made peace.

The second work, also called Semi-Saxon, is the long poem, in a mixture of rhyming and alliterative lines, by Layamon; the Brut, a chronicle of the more than half fabulous events which took place between the landing of Brutus, the son of Anchises and the eponymus of Britain, and A. D. 689, the year of the death of Cadwallader. Though in some places an expansion, and in others a condensation, of an Anglo-Norman poem on the same subject and with the same title, it is remarkable for the vernacular character of its language. The writer was a native of Worcestershire. Hence, though his language can scarcely be considered the representative of the exact dialect of the classical Anglo-Saxon, or the dialect of Wessex (probably of the western parts of it), it is a near approach to it.

And he gave it to the noble

The high king.
Layamon laid these books,

 Gracious to him be the Lord.
 Feather he took with fingers,
 And (?) wrote on the book-skin
 And the sooth words
 Set together,
 And the three books
 Compressed into one.

Of this poem there are two texts, written in different parts of England. Such, at least, is the generally admitted doctrine by which a notable difference of language between the two is accounted for. Another way of accounting for it would, of course, be a difference of date; indeed, it is likely that to a difference of locality or dialect, a difference of date or stage may be superadded. The date is somewhere about A.D. 1205.

The third work, one, like the Chronicle, in prose, takes its name from the word *ancra*, meaning *female anchorite* or *nun*; its genitive plural, in the language of the time in which it was written, being *ancren*. To this add *riwle*, from *regula*, and you get the *Ancren Riwle*, its title. It is only of late that the *Ancren Riwle* has commanded much attention; in this respect standing in contrast with its two predecessors in this sketch. It is a disciplinary manual for nuns. In the opinion of the few who, until Mr. Morton's publication of the edition of 1853, had troubled themselves about the work, the author of it was Simon of Ghent, who died Bishop of Salisbury A.D. 1315; an authorship which, in the way of chronology, would make it so much later than it is made either by the character of the language or the well-supported opinion of the editor, as to deny it a place among the compositions of the Semi-Saxon period, and to give it one among those of the so-called Old English. But the introduction claims it as the work of Bishop Poor (Bishop of Chichester, Salisbury, and Durham), who died in 1237; Poor being an old West-country name, and Dorsetshire being the county in which stood the religious house for the inmates of which it was written. If written before the last twenty years of the author's life, as, from the order of his episcopal translations, we may fairly suppose was the case, it would be but little later than the Brut, with which it would, in the main, agree in dialect, or differ from it only as the older form of the Dorsetshire, might differ from the older form of the Worcestershire, English. It would also be a very direct representative of the classical Anglo-Saxon of Wessex. Call the group what we may, it is in the same group with the Brut. It has the credit of being more dashed with Anglo-Norman words than the work of Layamon. This is, doubtless, the case. It must be remembered, however, that in a work of a religious character, and especially in one dealing with the details of the religious observances, it by no means follows that everything which differs from the Anglo-Saxon, considered only as a German language, is other than Anglo-Saxon in the ordinary sense of the term. The amount of Latin taken directly from the ecclesiastical

writers of the Anglo-Saxon of the time before the Conquest is large; and it is more especially large in all matters connected with religion. The title alone suggests this view. Neither *Ancren* nor *Riwle* is more Anglo-Saxon than such words as *material* or *corporeal* are English, yet they are as much so; in other words, they are Latin terms naturalized in England. Hence, when we attempt to measure the Norman element in the *Ancren Riwe*, we must omit all words that are common to the Anglo-Norman and the Anglo-Saxon.

Ge ne schulen eten vleschs ne seim buten ine muchele secnesse; oþer hwo so is euer feble etep potage blipeliche; and wunep ou to lutel drunch. Notheleas, leoue sustren, ower mete and ower drunch hauep ithuht me lesse þen ich wolde. Ne ueste ge nenne dei to bread and to watere, bate ge habben leaue. Sum ancre makep hire bord mid hire gistes wiputen. That is muche ureondschipe, uor, of alle ordres þeonne is hit unkiundelukest and mest azean ancre ordre, that is æ dead to the worlde. Me hauep iherd ofte siggen þet deade men speken mid cwike men; auh þet Leo eten mid cwike men ne uond ich neuer zet.

The same in English.

Ye should not eat of flesh nor seam (lard) but in mickle sickness; or whoso is ever feble eateth pottage blithely, and use yourselves to little drink. Natheless, dear sisters, over mete and over drink I have thought me less than I would. Fast not any day on bread and water, but (unless) ye have leave. Some anchoresses make their board with their feasts without. That is much friendship, for of all orders then is it the most unfit and most against anchoresses order that is dead to the world. One has heard oft say that dead men speak with quick men, but that they eat with quick men never found I yet.

Such are the three chief undoubted Semi-Saxon works, to which a few more, of less importance and with less definite dates and localities, may be added. A fourth work is of a more doubtful character. Its date is unknown. Still it is often called Semi-Saxon. The district in which it was written is also unknown. The name of the author, Ormin or Orm, from which the work is known as the *Ormulum*, is Danish. The counties in which the occupancy of the Orms has left the chief traces are Lincolnshire, where the name is common, and Lancashire, where we have the town of Ormskirk.

Of all the compositions attributed to this stage of our language, the *Ormulum* is the most English; indeed, so truly is it this, that the editor admits that its language is less archaic than the handwriting and the other details of the solitary manuscript in which it has come down to us.¹ Perhaps, however, it seems more modern than it is. It certainly reads easy for a work of the time of King John, or even for one written under Henry III. or his successor. But the matter (it is a series of homilies) is simple, and the same ideas, as well as the same lines, often repeat themselves. Again, its spelling is remarkably regular; though we may set off against its regularity the fact of its being that of an orthographical innovator. The principle so common in the modern English, and indeed, with few exceptions, common elsewhere, of denoting the shortness of a vowel by doubling the consonant which follows it, though not originated by Orm, is adopted by him so explicitly, is proclaimed so decidedly, and is applied so systematically, that, as a point of early English orthography, it may be almost identified with his name. The passage in which he alludes to it, often as it has been quoted, will bear repetition; serving, as it may do, both as evidence to the author's principles, and as a specimen of his language:—

And whase willen shall this booke
Eft other siþe writen,
Him bidde ic that he 't write right,
Swa sum this book him teacheth,
All thwert out after that it is
Upo this firste bisne
With all suilk rime als here is set
With all se fele wordes
And tat he looke well that he
An bookstaff write twigges
Eywhere there it upo this book
Is writen o þat wise.

And whoso shall wish this book
After(wards) (an)other time (to) write
Him bid I that he it write right,
So as this book him teacheth
All athwart (through) out after that (what) it is
Upon this first example
With all such rhyme as here is set
With all so many words
And that he look well that he
A letter write twice
Wherever there (where) it upon this book
Is written on (or in) that wise

¹ A very high authority considers that even the antiquity of the MS. may be exaggerated.

Loke he well that hét write swa
 Forr he ne magz nought elless
 On Ennglissch writenn rihht te word,
 That wite he well to soothe.

Look he well that he it write so
 For he may not else
 On (in) English write the word
 That know he well to (for) sooth.

The first notice of the English as opposed to the Anglo-Saxon is conveyed in the following charter from the fourth volume of Kemble's *Codex Diplomaticus Ævi Saxonici*. Its date is A.D. 967¹; but this is only the date of the original; the Rubric expressly telling us that the present text is not only a translation, but a translation from the Saxon into the English, a fact which shows us what our language was called, as well as what it was, when contrasted with the earlier form of speech. The date of the translation (for so it is called) is unknown.

This is the oldest instance of a distinction between the words English and the Saxon as applied to our language. The record which generally passes for the oldest specimen of the Old English, as opposed to the Semi-Saxon, is the following proclamation:

With the reign of Edward I. begins a consecutive series of authors, of whom the names, dates, and birthplaces are sufficiently known to enable us to follow the details of the language in respect to both stage and dialect: viz. Robert of Gloster, a west-country, Robert of Bourne (in Lincolnshire), an east-country, and Richard of Hampole near Doncaster, a north-country writer; the manuscripts of whose work, the *Pricke of Conscience*, which have the credit of best representing the language of the composer, give us a form of speech which, though we may call it Northumbrian English, is, as far as the history of the literary English is concerned, more Scotch than South-British. On the other hand, Robert of Gloster is in the same class with the *Layamon* and the author of the *Ancren Riwe*, i.e. a continuator of the West-Saxon literature; Robert of Bourne being best compared with the last compiler of the *Saxon Chronicle*, who is supposed to have been a monk of Peterborough. William of Shoreham, in the reign of Edward II. seems to have belonged to Sussex. A few of the earliest metrical romances belong to this period; *Havelock the Dane* being, perhaps, a representative of the language of Lincolnshire, and, as such, of a Danish district; north, however, of the parts represented by Robert of Bourne. The *Owl and Nightingale*, by Nichol Guild, appears to belong to Surrey.

Passing over a few writers of less note, we come, in the reign of Edward III., to the contemporaries of Chaucer; one of whom, Laurence Minot, like Hampole, is Northumbrian; and another, Wycliffe, decidedly conspicuous for Northern characteristics. Meanwhile, the author of *Piers Plowman's Vision* is a West-countryman, and Trevisa a Cornish man by birth, but a Gloucestershire man by residence.

It is to the fourteenth century, at the earliest, that the metrical specimens of pp. xxviii. xxix. and xxxi. are to be referred. It has long been pointed out by the commentators that, as a general rule, earlier specimens of English poetry have been made too old, by about a century, both by Johnson in the notices under consideration, and by Warton in his *History of English Poetry*.

The reigns of the three Henries give a convenient as well as a natural division. They begin with the fifteenth century. They (nearly) begin and end with the Lancastrian dynasty. In a merely artificial arrangement these would merely be points which addressed the memory. But a natural system requires something more; and this the reigns under notice supply. The introduction of printing, and the active lifetime of Caxton as a printer, coincide with the accession of the House of York pretty closely; and with printing we get a new influence inaugurating a new stage. At the same time it is not to be hoped that the lines of demarcation on either side will be clear and definite. On the contrary, we must expect slight shades and faint lines of two transitional periods. On the side of our literature—for though the two by mutually acting and reacting upon one another are never to be wholly isolated, they can generally be kept more or less apart—they are, indeed, more decided than on the side of language; yet even the literatures change their character by degrees. Why it was that after the age of Chaucer, and Wycliffe, and Mandeville, not to mention others of less worth, there was a period of comparative sterility, lies beyond the field of our enquiry. It is only certain that such was the case. The language, however, changed its character more imperceptibly.

In respect to this the paramount and primary fact is the extinction, as a concurrent language, of the Anglo-Norman. For all practical purposes, by which I mean its influence on the English, it was confined to the law courts. Whether one word from it was adopted through the medium of the current conversation between the noble and the retainer, between the baron and the yeoman, is a matter of doubt; or rather, the decision is a safe negative. There was intercourse between the English and the French, but it was on French ground. There was a French queen in Henry V.'s time: but this gave only the influence of a court. The language of common life, with a few uncertain exceptions, was uniform throughout the land. And so was the language of literature, save and except the legal, official, and diplomatic part of it. Under Edward III. Gower wrote in French as well as in Latin and English. An English Anglo-Norman

writer, writing for anything like an approximation to a writer for the people at large, under the Henries, has yet to be found. On the change in the character of the rulers and their courts, on the difference between the political and religious questions of the two periods, though much may be said, the saying of it has its proper place in the general history of England.

The main fact to be looked to is this; that the times produced no one whom the early printers either took or mistook for a classic; so that when the earlier works were both printed and re-printed the greater part of Lancastrian literature was left, as it has been till lately, and, perhaps, as it is at the present moment, in manuscript. Hence, it has been comparatively unknown; and, hence, the distinction between the time of Chaucer and that of Caxton seems more abrupt than it really is. Another result, and one of more importance, is the effect that the first works which passed for classics and authorities (taking printing as a starting-point) would represent the language of the penultimate rather than the ultimate portion of the preceding period; thus, apparently, bringing Chaucer and his cotemporaries nearer to the time of the Tudors by nearly three-quarters of a century, than they really were. Any writer under Edward IV., or Henry VII., who looked into the printed literature of his time for models would find them in writers who were, by no means, so near his own time as they seemed to be. The names of Hoccleve (Occleve), a poet; of Capgrave, chronicler; of Mallory, the author of the Romance of King Arthur, may be added to those given by Johnson for this period: in addition to which there are a great many anonymous compositions; both lyrical and in prose, the romances being particularly numerous.

That Caxton availed himself of his prerogative as a printer to improve the MSS. of his authors may easily be imagined. A definite piece of detail, however, upon this point is to be found in Mr. Babington's recent and valuable edition of Trevisa under the Record Office. The following list gives about one third of his innovations as catalogued by Mr. Babington from the first volume only.

Here end the commentaries upon Johnson's History. Upon the origin of the standard, or literary English, the English which the lexicographer has most especially to consider, the necessary remarks will be made in the Preface.

EDITOR'S PREFACE.

THE true Preface to the present Dictionary is that with which this volume opens; the original Preface of Johnson. Here it is where the general aim of the author is best exhibited, and where the principles that he applies to the framework of his Dictionary are best explained. That this exposition was written after the completion of the work is manifest. It is a summary of what has been done, rather than a prospectus of what was to do; dictated by the consciousness of an ascertained result, rather than by the hope of a possible one. For perspicuity of language and dignity of style, the Preface to his Dictionary is conspicuous, even among the writings of Johnson, who seems to have looked back with satisfaction upon his labours, and to have bestowed more than ordinary pains upon the Introduction, by which they were recommended to the world. His treatment of the questions concerned in the body of the work is preeminently compendious. At times, indeed, the generality of the notice may degenerate into a mere allusion. Upon the whole, however, though no question is exhausted, few questions are untouched. On the other hand, the History of the English Language is little more than a sketch. It stands, however, in the present edition as it stood in the previous ones, followed by Todd's Continuation and by Notes by the present Editor.

Preface and
History by
Johnson.

Todd's preliminary notices, consisting of an Advertisement¹ and two Introductions,² are chiefly devoted to an enumeration of the authors whom he investigated for examples, and the names of the correspondents from whom he had received either direct or indirect assistance. It preserves the names of some of the students of the time; and notifies the inspection of an interleaved copy of the Dictionary with remarks by Malone; as well as of one belonging to Horne Tooke, with marginal annotations. These give the most conspicuous of his authorities. Of his personal correspondents, several were communicative, and some may have proved useful. Todd, on his part, exercised a sound judgment in his selection. As three of their contributions have been inspected by the present editor, he will enlarge upon them, though it be only to say that he has found little which he blames his predecessor for omitting. A list of words written on separate cards, to which Todd alludes, seems to have been meant for an *Index Vitandorum*, rather than aught else. A dictionary of Mr. Eyre's, with marginal annotations, though it contains many new extracts, too often refers us either to periodicals, wherein the author is anonymous, or to some novelist, equally anonymous, and even more ephemeral. There is no reason, however, why words thus indicated should not be useful; and a certain proportion of them is almost sure to be so. The floating language of the day is thus preserved; and this the worst literature best exhibits. Todd, perhaps from courtesy rather than conviction, though there are many which he scruples to adopt, thinks it possible that at no distant period some may demand admission by an increase of currency and authority. Of extracts, however, that justify such an expectation, I have found but few. The rest are, in the main, what Todd calls 'eccentric terms' by 'questionable writers,' expressing 'common conceptions.' I follow his example in rejecting most of these. For the opportunity of using these two collections, I have to thank the publishers. With an inspection of Horne Tooke's own copy of Johnson, with notes, I have been courteously favoured by Lord Overstone. This, also, had been previously inspected by Todd, who left me but few gleanings. The notes, as may be expected, run chiefly upon the Anglo-Saxon etymons; and of these it is well known that the annotator took a view, in which, though there was some truth, there was much exaggeration. Many critics have lamented that Johnson's great labours had not devolved upon Tooke.

Preliminary
Notices.

I join in no such regrets. Northern philology, which, save and except his manifest incuriousness concerning the language of Science, as opposed to that of Literature, was certainly Johnson's weakest point, is generally supposed to have been Horne Tooke's strongest. I am not prepared either to affirm or deny this. I only submit, that as far as the mere knowledge of certain Anglo-Saxon words which represent certain English ones in an older form is concerned, Johnson's knowledge was adequate. When he is wrong, it is, generally, in the imaginary Latin and Greek parallels which he superadds. These Tooke would, perhaps, have avoided; but he would certainly have given us numerous equally unsubstantial superfluities in their place. This is a point which my predecessor has touched upon; and having noticed it accordingly, I take leave of the materials in the reference to which I have gone over the same ground as my predecessor.

The Five
Points.

For the principles on which the present edition has been constructed, a reference, made haphazard, to any word which either it or the previous ones may contain will serve as a preliminary. Let us see how the notices stand; we may call them the Five Points.

We have,—I. The word itself in alphabetic order, with its accent; i.e. the Entry. II. The Abbreviation, as *adv.*; showing what it is as a Part of Speech. III. The Derivation. IV. An Explanation of its Meaning. V. A Quotation, or Extract; not only serving as evidence to the actual use of the word in literature, but also giving a context by which the explanation is improved.

Except where the derivation, on the strength of its having been given under some closely allied word, is omitted, and in a very few other cases, where no extract at all is appended, these five notices occur under every entry.

As the arrangement of the words in a dictionary, from its alphabetic character, is by no means natural, but on the contrary preeminently artificial, I shall take these five points article by article, in the order in which they stand; premising that I do this simply because the notice of them is part of a dictionary. It would be more scientific, and, to the writer, more convenient, to allow the arrangement to be somewhat more natural, and to take some of them together: for instance, the notice of the word as a Part of Speech is naturally connected with the notice of the Explanation of its Meaning and that of the Extract by which that meaning is illustrated; and if this arrangement were followed some few repetitions might be spared. Upon the whole, however, it is best to keep each notice separate, and to treat the details exactly according to the order in which they stand in the body of the work.

I. ENTRY.
Arrangement
alphabetic.
Apparent
exceptions.

I. The arrangement of the words is, of course, alphabetic. To this the only exception arises out of certain words, which are not compounds at all, being treated as if they were true compounds.

It is clear, however, that a pair of separate words in contact with one another is one thing: a pair of words united, fused, or amalgamated into a compound, another. When we say that 'a crow is a black bird,' we never mistake the words *black* and *bird* for anything but what they are, viz. two separate words in immediate juxtaposition and in close grammatical conjunction with one another, the first being an Adjective, the second a Substantive; so that they are not only two different words but two different Parts of Speech. The case, however, is very different if, talking about song birds, or birds of the thrush family, we say that the 'blackbird has a yellow bill,' or that 'the hen blackbird is brown.' Here the words *black* and *bird* are no longer separate terms, but the elements of a compound, which is a single word and a Substantive. As such it has to be recognized by the lexicographer; and, as such, it finds its place in a dictionary between *Blackberry* and *Blackcap*.

These are the position and claims of the true compound: claims which the ordinary contact of two separate words by no means establishes. The words by which we talk of the *blackness* of the crow, and the fact of the crow being a *bird*, though found in dictionaries, are found apart. In some cases, however, they are admitted; and, when this is the case, in Johnson at least, the strict alphabetic order is violated. Thus, of the words between *Black adj.* and *Blackthorn n. s.*, the last of its derivatives, the order is as follows:—

Black, <i>adj.</i>	Black-lead, <i>n. s.</i>	Black, <i>n. s.</i>	Blackberry, <i>n. s.</i>	Blackmoor, <i>n. s.</i>
Black-bryony, <i>n. s.</i>	Black-mail, <i>n. s.</i>	Black, <i>v. a.</i>	Blackbird, <i>n. s.</i>	Blacksmith, <i>n. s.</i>
Black-cattle	Black-pudding.	Blackmoor, <i>n. s.</i>	Blackcap, <i>n. s.</i>	Blacktail, <i>n. s.</i>
Black-guard, <i>adj.</i>	Black-rod, <i>n. s., n. s.</i>	Blackberried <i>Heath.</i>	Blackish, <i>adj.</i>	Blackthorn, <i>n. s.</i>

Here Black-pudding not only comes before Blackamoor, but before Black the *substantive*, and Black the *verb*: and the reason why it does so is clear enough. The words Black-bryony, &c., are dealt with as details of the adjective Black, of which they are simply examples in certain combinations. Of course those combinations have something peculiar about them; something which gives them the appearance of true compounds, and separates them from innumerable other combinations, not one of which would ever find its way into a dictionary. At present, however, they command our attention only so far as they appear to break the alphabetic arrangement, and so far as their form, which is important, is concerned.

*Alphabetic
arrangement.*

*Apparent ex-
ceptions.*

The reader will observe that none of them have any accent, and that they all show a hyphen. Meanwhile, from Bláckamoor to Bláckthorn inclusive, all the words have an accent, whilst the hyphen is wholly wanting. The accent, too, is on the first syllable. Notwithstanding this difference, the unaccented and hyphenated words are evidently treated as compounds. Black-guard is simply called an adjective, and Black-rod a substantive; not compounds of an adjective and a substantive respectively.

In the present edition the principle which gives this arrangement is adopted; except that, when there are more primary words than one, and only one of them enters into combinations of the kind under notice, the whole are kept together. Hence, the words corresponding to the preceding list run: Black *adj.*, Black *s.*, Black *v. a.*; after which, allowing for additions and omissions, they go on as in Johnson; in other words Black-pudding and Black-rod precede Bláckamoor and Bláckberry.

These remarks give us three classes of combinations:—

1. Words in mere contact, and in the usual syntactic relations of two separate words, the ordinary meaning of each word being retained. When we say that ‘all crows are black birds,’ we illustrate this.

2. Words in contact with one another, and as far as the sound of each of them is concerned, two separate words, but of which in combination the *sense* is different from that delivered by an ordinary juxtaposition. A *black-pudding* is something more than a *pudding of a black colour*. The difference between the ordinary sense and the one which attends the combination may be great or small, and is susceptible of every degree.

3. Words like *bláckbird*, in which the speciality of import may be of any degree; but in which there is a change of sound, i. e. of accent.

In these three classes we find without much difficulty an element of doubt and uncertainty; one with which all writers who have anything to do with classification are so inconveniently familiar. Between the two extreme groups there is no difficulty in drawing a distinction, whilst with the one in the centre there is indistinctness combined with ambiguity. This is because the different divisions pass into each other gradually and imperceptibly; the extremes being in strong contrast, the intermediate parts transitional and equivocal.

In the groups, then, before us, the first and last may be decided on at once. That words in mere contact have no claim to be entered separately in a dictionary few doubt; and that words like *bláckbird* have such a claim few deny. The difficulty lies with the members of the intervening division; combinations wherein there is a change of import but not of sound.

When the change of import is very slight, a word of this kind has a minimum amount of the element which determines the compound character of the words of the second class; and, when the change of import is very slight in words of the second class, it has a minimum amount of the element which distinguishes it from combinations of the first. That this creates doubts and complications is evident. The truth, indeed, is, that in asking whether a word be a compound or a pair of separate words, we sometimes take one test and sometimes another, unsteadiness of classification being the natural result. Words, however, like Black-rod are admitted by the present editor rather because he finds them in the previous editions than because he looks upon them as single words; single words being the details upon which the lexicographer more properly employs himself; leaving combinations of separate words to the grammarian. Still they stand in the dictionary, though they belong to a class which no great pains have been taken to enlarge, and

Alphabetic arrangement.

Apparent exceptions.

Accent as a test of composition.

to a class which is likely to be curtailed; for as new words press upon us, and as dictionaries grow to a size incompatible with convenience, retrenchment will have to be made in some quarter or other; and this is the one in which it will most probably be applied. Without being exactly idioms, they are idioms rather than single words.

All this shows that great stress is laid upon the accent as a test of composition. Nor is the high value thus given to it unreasonable. When two words in one relation to each other are, sound for sound and letter for letter, identical with the same two words in another relation, it is only by means of the accent that any difference between them, *in point of form*, can be created. But, except for the difference of accent, *bláck bird* and *bláckbird* would be two words, or combinations of words, of absolutely the same form; and words of the same form, meaning, and origin, are the same words. They are certainly this when we take them separately. The *black* and *bird* in *bláckbird* are, *when separated and treated as isolated words*, absolutely the *black* and *bird* of the sentence 'all crows are black birds.' United, they give a difference; but I submit that they give this difference because the union is accompanied by a change of form, the change of form itself being created by a difference of accent; and that, if it were not for this change of form, there would be no true compound. There would be contact, but only the ordinary contact of a Substantive and Adjective in the common concord of their Syntax.

The reader who objects to this view will, of course, say that though there is no change of form there is one of sense; and that, even with an identity of form, a difference of import gives different words. Here we part company; for I reasonably hope that up to this point we have gone together. To bring the matter to a point, I will suppose him to argue that the word *bláck-púdding* (a word which I have never heard sounded *bláck-pudding*), on the strength of its bearing a meaning different from that of the words *black* and *púdding* in their ordinary acceptation, is a compound; presuming that he also admits that, *if it be one*, it is the sense, and not the form, which makes it so. He will probably grant at once, that, whatever it is, it is not in the same division of the same class as *bláckbird* or *bláckberry*; I, on my part, allowing that, whatever it is, it is not in the same division of the same class with combinations like *black cloud* or *black waistcoat*. It is a member of a separate class, and that a large and important one. A very little change would place it in the same class with *bláckbird*; and that change may take place at any time. Still, it is not, at the present moment, a compound. It is not a combination of which the result is a single word. On the contrary, it is a pair of words.

Of course there is a question of definition; and it is one in which the principle, that, while differences of form can by themselves constitute different words, differences of meaning can not, is assumed. Whether this assumption be legitimate is the issue. That a certain amount of practice is opposed to it is true; inasmuch as the question whether words like *black-pudding* were compounds or not would never have been raised if no one had ever treated them as such. On the other hand, the question will probably be allowed to be one of Etymology; Etymology being especially, if not exclusively, the study of words in their external form. Of the result arising from two words in contact, yet still separate, Etymology takes no cognizance. These it relegates to the domain of Syntax, into which it comes in close contact, as the question under notice sufficiently shows; inasmuch as the words before us belong to the debatable tracts of the frontier.

How truly Etymology deals with differences of form only is better shown in the allied languages than in the English. In English our grammatical terms are classical, and we talk of *Etymology* just as we talk of a *Dictionary*, i.e. in language slightly altered from the Latin. In German, however, and in Danish, where a Dictionary is a *word-book*, Etymology is a *formlore* (*formlehre, formlære*).

So much for the theoretical part of the question. On the practical side the arguments are quite as cogent. If we admit the doctrine that change of meaning constitutes change of word, we recognize a principle which no one has as yet carried out, and which, if carried out, would be, to say the least, inconvenient. If combinations alone constitute new words (no matter whether we call them compounds or not) it is difficult to say where we must stop. At present a claim is set up on behalf of words formed by the union of Nouns with Nouns; of words which, as far as these

elements are considered as Parts of Speech, are in the category of *black + bird*. And the principle of such a claim is clear. Words like *black-pudding* take the guise of such words as *bláckbird*. But this is not the principle on which they can be supported. The principle on which they are supported must be the one just indicated; at least I have looked in vain for any other. But this, if it includes anything, includes such combinations as *make free*, *make bold*, and the like. More than this, it includes such combinations as *I have written*, *he has spoken*, not to mention many others of the same kind; not one of which has ever been treated otherwise than as a combination in Syntax rather than a combination in Etymology.

*Accent as a
test of com-
position.*

Now, if it be asked whether these are to be excluded from a dictionary, I answer no. I only deny that they are to be treated after the fashion of true compounds like *bláckbird*, and entered alphabetically as separate substantive words. That they are to be noticed I by no means deny. Though it is not the business of the lexicographer to give the meaning of (say) such a combination as *make bold*, as an independent word under a special entry, it is the practice to notice it when giving a certain import to *make* or *bold*. As it is, however, the previous editions are followed, and a compromise (which is another word for an inconsistency) is the result. Some of these quasi-compounds are entered separately, because they are so entered in Johnson. Some, for the same reason, are given under the main word. In the present edition, the reader will find *Black-mail* as an independent word: whilst *Make bold* he will find under *Bold*.

In simple truth there is no provision made by either the grammarian or the lexicographer for these words. Neither Etymology nor Syntax recognizes them. There is no name for them; no name for the class to which they belong. They partake of the nature of *Idioms*; but idioms constitute a class with many divisions and subdivisions, few of which have been carefully investigated. The main point, however, of the present argument is to show that the words in question are not single words in the way that a true compound is a single word; and that, not being this, they take the place in a dictionary of single words by sufferance and prescription only, the basis of this argument being that dictionaries allow separate entries to single words only.

It is now necessary to leave this part of the subject and to go back to a closer examination of our examples, and that with the view of deducing some fresh results from them. In *bláck bird* (each word being isolated) we have two accents. As far as we have gone we have converted it into *bláckbird*, by annihilating the second accent and letting the first stand. Yet it is doubtful whether this be the true process. The true process is to *throw back the second accent and place it in the room of the first*. Whether this be an unnecessary refinement will be seen as we go on. Whether it be the real process or an etymological fiction is another question. Individually, I believe it to be a real process, though one which it is difficult to analyze or explain. But it may, without detriment to the argument, be treated as an etymological fiction; etymological fictions being, in the present state of philology, in many cases both necessary and legitimate, or, rather, legitimate because they are necessary. If so, we may extend the rule, which hitherto has applied to combinations with *two* accents, each syllable being equally accented.

Now the annihilation of one of these accents is not sufficient; the second must be thrown back. There must be what in classical prosody we should call encliticism, inclination, or throwing back, in order to constitute a true compound.

We test this doctrine by our view of combinations in which there is only one accent, or where, if there be a second, it is subordinate to the first. A glass bottle of a *blue* colour is a *blue bottle*; and when we take the word simply, and say *blue bottle* or *blue bottles*, the accent on the *o* is much the same as the accent on the *u*; the result being *blúe bóttle* or *blúe bóttles*; in which case the words are two.

But when we talk of *flies* the word is a compound, and the accentuation *blúebottle*. The same with *blúestocking* = learned female, as opposed to a *blúe stócking* worn on the leg; and with the *bláckberry* of the *bláckberry* bush, as opposed to the *bláck bérny* of the elder or of the deadly nightshade. In all these cases there is a compound; and it is the throwing back of the accent which makes it, not the mere obliteration of one accent out of two.

*Accent as a
test of com-
position.*

And this leads us further. Anyone who looks over a list of compounds will find that the second word is the more general one of the two, and that its import is specified or particularized by the prefix.

An *earthworm* is a worm, a *rosetree* a tree, a *limekiln* a kiln, of a particular kind; and I submit that the prefixed element particularizing or differentiating the more general one is accented because it does so.

There are many apparent exceptions to this rule, and there are a few real ones. Upon the whole, however, it is one of wide application. If so, it gives us not only a test for distinguishing true from false compounds, but the ground upon which it is founded.

The next thing to look at is the way in which the two elements of a compound coalesce. With the words hitherto under consideration the first element has been an Adjective, and when this is the case there is (always saving and excepting the difference of form effected by the difference of accent) not a hairsbreadth departure from the ordinary Syntax. The Adjective (at least, in English, where Adjectives have no gender) agrees with the Substantive in *blackbird* as thoroughly as it does in *black bird*. The only difference is, that in the former case the agreement ends in a union. So it is with Substantives in a word just used, *hairsbreadth*. Whether we pronounce this *hairsbreadth*, as has just been done, and make a single word of it, or *hair's breadth*, and make two, the syntactic construction is the same. So it is with *birdseye*; whether we talk of *birdseye* tobacco, a *birdseye* handkerchief, or a *birdseye* view, as opposed to a *bird's eye*. In all these cases we have the ordinary relation between one Substantive and another, the first being in the Possessive, or Genitive, case. But what if, instead of saying *hairsbreadth*, we say *hairbreadth*, as we often do in talking of a *hairbreadth escape*? Or what if, instead of saying a *birdseye view*, we say a *birdeye view*; as so influential an authority as Burke (see the extract under the word) actually has done, and that (though he might have said *birdseye*) correctly?

In this combination the construction is different. The ordinary construction, provided that we treat both words as equally Substantival and as Substantives in the same case, places them in apposition to each other; just like such a phrase as 'Victoria, Queen;' the meaning of which is *Victoria who is the Queen*, or *Victoria under another name Queen*. Yet this is not the meaning of the first element in either of the preceding combinations. *Birdeye* does not mean a *bird* which is an *eye*; or *hairbreadth* a *breadth* which is a *hair*. The first means an *eye as that of a bird*, and the second a *breadth as that of a hair*. In other words, *bird* and *hair* take the construction of either an Adjective or a Genitive case. Hence arises a notice which will often be found in the forthcoming pages, viz. that such or such a word in such or such a combination is 'either an adjective or the first element of a compound.'

Instead of this I might have written 'a *genitive case*, an adjective, or the first element of a compound;' but the multiplication of equivalents is unnecessary. Though the government of a Genitive case by its leading Substantive is a different thing from the concord of a Substantive with its Adjective, they are both, as far as their relations to the construction under notice is concerned, in the same category. Indeed our best old grammarian, Wallis, treats the Genitive cases as Adjectives; and calls *good*, in such a combination as *good man*, an ordinary Adjective; and *man's*, in such a combination as *man's life*, an Adjective in 's.

A notice which will often present itself has now been explained, and so is the difference between two separate words and two words forming a compound and treated as one: the latter being the only ones which claim a special entry in a dictionary; the former being admitted, to a certain indefinite extent, simply because they are recognized by both Johnson and Todd; indeed they are not so much admitted as kept in.

Such is the exposition of a principle: but the principle itself takes us only over the generalities of the question. The accent itself may change. In the list lately given, *Black-guard* is treated by Johnson like *Black-pudding*, and placed between *Black-earth* and *Black-lead*; evidently because he considered that it was sounded *bláck guárd*. If it were so, its pronunciation has changed. Most of us say *bláckguard*, or rather *blággard*. At any rate, it stands in the present work in the same class with *Blackbird*. In placing it here I feel pretty certain that, in

respect to the present English, I am right. I have never, I believe, heard it pronounced as Johnson appears to have pronounced it.

*Accent as a
test of com-
position.*

The change of accent, however, as exhibited in the difference of practice between the speakers of one generation and the speakers of another, gives us but a small part of our complications. The following statements will indicate their magnitude. In the first place the division of syllables into those with an accent and those without one carries us but a little way. In the old contrast between *bláck bird* and *bláckbird*, we spoke as if the accents on the two syllables were originally at par, and as if one was either obliterated or removed, while the other stood; as if, in short, there was nothing but the alternative between accent and no accent. And this is the only way in which our Prosody allows us to speak, for we have only one accentual sign. If this appear it indicates an accent; if not, there is no alternative but to ignore its existence. But that this scarcely represents the truth is suggested by the three accents of the Greeks, and the seven or eight tones of the Chinese. I am not prepared to say that these give true accents in the English sense of the word. I only submit that they indicate something; and it is not likely that one language should have distinctions to which something analogous should not be found in others. Let us, however, suppose that accents, instead of being pure and simple units, represent a unit capable of being divided into fractions; it will follow from this that an accent may be only partially removed. At any rate, one syllable may approach the maximum amount of accentuation more closely than another. If so, an accented syllable between two others with a minimum of accent will show its accent more prominently than one between syllables more decidedly accented; and a syllable between two syllables with an approach to accent will show it less prominently. Accent, in short, is *relative*; and by changing the parts around a syllable (i.e. the other syllables) its accentuate character may be increased or diminished.

Let the reader, now, imagine that he sees the following line for the first time, and that he sees it by itself, knowing neither what precedes nor what follows it:—

Ere her faithless sons betrayed her.

How will he read it? I submit that this is an open question. I imagine that the author of *Leonidas*, who was also the author of *Admiral Hosier's Ghost*, if he could have seen the line as it stands, and knew nothing of its antecedents or consequents, especially if he were fresh from singing (as he was wont to do) his own song beginning—

Heéd, oh heéd! my fátal stóry,
I' am Hósier's injured ghóst;
Cóme to seék for fáme and glóry;
Fór the glóry I' have lóst—

would, without thinking twice about it, read—

E're her faithless sóns betráyed her.

And there is no reason why he should not do so. But I also imagine that if Moore, also fresh after singing—

Let E'rin remémber the dáys of óld—

had seen the line from Glover's ballad as given in the foregoing extract in a state of isolation, he being as ignorant as by hypothesis we made Glover of what went before and what came after, he would have read it—

For the glóry I have lóst.

Yet each would have been wrong. Glover's verse is sounded as we have written it. What Moore's is we discover from the stanza when given in full:—

Let E'rin remémber the dáys of óld,
Ere her faithless sóns betráyed her;
When Málachi wóre the cóllar of góld
Which he wón from the próud inváder.

Yet the accent throughout is on *glo-* and *faith*. What, then, is changed? The accentual relation between *ere her* and *for the*. In each of these pairs the first syllable is accented when compared with the second, but not so decidedly as not to be subordinated to the third.

Accent as a
test of com-
position.

That this fact of accentuation being in many cases a matter of degree complicates its application as a test of composition is certain; and it may be added that when the difference in accent between the two syllables is inconsiderable, it requires a good ear for language, which is no commoner than a good ear for music, to ascertain its nature. Hence there are many words between which one person can draw a difference whilst another can not.

But the great complication of all arises from the natural unsteadiness of the combinations themselves. Two words may be thoroughly fused in one, whilst the accent may notify their fusion so decidedly that anything short of deafness can perceive it. Yet the union may be repealed. As words once separated may unite, words once united may separate. *Teacup* and *teapot* are probably words concerning the accentuation of which there is as little doubt as there is concerning any two words in the language. They are not only true compounds, but generally admitted to be such. No one says *tea-cup* or *tea-pot*. And this is because the import of the first element is transparently clear. There are cups and pots of many kinds; and the prefix distinguishes this kind from others. There are cups and pots for *tea*, and cups and pot for *coffee*; so that the words *teapots* and *coffeepots* or *teacups* and *coffeecups*, when we look to the *pot* and *cups*, and ask of what kind they are, are the result. The word that particularizes is the word that takes the accent. But if we change the point of view, and look at our *pots* and *cups* as so many members of a class of objects connected with *tea* or *coffee*, and attend to the fact of their being *pots* or *cups* rather than *mills*, *grinders*, *roasters*, *chests*, *caddies*, and the like, the accentuation changes. If we are consciously and decidedly insisting upon the differences between a *pot* for *coffee* and a *mill* for *coffee*, especially if we contemplate the likelihood of the one being confounded with the other, the stress, emphasis, or accent on the latter syllable becomes very decided; so decided indeed as to give *coffee-pot* or *coffee-mill*. If those combinations are scarce and transitory (and it may be remarked that if they were numerous and permanent they would form a separate class of true compounds), it is partly due to the cases where we have recourse to them being comparatively rare, and partly to the fact of the first element being capable of being omitted or understood, without injury to the sense; for, when it is known that we are speaking of (say) *coffee*, the words *mill* and *pot* are sufficient.

But the distinction may not be so decided as this. A very little may derange the equilibrium; when it is only natural that the results of the juxtaposition of two words become uncertain, and that the rules which regulate them grow extremely complex. The one, however, which carries us the farthest is this: the more general the second element, the likelier it is to give birth to a compound. The more kinds there are of *pots* and *cups*, the more kinds there are of compounds like *teacup* and *coffeecup*; and as these become numerous their compound character becomes decided. On the other hand, so familiar a word as *beef-steak* is, as far as my own experience goes, no true compound. It is rarely sounded *beefsteak*. This is because *steak* is anything but a general word. There are no *steaks* of either mutton or veal, only *chops* and *cutlets*. Hence, there is but little from which certain slices of *beef* need be distinguished. Time, however, will make them true compounds. When steaks from the rump and steaks from the other parts of the ox are more generally and definitely distinguished from one another than they are at present, we shall talk of *rumpsteaks* and *beefsteaks*. Meanwhile, usage will fluctuate.

I make no excuse for the homely character of these illustrations. I am dealing with a common process of language, which common words best illustrate.

One of the results of all this unsteadiness and fluctuation the reader has probably anticipated. The poets use these words much according to the demands of the metre. In some respects this is important. Great poets are great authorities; and, what is more, authorities which are easily quoted, and which tempt to quotation; so that the accent of a word may be defended on a plea which, even if authority were worth much, would not be authoritative. Hence, whenever we find a word unusually accented in poetry, we should ask how the poet would have sounded it in prose. In the present work there are many words which the entry treats as true compounds, but for which some of the poetical examples give the accentuation of two words. I have generally (I hope always) drawn attention to this. In one page for instance, the same writer, Byron, gives *blue-bottle* and *blue-stocking* in the extracts where the entry gives *bluebottle* and *bluestocking*. Does

anyone, however, doubt how the writer pronounced these words in prose? Does any doubt how he sounded *beef-steak* when ordering one for dinner? Yet in one passage, at least, he calls it *beéf-steak*. *Accent as a test of Composition.*

I like a beefsteak, too, as well as any.

Under Court will be found some remarks upon the fact already alluded to, though but slightly. Of two words which, when taken by themselves, each bears an accent, the accent may be changed by bringing a third into combination with them. A case is brought before the *County Court* (two words, unless, as is rarely the case, we say *County-court*), but it is tried before the *County-court-judge*. Here we get a pair of words when taken by themselves, but a compound when preceded by a third. Surely the difficulty of saying where ordinary syntactic juxtaposition ends, and where composition begins, is no light one. The one may be compared to mechanical mixture, the latter to true chemical combination; and it may be added that the test of difference is more uncertain in philology than in chemistry. If I am wrong in taking change of accent rather than change of meaning as a test, I am open to correction. It has been said of lexicographers, that it is their business to understand the import of single words, but that the art of putting two together is beyond their sphere. The saying is, of course, a sneer, but it is one that they may adopt. They deal with the elements of language; grammar alone teaches the combination of them. With a lexicography, too, like that of the work before us, where the arrangement is neither logical nor etymological, but simply that which gives, *alphabetically* and *artificially*, a repertory of elementary details, the plea has double force.

Such is our sketch of the chief characteristic of a compound, as compared with two or more words in ordinary contact; and for the purposes of a dictionary it is sufficient, at any rate in a temporary introduction. For the sake, however, of giving completeness to the subject, and on the principle that a knowledge of the whole helps to a knowledge of the parts, I will go a step further and notice the difference between Composition and Derivation. Composition is the putting together of whole words. Derivation is either the union of a whole word with a part, or some internal modification of the word itself. The stage to which we have brought the words of the class which has just been under notice exhibits a period of uncertainty and fluctuation. This may last for an indefinite period, or it may pass away quickly. It often happens that, after a compound has been formed, one or both of its elements may undergo a change. This is of two kinds. Its meaning may change, or its form may change. Thirdly, either of its elements may, *as a simple word*, drop out of the language altogether. The *ric* in *bishopric* has so changed; and so dropped out; the result being that no question as to *bishopric* being a pair of words, instead of a true compound, can now be raised. The only chance is that of its being taken for a derivative. **Composition and Derivation.**

Of changes of form there is no better instance than the syllable *-ly*, in words like *manly* and *wisely*. It was originally *like*; and, being this, formed the second element in a compound. It now makes the word in which it appears less like a compound than a derivative; to mistake it for two words being impossible. Many words in which this process has gone on to an extraordinary degree are among the most notable curiosities of philology. *Drake*, for instance, is from *ente*=duck and *rik*=male; yet all that remains of *ente* is the single letter *d*. Thus the end of two words is a single syllable. Similar processes may be seen under Both, Brent, and several other entries. Some derivatives, then, may have grown out compounds; how many is a question foreign to the present enquiry, though, in itself, an important one.

Here ends the notice of some of the extremely complicated details of the difficult question concerning the difference between a combination of separate words and a true compound resulting in the union of them. That the former have no place in a dictionary has been stated. Some think that it has been assumed rather than proved. Be this as it may; on the plea of prescription some are recognized. That there is inconsistency in this is clear; but I submit that it is an inconsistency of a reasonable kind; and that, even independent of the precedent established by my predecessors, the natural difficulties of the question make the application of any absolute and thoroughgoing rule a matter of inordinate difficulty.

Hyphen.

The consideration of the *Hyphen* now presents itself. The preceding remarks have probably suggested a rule respecting its use. Use it where the combination gives us two words in contact; ignore it where the accent gives us a true compound, i. e. two words amalgamated into one. This has been done to a great extent, but not altogether.

That the use of the hyphen is irregular is clear; and it is a question whether it may not be dispensed with altogether. Some writers, without doubt, indulge in it with more freedom than discretion. Others take more than ordinary pains to eschew it. That the small details, too often overlooked, of colons and semicolons, of parentheses, of dashes, and the like—details which, without actually changing the literary composition, set off what was written to the best advantage—commanded more than ordinary attention on the part of so eminent a writer as Lord Macaulay, a writer who might so easily have afforded to neglect them, is well known. The accuracy of his punctuation is specially stated to be anything but matter of accident. So is the comparative absence of dashes and parentheses; to which we may add that of the hyphen. He gives few, if any, instances of it; though of words in which it might show itself he is not sparing. Within the space of a few pages, in a volume opened haphazard, I find *faintheartedness*, *highspirited*, and *militiamen*, all undivided. On the other hand, *fir wood* and *cabbage stalks* (taken, also, from pages opened at random) are given as pairs of words. In the hands of many a good writer these five combinations would have given us just so many hyphens to indicate them. It is clear, then, that, as far as authorities go, there is a high one in favour of economizing them.

And they had better be economized than ejected altogether. They are useful in many little points. For instance, it is our practice to use *y* instead of *e* or *i* at the end of words; a practice for which there are more reasons than need here be given. It is also the practice to retain it in the middle of compounds wherein it is the last letter of the first element; in other words, to treat it as final, even when a combination makes it medial. In *derivatives*, however, it is changed into *i*; so that from *dreary* we get *dreariness*. But the hyphen is part of the system which writes (and that correctly) true compounds as single words; a system which discountenances such spellings as *cherry stone*. Yet *cherrystone*, on the other hand, displeases us, on account of the medial position of the *y*; the *y* which is so preeminently the sign of finality. Meanwhile, as *cherrystone* is a hazardous innovation, *cherry-stone* with the hyphen gives us a convenient compromise; and of compromises of this kind, which betoken a whole system of orthographic expedients, the English spelling-book is full. Other instances in favour of economy, rather than abolition, could be brought, if needed.

We have now seen why some words are entered out of the strict alphabetic order; and why others are somewhat inconsistently omitted. In connection with this the hyphen has also been noticed. So has the accent.

But the accent has now to be noticed again; and that on its own account.

Accentuation.

One reason why certain words have no accent over them has been given. The members of the other class are less important. There are a few thoroughly obsolete words, words so obsolete that no man living has ever heard them uttered as part of the current language of England; words which are found in prose, so that the metre will not help us; thirdly, words which are not sufficiently understood in their etymology to give us the exact pronunciation as an inference from their structure. These are left unaccentuated. With these exceptions, every word of more than one syllable has its accent marked.

A few have more accents than one; but only a few.

Words in which two accents are *sounded* are numerous. As a general rule, it is sufficient to mark only one. In a word, however, like *ipecacuanha*, a word which we cannot well deny to be English, a single accent on the penultima would help us but little towards the pronunciation of the preceding four syllables. The real sound is *ipecácuánha*. It might, however, be *ipecacuánha*, for all that a single accent could tell us to the contrary.

Omission of 'to' before Verbs.

The first Verb in the body of this dictionary is *Abet*. In the previous editions it is preceded by *to*, so as to stand *To Abet*. The *to* is now omitted. The alteration, though small, is not below notice. In the first place, the prefix is superfluous.

This, however, is not the chief reason against its use. It has hitherto been recognized because it is supposed to be the sign of the Infinitive mood; the Infinitive mood being supposed to be the most convenient form for the exhibition of the Verb. Each assumption, however, is more than doubtful. In respect to its origin, *to* is *not* the sign of the Infinitive mood. It is *not* the sign of the Anglo-Saxon equivalent to the Latin *amare*. The Anglo-Saxon equivalent to the Latin *amare* was *lufian*. The Anglo-Saxon form which *to* preceded was *lufianne*; and the Latin equivalent *to* *lufianne* was not *amare*, but *ad amandum*. In other words, *to* belonged to the Gerund rather than to the Infinitive. In respect to its syntax, it is not, even at the present time, universally used in Infinitive constructions. After *can*, *will*, *shall*, *dare*, and several other words, followed by another Verb, we look in vain for *to*. We always say *can*, *shall*, and *will* do; and we say *dare* do at least as often as *dare to* do. To explain this by stating that in some instances the sign of the Infinitive is omitted, is a philological oversight. The fact is that the true Infinitive construction is limited to the small class just alluded to; the ordinary construction with *to* being not Infinitive; but Gerundial.

Omission of
'to' before
Verbs.

The Infinitive mood, then, is *not* the most characteristic form of the Verb; or rather, the form in *to* is not a true Infinitive. On the contrary, it closely approaches the Substantive. Theoretically, the best form for entering a Verb in a dictionary is the Imperative mood, wherein, in most languages, the inflectional modifications are at their minimum. In English, however, the question is unimportant. So long as we give our Verbs in the simplest form which the language allows, we may call them Imperatives, Infinitives, or First Persons Present, indifferently.

The names of the letters (A, B, C, &c.), which are given in the previous editions at the beginning of each, are given as they are spelt as words, i.e. as *be*, *ce*, *dee*, &c. It is only as words that they belong to a dictionary.

Names of
Letters.

Abbreviations, too, as A.D. (*Anno Domini*), &c. are omitted. They are *not* words; only parts of words. They are often not English.

Abbrevia-
tions.

II. With this end the remarks which apply to the word itself on its entry; and another division of the subject follows. The first notice concerning every word, after the word itself, tells us what it is as a Part of Speech; the Parts of Speech in Johnson being the ordinary eight of the Latin grammarians, with the addition of the Article, which is wanting in Latin. Nor are these little notices objectionable. That the definition should tell us whether a word be a Noun or a Verb may be true; but it is also true that the question belongs to the domain of the grammarian rather than to that of the lexicographer. Nevertheless the notice has rarely been thought superfluous. Capable of being given in a very compendious form, it is useful in all languages; in the English most especially so. In Latin, in Greek, and many other tongues where the inflection is full, and where every Noun has incorporated with the root a sign of case or number, and where the Verbs have similar ones of mood, tense, and person, it is not much wanted. But in English, where such signs are few, and where not only Nouns and Verbs, to say nothing of Particles, are often without any distinctive affix at all, being in many cases, letter for letter and sound for sound, the same words, the distinction looks like a necessity rather than a superfluity.

II. PARTS
OF
SPEECH.

In this, accuracy is the one thing needful. To enter an Adverb as a Conjunction, or a Conjunction as an Adverb, is to mislead a whole host of grammarians; and it must be a very bad grammar indeed, which in some place or other is not raised into the dignity of a text-book. This is a serious matter. Yet strict accuracy, determined by a rule which, at one and the same time, shall be absolute and thoroughgoing, as well as precise and simple, is an impossibility. Add to this, the fact of many words being what we may call words of double, treble, and even quadruple entry. Not to mention the practice, indicated by precedent, justified by convenience, and advantageous even when criticized from a scientific point of view, of entering the same Verb twice over when it is both Active, or Transitive, and Neuter, or Intransitive, there are such common words as *black*, *white*, &c., which are Adjectives, Substantives, or Verbs, as the case may be. When *black* is a Substantive we can make it plural, and talk of the *blacks* of *Africa*. But with Adverbs, Prepositions, and Conjunctions there are no differences of inflection, a fact which leads

Parts of Speech.

us to the consideration of the present condition of the English language as compared with that of the Latin and Greek, to the latter of which the grammatical names for the Parts of Speech were first applied. The Greek and Latin expressed by cases, tenses, and moods, much of what the English expresses by Prepositions and Auxiliary Verbs; hence what we denote by separate words was denoted in the classical languages by affixes or prefixes, i.e. by modifications of the main word itself. I submit that this alone gives a presumption in favour of the nomenclature which suited one language being ill adapted for the other.

In English, where there are but few signs of case, tense, and person—the great external characteristics of Nouns and Verbs—the chief, though not the only, principle by which we can predicate of a given word that it belongs to such or such a division of the so called Parts of Speech is the one which we obtain by an examination of the structure of Propositions.

The Subjects and the Predicates of propositions are called their Terms. In 'man is mortal,' the first word is the subject, the last the predicate.

Words that, by themselves, can form a term, *and nothing more*, are *Nouns*.

The only words that, *by themselves*, can form either subjects or predicates are either Substantives or Pronouns. We can say:

'Men are animals,' 'This is he.'

Words that, *by themselves*, can form predicates, *but not subjects*, are either Adjectives or Participles. We can say:

'Bread is good,' but not 'Good is bread.'

If we do, we merely transpose the terms.

The word *is* is a copula; concerning which all that need be stated is found under *Am*.

Words that, *by themselves*, can form both a copula and a predicate, or which deliver a predicate involving a copula, are Verbs.

'Fire burns' equals 'Fire is burning.'

All these words are called by the logicians *Categorematic*, by which is meant that they can, *by themselves*, express a term *at least*.

The Verb can do something more than this. It can deliver a term and a copula, and might well be called *Hypercategorematic*.

Adverbs and Prepositions, of which no more need be said at present, can form only *parts of terms*: as,

'Birds sing *sweetly*.' 'Eagles build *on* rocks.'

Conjunctions appear only when there are *two* or more terms, which terms they are said to unite, disjoin, or in some way stand between: as,

'Most men are black *or* white.' 'All men are two-handed *and* rational.'

But, generally, these terms are in different propositions; sometimes explicitly: as,

'The sun shines *and* the moon shines;'

though, oftener, they are thrown compendiously into one: as,

'The sun *and* moon shine,' and 'The sun shines *and* warms;'

which is

'The sun shines *and* the moon shines,' and 'The sun shines *and* the sun warms.'

The existence (always) of a second term, and (generally) of a second proposition (either explicit or implicit), is the logical condition of the Conjunction as a Part of Speech. Adverbs, Prepositions, and Conjunctions are called by the logicians *Syncategorematic*.

The words *yes* and *no* can form propositions by themselves; *yes* meaning *it is so*, and *no* meaning *it is not so*. Still they always *imply* a previous one: herein agreeing with Conjunctions, from which they differ in not standing between two terms. Though not Conjunctions in the strict sense of the term, they are conjunctive rather than aught else. It is sufficient, however, to simply call them Affirmative and Negative Particles.

Interjections form no part of a proposition at all. They assert nothing, they deny nothing. They suggest certain states of feeling; but they differ from the actual expression of it, as the exclamations *oh!* and *ah!* differ from such sentences as *it hurts me*, or *it grieves me*. They are spontaneous ejaculations akin to the sounds uttered by the lower animals.

The last of these so called Parts of Speech is the Article; and, in the present Preface, the general question as to the nature of the Articular construction is invested with unusual importance. It will be taken as a type to which several other words will be referred; and the word *Sub-articular*, as applied to the construction of certain combinations, will bear a special signification.

The Article in English, as in many other languages, and perhaps in all, is that Part of Speech which was the latest to be developed. The Latin has no Article at all. The derivatives of the Latin, the Italian, Spanish, Portuguese, Provençal, French, Romance, and Rumanyo, or Valachian, have two. All history shows that it is a form of late growth. More than this; its origin is so late as to be beyond doubt or controversy. That the origin of the Article is in the Pronoun is a fact of which the beginning has, in many languages, taken place within the range of our philological experience.

Of all the Parts of Speech, the Article is the least categorematic. In one sense this is a matter in which there are no degrees; nevertheless, the Article is *syncategorematic* after a fashion of its own. It is scarcely a word at all. It is a subordinate part, not so much of a term as of some particular word in it. It is *almost an inflection*: in some languages it is wholly one. The Rumanyo, or Valachian, for *the man* is *omul*: one word. Analysis and history tell us that this was once *homo ille*: two words. In Danish, too, *sol*=sun, *sol-en*=the sun; *bord*=table, *bordet*=the table. The Genitive case of *bord* is *bords*; the Genitive case of *bordet* is *bordets*=the table's. Yet in the Old Norse, *hit* was simply the neuter of *hin*=*hic* or *ille* in Latin; the Articular *-en* and *-et* being merely modified forms of it.

Now this gives us the chief characteristic of this Part of Speech. The *-ul* in *omul*, and the *-et* in *bordet*, are not only words with no independent existence of their own; words which only exist as subordinate and incorporated parts of another word; but they are words of which the fuller and independent forms exist concurrently with these their offsets, abbreviations, mutilations, degradations, degenerations, transformations, metamorphoses, developments, or whatever else we like to call them.

Applying this to the English, we find that *an* (or *a*) is *one*; and that *the* is an offset from the same root as *this* or *that*. How does *the man* and *a man*, so far as the incorporation of the Article with the Substantive and its subordination to it are concerned, differ from *omul* and *bordet*? But slightly. There is the same unmeaningness, the same unsubstantial character in both when isolated. There is the same fusion with the Noun. There is the same relation to a Pronoun with a fuller form, and a more self-supporting existence. All this connects the one kind or Article with another, the only difference lying in the fact of the English word being a *Prefix*, whereas the Danish and Rumanyo forms are *Affixes*. But this is nothing more than the difference between the Rumanyo *-ul*, and the Italian *il*, which is simply the same word. The difference, then, between *pre*-position and *post*-position is, evidently, not of sufficient importance to destroy the articular character. To a Dane the *-en* or *-et* that follows certain Substantives is a true Article, and to a Frenchman or an Englishman, the *le* and *the* which precede certain Substantives are no more. It may be argued, however, that though *-en* (or *-et*) in Danish, and *-ul* in Rumanyo may be good Articles, it does not follow that *le* in French, and *the* in English are good inflections. Their place as *Prepositions*, it may be argued, forbids this view of their character. I know nothing, however, that thus makes the bare fact of *postposition* in the way of place so essential an element in our definition of an *Inflection*. The Reduplication, as well as the Augment, in Greek is certainly a *Prefix*; and as certainly are both the Augment and the Reduplication inflections. It is true, indeed, that between the Article and the Substantive we in English may insert an Adjective; saying *a* (or *the*) *good man*. But this only shows that, as the Adjective may be subordinated to the Substantive, the Article may be subordinated to the Adjective. Let a man be free to form his own definitions, and deal with our language simply as he finds it, without reference to any

previous doctrine, and he may make out a good case for treating our Article as an inflection. At any rate it gives an approach to one.

I have anticipated the bearing of what is now forthcoming by the prominence given to the Article, and by suggesting the word *Subarticular*. The construction of the Article is typical of many other combinations in the way of English Syntax. Neither the Greek word *Ἀρθρον*, nor the Latin *Articulus*, both of which mean *Joint*, so far as the etymology is concerned forbid an extension of the term. True, it applies in ordinary grammar to only a few modified Pronouns. Of these I have, in my earlier works, increased the number, by the addition of *No* (= *not one*) and *Every*; neither of which can, like ordinary Pronouns, form a term; neither of which is categorematic. And I now add (*when in the singular number, meaning a certain person or thing*) the word *some*. But other words of similar syncategorematic character are numerous. Compare *my, thy, her, our, your* with *mine, thine, hers, ours, and yours*, and they comport themselves in Syntax like *an* and *the*, as compared with *one* and *this*. Then take the whole mass of Adverbs, Prepositions, and Conjunctions, all or, at least, many of which have once been Nouns, and the Articular character of their construction becomes manifest. But, as it is too late to call all these words Articles, I limit myself to calling the constructions in which they occur *Subarticular*, the term which I have so lately noticed as one of which I was about to extend the application. I would, indeed, apply it to such constructions as that of *have*, with the Preterite Participle; a point upon which more will be said in the sequel. All, then, that now remains to be said is that this Subarticular character pervades our language; and is a great impediment to the definite classification of English words as Parts of Speech. Pronouns are essentially categorematic; at least, according to the logical test. Yet *my, thy, &c.*, which are eminently *Subarticular*, can scarcely be eliminated from the class of Pronouns.

These are broad facts, and definite, and for many languages they would be nearly sufficient. They are sufficient also for ordinary grammars, or those which merely convey a certain number of neatly framed artificial rules, which, combined with practice and eked out by explanations from either the teacher or the commentator, enable the learner to make himself master of a certain amount of scholastic information. But for many languages, and most especially our own, they are inadequate. They will not give us the true Parts of Speech. They give us, to use the language of those who have most gone into the philosophy of classification, no coordination. As elements in propositions, the Pronoun and the Substantive, the Adjective and the Participle, comport themselves alike. Yet all grammarians separate the Pronoun from the Substantive, and many the Participle from the Adjective; the Participle being connected with, or attracted towards, the Verb. Yet the Participle has its cases and numbers in Latin and Greek, and had them in the Anglo-Saxon stage of the English. Moreover, it is *declined*; whereas the Verb, with its tenses and persons and moods, is *conjugated*. If we ask how this can be, we shall find that there is another principle at hand; one which, by supplying a fresh basis of arrangement, gives us a cross classification.

Words can take the same places in propositions or sentences on the strength of their agreement in certain points, and yet differ notably in others. Thus, Substantives and Pronouns are what they are because they are *names*. They are names, however, of very different import.

A Substantive is inconvertible. It is given to certain objects on the strength of certain permanent and inherent properties. I take these as I find them, and draw attention to their permanence. The particular properties or qualities which are essential to our conception of a *stone* may be a matter of doubt; but as long as a certain number of persons agree upon taking any, either singly or combined with others, a *stone* always means an object in which those properties are found. *Stone* can never mean *man* or *orange* or *blood*, or the like. Its application is based upon something inherent, substantial, substantive.

Not so, however, the Pronoun. *I* is as true a name as *stone*; *this* as good a name as *orange*. But *I* only means the speaker *whoever he may be*, and *this* only means something within a certain distance from him. Change the place, and *this* becomes *that*. Change the speaker, and *I* may denote the person who but just now was addressed as *you*. It may denote *Thomas*, having

but just before denoted *John* or *William*. Still, they are names *for the time being*; at any rate, they comport themselves as Parts of Speech, exactly as Substantives. They are names, but they are variable or convertible names; and they are this because, instead of denoting permanent qualities, properties, or attributes, they denote relations, these relations being mutable. Now, a classification of words according to the *manner in which they denote objects* separates the Pronoun from the Substantive, whilst a classification according to *the place which they take in propositions* draws them towards one another.

*Parts of
Speech.*

Again, the Adjective takes the same place in a proposition as the Participle, the Participle the same place as the Adjective, and, so doing, belong as Parts of Speech to the same class. Yet they do this in different ways. The Adjective tells us what an object *is*, the Participle what it *does*; so that if our classification were founded solely upon the nature of their import, and if the words that suggest *states* were contrasted with the words that suggest *actions*, the Adjective and Participle would stand somewhat far apart. As it is, the nature of the import connects the Participle with the Verb; of which, in many languages where the former is not recognized as a separate Part of Speech, it is treated as a form.

The next point to be noted is that, to use the current expressions (though, as instruments of criticism and speculation in the higher branches of philology, these are often inconvenient and exceptionable), it is only in the Nominative case that Pronouns, Substantives, Adjectives, and Participles are *categorematic*, i. e. capable of forming terms *by themselves*. Though we can say 'man is mortal,' we cannot say 'man's is mortal.' We must add *nature, body*, or some word of the same kind, before we get sense. This applies equally to single words like *man's*, or to combinations like *of man*. The *s*, the sign of the case, in the former instance is an inseparable element; the Preposition *of*, in the latter, a separable word. Neither, however, can form a term by itself; nor can the combination of which they form a part.

That sentences like 'this is John's' form no exceptions need only be suggested. There is always a second word implied or understood; i. e. the word which belonged to the subject, whether explicitly named, as 'this hat is John's *hat*,' or understood.

More than this. Strictly speaking, it is doubtful whether even Adjectives and Pronouns are truly *categorematic*; inasmuch as it may be argued that, when we say 'wine is good,' we always understand a Substantive; the full expression being 'wine is good *wine*,' or 'wine is a good *thing*.' And the same reasoning may be extended to the Pronoun. When we say 'this' or 'that,' we always mean *this something*; *that something*; *this Nor M*; as the case may be. Individually I think that the Pronoun is truly *categorematic*, though this is no place for an exposition of my reasons for doing so. Be, however, the case in this respect as it may, it is a matter of fact that, for most purposes of ordinary grammar, the Pronoun and Adjective are not only commonly treated as *categorematic*, but may be so treated without much inconvenience. It may also be added that, under any view whatever, the difference between the Pronoun and Adjective in respect to their power of forming terms is real. The former can be either subject or predicate, the latter a predicate only. The closer connection, arising from this, between the Pronoun and the Substantive, than that between the Substantive and Adjective, is also real.

Another distinction may be drawn between the Adjective in combinations like 'the good man' and the Adjective in combinations like 'the man is good.' In our own language this distinction is of no very great importance. In many others, however, it is attended with a difference of form; the Adjective in combination with a Substantive, or the Adjective in concord, having one, the predicative Adjective another. I do not, however, say that the difference gives us two sorts of Adjectives of sufficient importance to demand any considerable alteration of our current terms.

Such is the sketch of what we may call the logical principle of our classification, of which it may safely be said that, even if there were no other principle of equal importance which could be set against it, it contains within its own range several conflicting elements which, by impairing its simplicity, impair its value. But there is another principle besides, and one which has a very wide application. This is the etymological or historical one. Words change their classes, passing from one group to another. What was once a Substantive or a Pronoun may become something else—

Parts of
Speech.

still remaining, as far as its origin is concerned, the same word. Its meaning and construction may be modified, the form remaining.

Now, if the form be well marked, and the change of meaning or construction slight, it is highly probable that the question as to what a word is as a Part of Speech tested by its place in a proposition may never be put; or the question may be put, and the answer be one that condemns the test; in other words, it may be the judgement of the enquirer that any principle which would throw words so directly allied to each other as the word in question and its old congeners into different classes, is, simply from the fact of its doing so, exceptionable and imperfect. We may illustrate this by a few out of many examples.

We have seen what a Pronoun is. The numeral *one* is a Pronoun; so are *this* and *that*. Probably all the modifications of the root *th-* were the same. Let us assume that they were so. Nevertheless, *the* is no Pronoun, but an Article. Meanwhile, *a*, from *an*, which is but another form of *one*, is the same. Yet the Pronoun is catagorematic; whereas no words are less so than the Articles. Meanwhile the Articles (though, as the logical elements of a proposition, they are something else), as *words*, are Pronouns.

The predicative Adjective readily becomes Adverbial. In such an expression as 'good man,' the word *good* is an Adjective in the strictest sense of the term; and if we had in English signs of case, gender, and number, these signs would be used, and they would agree with those that attended the word *man*. The Latin is *bonus homo*; *bona femina* being *good woman*. With the 'man is good' the case is different; the agreement between the two words being less necessary. Let *good* mean a *good thing*, a *good object*, or the like, and it might be in a different gender from *man*. In Latin *lupus* = *wolf*, and is Masculine; whilst *triste* = *sad, bad, or hurtful*, and is Neuter. Yet '*triste lupus stabulis*,' meaning *the wolf is a bad thing for the homesteads*, is from a well-known line of a good writer. In a proposition like 'the wine is good,' the necessity for *good* agreeing with *wine* is less than it is in such a proposition as 'this is good wine;' yet in each case *wine* is the object to which *good* refers. In 'this wine looks good' the connection is looser still. For *good* write *well*, and the sense is but slightly altered. Yet *well* is a genuine Adverb; while *good* itself, thus brought into close contact with a Verb, is very like one. Now, in most languages, Adjectives in the Neuter gender can be treated as Adverbs; and I submit that this predicative construction, whereby they are brought in contact with Verbs, helps us to the reason why.

As the Verb passes into the Adjective through the Participle, it passes into the Substantive through the Infinitive mood and the Gerunds.

Construc-
tion of
'have' with
the Passive
Participle.

I now come to the consideration of the Part of Speech to which we can refer the word *have* in such an expression as 'I *have* written.' It is generally called an Auxiliary Verb. Upon the fact of the word Auxiliary itself being one which the exigencies of languages in the condition of the English have created, and upon its absence in the nomenclature of the classical languages, I need not enlarge. At present, I only ask what Part of Speech is *have*? It is certainly an Auxiliary word; but how far is it a Verb? That it has the same sound and spelling as the Verb which means *possess* is true. But where is its possessive power here? It had one once, and it has one now, but not in the combination under notice. Translate *have* as *possess*, and what is the result in the way of meaning? At present none. It is necessary, however, to explain the process by which it arrived at its present power, even at the risk of telling a tale with which most grammarians are sufficiently familiar.

By such an expression as 'I *have* written a letter' two notions are conveyed; one of Past time and one of Present. In 'I *wrote* a letter,' the notion is simply Past. In 'I *have* written one,' there is always a Present element. The phrase may suggest many different things connected with the present time; e.g. that *I expect an answer*, that *I do not mean to write again*, that *I expect some result from writing it*, or the like. Still there is always something Present. Again, when the schoolboy says 'I have learned my lesson,' the hearer infers that he is ready to say it, that he would like to be set free, that he does not intend to work at it again, or something equally connected with the time at which the speech is made. To 'I learned my lesson' he attaches no such import. As there is no

exception to this presence of a Present element in all the combinations of *have* with a Past Participle, it is needless to multiply instances.

The two words, then, give these two elements. The first is a Verb in the Present tense, the second a Past Participle. But why should the Verb be *have*? How does the word expressive of possession help us in talking of Past time linked with Present? We see our way to this by transposing the words. In 'I have a letter written,' the Past Participle *written* tells us the nature of the act; whilst *have*, in the Present tense, tells us that the writer is, at the time of speaking, in possession of the thing written. A little latitude enables him to treat any of the effects of the writing as a part of the act by which the letter was written.

And here we must remember that, though *have* is conveniently dealt with as equivalent to *possess* or *own*, we connect it with a great many terms to which these approximate synonyms are not so properly applied. A son can scarcely be said to *possess* a father; yet he *has* one. Nevertheless, what with the latitude in the use of the word itself, and what with the latitude which allows us to treat the results that flow from a past action as a part of the action itself, a great number of apparently strange cases are covered; and so long as the object connected with the action is an object which can, by any interpretation, be said to be one which the doer of the action can, in any way, *possess*, *own*, or *have*, the difficulties in the history of the phrase in question are not very great. A boy who has learned his lesson is the *owner* or *proprietor* of that lesson. A man who has drunk a glass of wine *has that wine as a thing drunk*. A man who has ridden a horse, even though the horse, as a chattel, belong to some one else, *has done the riding part*. The *being ridden*, indeed, belongs to the horse; but, as such, it connects the horse with the rider.

The question of time is somewhat simpler. What a man has when he is speaking is Present. What was done before he spoke is Past. The two notions together give us that modification which the grammarians tell us is expressed by the Perfect tense, an act in Past time continued by its results to the Present.

That the use of the word *have*, with this import, began thus, is a matter of philological history for which, though much evidence is naturally demanded, much can be produced. Rudiments of it are found in the Greek, in such phrases as ἔχω γράψας = *having written, I have*. But this agrees with the English form only in the use of the word meaning *have* with a Past Participle. The construction in English is, *I have a letter written*, in which *written* is in the Accusative case governed by *have*.

But it is in the Neuter gender. This is because it does not agree with the Substantive which precedes it, but with the word *thing* understood; the fresh import of the combination being *I have a letter as a thing written*. By the Anglo-Saxon, in which the Participles had all the accidents of case, number, and gender, this is placed beyond doubt or question.

Now of this construction in all its details we find instances in Latin, in even the Latin of such writers as Cicero and Sallust. When the former says 'satis hoc de Cæsare dictum habeo,' he says, if we translate his language according to the ordinary grammar of his time, *I hold, own, or keep, this as a thing said sufficiently concerning Cæsar*, or, after the English idiom, *I have said enough concerning him*. Catiline's address to his soldiers, beginning 'compertum habeo, milites, verba viris virtutem non addere,' in full, and with the concrete meaning of *compertum* and *habeo*, is '*I am in possession of the discovery, or I have as a thing discovered, that words add nothing to the valour of men,*' or, English fashion, *I have discovered*. The time is Perfect, i.e. both Past and Present; in other words the Past time of the discovery is prolonged, by its application to the time of speaking, into the Present; the one being delivered by the Participle, the other by the Verb *habeo*. That *have* is truly the Verb signifying possession is sufficiently shown by the Spanish and the Old German; the former of which languages gives, in its place, *tengo* = *tenco* = *hold*, the latter *eigan* = *own*. In the Latin these combinations are exceptional. In each of the above-cited instances the Participle could scarcely be other than Neuter; inasmuch as it is a sentence, or series of sentences, rather than any particular word to which it refers. The examples which could be added, by no means numerous, are all of the same kind, so far at least as they are taken from the classical writers. It is just in proportion as the language grows modern, or, in other words, becomes Italian, Spanish,

or French, that the contrast between the Neuter Participles and the Masculine or Feminine Nouns presents itself; a contrast which does so much to disguise the true character of the combination.

Just, too, as the Latin becomes Italian, Spanish, or French, does the Participle *follow* the Verb, and *dictum habeo* becomes *habeo dictum*. The result of this transposition deserves notice. *I have a letter written* is the ordinary construction of a Substantive governed by a Verb; and, as long as it is adhered to, the true character of the Verb proclaims itself. But when, by transposing the order of the words governed, we place the *Participle* in immediate contact with the Verb, the analogies of *be* and *was* suggest themselves, and the conspicuousness of its true verbal character is impaired; for the word to which it belongs then looks more like an Auxiliary than an Active or Transitive one. More than this; as *written* immediately precedes *letter*, it seems, instead of agreeing with it, to govern it. Such is the sketch of the process by which a combination equivalent to

'I own a letter as a written thing' becomes 'I have written a letter,'

in the common sense of the term.

Our language, however, goes farther than this, and *have* is used not only when the very slight amount of possession implied in the foregoing examples has disappeared, but long after any notion of possession is possible. It is used before such words as *given away*, *missed*, and *lost*, and many others signifying anything but possession; signifying, indeed, positive *non-possession*. It is followed, moreover, by the Participles of Neuter or Intransitive Verbs, as *I have moved*, where, as there is no object to be governed, there is nothing for the Participle to agree with.

Finally, we have the combination with *been*; a combination of so extreme a kind, that there are but few languages in which it is found. The French say *j'ai été*; we say what, allowing for the difference of language, is the same. But in the Italian, and in the German, the combination is the equivalent, not to *I have*, but to *am*, *been*; i.e. *sono stato* in Italian, *bin gewesen* in German.

A good name for the condition into which *have* is reduced by the processes just indicated is much needed. *Auxiliar*, or *auxiliary*, scarcely gives us what we want. *Can*, *may*, *shall*, and *will* pass for auxiliaries; but *can*, *may*, *shall*, and *will* are by no means in so peculiar a condition as the word under notice. *Abstract* can scarcely be recommended. It is, certainly, the opposite to *Concrete*; and in favour of calling the ordinary sense of *have*, with its power of expressing possession, and its accompanying Substantive as the name of something possessed, *Concrete*, a fair case may be made out. However, both *Abstract* and *Concrete* are words which have done such hard duty already that it is best to leave them at rest. That the latest sense of *have* is *indefinite* is manifest; and perhaps we may say that in every stage of its history the word *have* has lost precision and definitude. In respect to its construction it is *articular*; in other words it combines with the Participle much as the true Article combines with its Substantive. Still, *articular* or *sub-articular* are, as aforesaid, terms which I only suggest; and I would, at present, apply them only in speaking of the general character of the construction.

Omission of
'to' before
Verbs.

Again—combinations like *to love* are said to give us Verbs in the Infinitive mood. But Infinitive moods are as much Nouns as Verbs. In—

'*To err* is human, *to forgive* divine,'

the words *to err*, *to forgive*, are the same in sense as *error* and *forgiveness*. Now to find *amare*, in Latin, as equivalent to *amor* (or, if not the exact word, some similar Infinitive), is not difficult. In Greek it is easy to find $\phi\theta\acute{o}\nu\epsilon\upsilon = \phi\theta\acute{o}\nu\omicron\varsigma$; though, when so found, it is preceded by the Article. So preceded it may be declined, i.e. through the Article. All this, so long as we deal with Infinitive moods, gives us nothing new. But *to love* is not the analogue of the Latin *amare*: it is rather the equivalent of *ad amandum*. It comes from *to lust*. Now, whether we call this a Gerund (and we should act well in doing so), or whether we call it the Infinitive mood in an oblique case, we get the fact of a Verbal, or Verb preceded by a Preposition, acting the part of a Substantive, and that as a single word and as a Nominative case. I submit that this, again, is a fact to which the ordinary views of grammar are scarcely adequate. In truth, however, these are only a few instances out of many; and, even if they belonged to a smaller class than the one

to which they contribute, they would have an importance far beyond that with which they are invested as mere curiosities of philology. They belong to a system, and indicate a definite stage in the development of our language, one of the main characteristics of which is the increase of these subarticular constructions. It is one for a truly scientific exhibition of which nearly the whole of our grammatical nomenclature wants recasting. How far a systematic attempt in this direction lies beyond the domain of the lexicographer (and that lexicographer an editor rather than an original) may easily be imagined. Some presumptions, however, in favour of an innovation of some kind, he may fairly be allowed to exhibit.

*Parts of

*Omission of
'to' before
Verbs.*

In the previous editions Adjectives and Substantives are marked *n. a.* and *n. s.*, i. e. *Noun* Adjective and *Noun* Substantive, respectively. In the present the *n* is omitted. The less the ordinary grammarian talks about Nouns, the better; and, except in the higher regions of his subject, he has but little occasion to do so. That there are certain generic characters by which the Pronoun, the Substantive, and the Adjective, taken collectively, may be distinguished from the Verb on one side and the uninflected Particles on the other, is true; and it is true that generic names for enquiries in general grammar are the best. The lexicographer, however, may enter his words as *Adjectives* or as *Substantives* simply. A word which either requires continual qualifications, or one which if used without repeated cautions is likely to engender error, had best be used as little as possible. Now *Noun* is a word of this kind. All the world over, a Noun is a *name*. All the world over, Adjectives are *Nouns*. But what if the Adjective be *not* a name?

*Adjectives
or Nouns
Adjective?*

That the word *Name* can be so defined as to include Adjectives is likely enough; indeed it has been so defined. 'A name is a word taken at pleasure to serve for a mark which may raise in our mind a thought like to some thought we had before, and which, being pronounced to others, may be to them a sign of what thought the speaker had, or had not, before in his mind.' This is the definition of so influential a writer as Hobbes. It is more than this. It is the definition of Hobbes reproduced with approval by another writer so influential as Mr. John Stuart Mill, who writes:—'This simple definition of a name, as a word (or set of words) serving the double purpose of a mark to recall to ourselves the likeness of a former thought, and a sign to make it known to others, appears unexceptionable. Names, indeed, do much more than this; but whatever else they do grows out of, and is the result of this: as will appear in its proper place.' I think that in this, as in some other points, Mr. Mill's view is wrong as a view in the *matter of language*. Whether the philosophical author of it be wrong as a thinker, is quite another matter. He writes as a logician; and, even in the analysis of propositions, what may be wrong in philology may be right in logic. There are several instances illustrative of this.

1. A logician's proposition is not a grammarian's. The logician recognizes no propositions but such as convey statements or assertions, positive or negative as the case may be. Most of them expressly, all by implication, exclude Commands and Questions; and this naturally, inasmuch as logic deals with inference from some express statement, which a Command or Question is not. But no grammarian can ignore them altogether, nor yet even as propositions. 'What is this?' and 'Walk' contain Subjects, Copulas, and Predicates.

	Subject.	Copula.	Predicate.
The first is	This	is	what (i. e. something I want to know about).
	Copula.	Subject.	Predicate.
The second is	Be	thou	walking.

The logical elements in both are the same, the order and import only being different.

2. Again, a logician's copula is not a grammarian's. Many languages have no copula, and, instead of saying '*fire is hot*,' say (of course *mutatis mutandis*) '*fire hot*.' Upon the probability of the affirmative copula, as a fact in the history of language, being of later origin than the negative, I say nothing, though philological induction favours the view.

3. Thirdly, a logician's view of what may be called the incidence of the negative element is not the grammarian's. Most logicians say that *not* belongs to the copula, and divide 'Man is not perfect' into 'Man [is not] perfect;' whereas others make the negative a part of the Predicate, and say, 'Man is [not perfect].' Which is right and which wrong matters but little. The

difference between the logician and the grammarian is this. The logician, after having made his choice between the two alternatives, makes it thoroughgoing, i.e. an invariable rule. The grammarian, on the other hand, makes no general rule at all, but tests each instance by its own merits. The grammarian's proposition is evidently less simple than the logician's. Yet the logician's simplicity is legitimate. He wants no propositions as such; but simply propositions for certain purposes in the way of argument, discourse, or ratiocination.

Such are the remarks preliminary to the objection to a doctrine that, if it could be settled by mere authority, would be indisputable. Of the extracts before us, the first, conveying the original definition of Hobbes, good as it may be for a logician, especially for one who is prepared to illustrate it by symbols, is too general for any enquiries connected with language. The name according to the definition of Hobbes is merely a word with a certain influence over the association of ideas. For ordinary language, however, a *name* must imply some object that bears it, something *named*. This is a commonplace remark; but I believe that any reader who analyzes the movements of his own mind will admit this to be the case, provided that he looks only to the way in which he thinks naturally and spontaneously. That he may reduce Hobbes's definition to practice is likely enough. He may reduce it to a symbol, and work with symbolic generality. But he never spontaneously thinks it; and in a matter of language I submit that the ordinary practice of language is conclusive.

Now, according to this test, can we make an Adjective a *name*? Let us see how those have written who professed to do so. An Adjective, say *white*, can stand as the predicate of a proposition. Granted. But what is the evidence that it does so *as a name*?

Again, *white* is a *white thing* or *white object*. Perhaps it is. But granting this, what does it tell us? Simply that some secondary term can be omitted without impairing the sense--in other words, that it can be, as the grammarians say, understood. The necessity, however, of some second word, itself a name, is admitted by the very explanation itself.

I must again quote the writer from whom I so unwillingly differ, who writes that 'an Adjective is capable of standing by itself as the predicate of a proposition; as when we say, Snow is white; and occasionally even as the subject, for we may say, White is an agreeable colour. The Adjective is often said to be so used by a grammatical ellipsis: Snow is white, instead of Snow is a white object; White is an agreeable colour, instead of, A white colour, or, The colour white, is agreeable. The Greeks and Romans were allowed, by the rules of their language, to employ this ellipsis universally in the subject as well as in the predicate of a proposition. In English this cannot, generally speaking, be done. We may say, The earth is round; but we cannot say, Round is easily moved; we must say, A round object. This distinction, however, is rather grammatical than logical. Since there is no difference of meaning between *round* and a *round object*, it is only custom which prescribes that on any given occasion one shall be used, and not the other. We shall therefore, without scruple, speak of Adjectives as names, whether in their own right, or as representative of the more circuitous forms of expression above exemplified.'

So far as the statement that the 'distinction is rather grammatical than logical' goes, it grants all I urge; for I write not only as a grammarian, but as one who admits that names and propositions in Grammar and Logic are, in many important respects, different. I imagine that in this Mr. Mill will agree with me. The doctrine, however, that 'between *round* and a *round object* there is no difference of meaning,' is one upon which more must be said.

Of course, if we say that *round* always either means a *round object* (and this it *does* mean when, by standing as a predicate, it forms by itself a term), or is subordinated to the name of some object (which it always is when it forms only the part of a term), the statement is true enough. All, however, that it conveys is that, in ordinary sentences, *round* never stands, absolutely and wholly, by itself. This is the fact, and it is one which covers a great deal of ground. The little plot, however, of the grammarian it leaves untouched. What are *white* and *round* when we isolate them? What are the relations of an Adjective to a name?

In the examples just given, each adjective was the *part* of a name; the remaining part, or the complement to the whole, being supplied by the context. Respecting the general character of the

civil

name thus supplied there need rarely be any doubt, for a sentence must be very badly constructed which conceals it altogether. The particular word, however, is by no means a matter of certainty. Thus, in 'Water is good,' no one fails to see that *good* applies to *water*. Whether, however, it applies to water as water specifically, or to water as a member of the class of *liquids*, or to water as a member of the higher class of *things* in general, may be a matter of doubt. Hence, while one gives the sentence in full as 'Water is good [water],' another may make it 'Water is [a] good [fluid],' a third 'Water is [a] good [thing].' That *water* is the object to which *good* applies is clear to all three; but the particular class of objects to which the water thus spoken of is referred may be doubtful. In English this difficulty of fixing the particular word required for the Adjective is of no great importance. Where the Adjective, however, varies its form with the gender of the word with which it agrees, the particular word by which we fill up the sense is matter that requires consideration. Even in our own language we have seen something of the kind. In the notice of the construction 'I have ridden a horse,' it was remarked that though *ridden* referred to *horse*, it did not agree with it in gender; the gender being the neuter, and the parsing of the sentence being *I have* [as a] *ridden* [object] a horse, rather than *I have a ridden horse*.

Parts of Speech.

Adjectives or Nouns Adjective?

Such is the notice of the Adjective when it forms the part of a name, the remainder of which is supplied by the context. By itself, however, it is no more a name than a part of a whole. As its complement, however, can be understood, it takes the guise of a name. In the 'white of the eye,' or the 'white of an egg,' it comports itself differently: indeed, it comports itself as a true name, and has a plural form; for we can turn up the *whites* of our eyes, and beat up the *whites* of two eggs. But it is no longer an Adjective. The *white* of the eye is as much of a Substantive as the *pupil*; the *white* of an egg as much of a Substantive as the *yolk*. Yet the word which is now so thoroughly a name was originally only a part of one; the *whites* of eyes and eggs being, originally, the *white parts* of them. In these cases, the Adjective becomes a name by ceasing to be an Adjective. How far this rule is general will be considered in the sequel.

That an Adjective is very nearly a name, and that, ceasing to be an Adjective, it may become a name, has now been shown. Can we call it a word which suggests a name? In the preceding instances, so long as it remained an Adjective, it certainly required a name in order to become significant. It referred us to the context for a name. It suggested the necessity of a name. Still, it scarcely suggested the name itself. The context suggested this; or rather it supplied it. There is, however, a class of names which the Adjective truly suggests. What are they? Take any Adjective, add the syllable *-ness*, and the answer is given. *Brightness* is the name suggested by *bright*. This is a name, and a true one. It is the name of a quality. We may use the simpler form *bright* in its stead; but this only shows that certain words have two imports.

A quality is an attribute of a certain kind. All qualities are attributes, but all attributes are not qualities, inasmuch as it is the custom to limit the term quality to the attributes of Adjectives only. Qualities, in the ordinary sense of the term, are permanent, like the *weight* of a stone or the *colour* of a rose. Relations are changeable. Adjectives express qualities, Pronouns relations. Hence, Attribute is the more general term for the two. There are both laxity and unsteadiness in the application of the two terms, and it is doubtful whether they are the best that could be devised. The difference, however, between an ordinary quality and a relation is real. A quality may be considered by itself: a relation always implies a comparison with something else; and, as this second element in the comparison may change, the relation itself may change also. Hence the convertibility of Pronouns as names. Hence, words like *I*, which means the speaker whoever he may be, sometimes mean one person, sometimes another; the same applying to all words in the same class, or to all Pronouns. Such are the reasons for naming our Substantives and Adjectives as simply as possible, i.e. for avoiding the use of the word Noun.

Of Adjectival Adverbs, the most characteristic word, or, at any rate, one which well exemplifies and illustrates it, is *well*. We can say, *I am well*, just as readily as we say *I am healthy*. Yet *well*, in most respects, passes for an Adverb; and Adverbial it certainly is in such expressions as *I am doing well*. Here, however, it follows, and attaches itself to, the predicative element of a

Verb; for, as has already been stated, a Verb consists of a copula and predicate amalgamated. To follow a copula only, and to complete a proposition, the word must form a predicate by itself. Some words which are Adverbial, and, as such, incapable of doing this, in other respects can do it, by being more or less Adjectival.

Of Pronominal Adverbs we may take *where*, *there*, and *here*, as the representatives. Logically, they come under the same category with the Adjectival ones, being, like them, sufficient to form a term by themselves. In origin, however, they are different. They are the cases of certain Pronouns, in a certain gender and a certain number. *Where* is what some might call the Dative, and some the Locative, case singular and feminine of *who*; some words meaning *place*, *quarter*, *region*, or *direction*, of the feminine gender also, being understood: thus giving a good instance illustrative of what has been already said concerning the difference between our ability to supply the omission in a sentence where the Substantive is understood generally, but not specially.

There stands in the same relation to the *th* common to the words *this*, *that*, and *the*. There is some indistinctness here; but, as the only matter which stands before us is the original Pronominal character of the words, the exact details are unimportant. It was, in some cases, a case of the Demonstrative Article indicating comparative distance (of what is now *that* as opposed to *this*); and it was also the same case, in the same number and gender, of what is now the Definite Article. As a true Demonstrative it was used just like *ἐκεῖνη* in Greek; as an articular Demonstrative, like each of these words, when its Substantive was a Noun of place, often stood alone, so often as at last to become an Adverb of place rather than the oblique case of a Pronoun.

Here stands in exactly the same relation to *he*, a word which, though now used as a Personal Pronoun, was originally a Demonstrative signifying nearness or approximation rather than distance of removal; in other words, differing from the formations of the roots *th* and *wh*, as *hither* differs from *thither* and *whither*.

These are Adverbs from the Dative feminine. *When* and *then* are Adverbs from the Accusative masculine.

Why, in like manner, was a case (often called the Instrumental) of *who*; *the*, in expressions like *all the more* or *all the better*, being the same case of some form of *th*.

There is a point connected with the construing of these words with which it will be well to make ourselves thoroughly familiar. That they can by themselves form the predicates of propositions, and, though Adverbs, comport themselves in this respect as Pronouns, has already been shown. But the following sentences seem to say that they can do something more; i.e. that, like Pronouns in general, they can form Subjects as well as Predicates.

Where is he? When was it? There is something.

These, I submit, seem to give us instances of *where*, *when*, and *there* being used as subjects. At any rate, they take the subject's place in the proposition. But they are subjects only in appearance, not in reality. But they are merely Predicates with their order reversed.

I now pass to a division of the subject in which the complications are even more numerous than they have been.

Bearing in mind the tendency of words to pass from one Part of Speech to another, and the knotty points that are raised by their transmutation, let him ask himself what would be the additional difficulties created by such a state of things as the following. Let three Parts of Speech have a tendency to change. Let their external characteristics be, at one and the same time, alike and different. Let these also change; and that in such a way as to end in becoming identical. Thus, let a word ending in *-unge* lose the final *e*. Let the *-ung* that then remains become *-ing*. Thirdly, let a word ending in *-and* or *-end* also change that syllable into *-ing*. The result is that three words originally different become one. How are we to separate them? By the signification? No; for it is also assumed that the significations have coalesced also. Surely, there are ample elements of doubt and ambiguity here.

The
Participle.

Indeed, they are so ample and of such practical importance in the consideration of the nature of the Parts of Speech that, what with the immediate question they constitute, and what with the further questions that they suggest, they are likely to delay us longer than all the others put together.

They introduce the complicated discussion as to the nature of the English Participles. How far is the Participle a separate Part of Speech, or how far is it involved in the Verb? Should Participial forms have separate entries? Supposing that they should, should the different kinds be entered separately? Should there be one entry for *Speak*; another for *speaking*; and a third for *spoken*? Or should the single entry *Speak* cover the other two? Should the word *Participle*, or its abbreviation *part.* be used freely, be economized, or be wholly ignored? There is much to be said for each of these doctrines. And first let us touch the double question as to (1) the extent to which the existence of the Verb implies the existence of the Participle, and (2) the extent to which the existence of the Participle implies the existence of the Verb.

Parts of
Speech.The
Participle.

(1) The Participle is usually dealt with as a form of the Verb, and that in languages where its independent character is much more prominent than it is in English. Now, if we treat it simply as this, and look upon forms like *spoken* or *speaking* merely as so many ordinary details in the conjugation of *Speak*, there is no more need for honouring them with any particular notice than there is for seeking special instances of the Second Person Singular, or of the Preterite Tense of the Verb; for the ordinary rule is to enter the Verb in its simplest form, it being a matter of indifference in what form the extracts exhibit the examples. Hence, nothing is commoner than to find, under such an entry as *say*, examples of (perhaps) *said*, or *sayest*; the existence of an inflection being allowed as proof of the existence of the Verb upon which it is founded. But the Participle is something more than a mere inflectional detail of this kind. It is this even in the present English, where it is undeclined: how much more so in Anglo-Saxon, where, as in the Latin and Greek, it had a full declension, with its four or five cases, its two numbers, and its three genders! Now, certainly, if we look upon the Participle in this light, it assumes the importance of a separate Part of Speech, and should be treated accordingly. Nevertheless, according to the principle on which ordinary dictionaries are constructed, it would be a great waste of room and work to enter all the Verbs and all the Participles separately; since, practically, notwithstanding some exceptions, we may safely trust to the general rule that the existence of the one implies the existence of the other.

How far
implied by
the Verb.

Hence, as a general rule, wherever there is a Verb there is the corresponding Participle; the only exceptions being the few words which are, in the strict sense of the word, Defective. Of these the most typical is *quoth*. It would certainly be difficult to find any moderately modern example of *queathing*, *queath*, or the like, however common the simple form may have been in the older stages of our tongue. Meanwhile, the compound *bequeath* has for its Past tense *bequeathed*. *Shall*, *can*, *may*, *must*, and a few other words of this kind, complete the list of Verbs of which the existence of one mood, tense, or person does not imply the existence of the others. The conjugational inflections in English are few, and, as a rule, *all* are found where *one* is found.

(2) How far is the converse the case? Does the existence of a participial form always imply that of the simple Verb? Johnson's practice, in some words at least, suggests that he considered that it did. The word *aberr* is entered as a Verb; yet the only quotation which accompanies the entry delivers the Participle *aberring*. The absence, however, of the simpler form is noticed by Todd, and the deficiency made good. Though the additional instance thus supplied is, doubtless, a good thing as far as it goes, the principle upon which it is inserted is a doubtful one; for the exception taken to Johnson's entry implies that, *if no instance of the true Verb had been found*, the word *aberring* should have been entered as a Participle.

Does the
Participle
imply the
Verb?

Upon this point I am at issue with my predecessor, though not without admitting that there are many facts in favour of his view. There are many Verbs which are oftener and more easily found as Participles than as aught else. There are some in which the Participial form is comparatively common, the forms other than Participial rare. There are, doubtless, some words in which it would be difficult to find an Infinitive mood, a Second Person Singular, or a Preterite Tense at all. Still, the difference between a form which is merely difficult to find, and one which is actually nonexistent, is considerable; and I think that to enter Verbs as Participles, simply because some non-participial form has not been discovered, objectionable. Unless accompanied by some special caution to the contrary, such an entry would suggest the notion that the ordinary Verb was not only not discovered, but that there was some reason for its being undiscoverable.

Parts of
Speech.

Participle.

Hence, in the present edition there is no such entry as *part.* or *participle*, pure and simple. If the extract give us only a Participial form, and even if a non-participial form have been sought for in vain, the word at the head of the entry will be the Verb from which it is derived; supposing always that such a word has a *probable*, potential, or developmental existence. In other words, the Participle will always be supposed to prove the Verb, where the Verb can be presumed.

But if such a Verb be *improbable*? In such a case, I submit that on the strength of that very fact, the secondary word is no Participle. That this assumes, as an element in our definition of the word Participle, a correlation between it and the Verb, is plain; and it is possible that the reader may consider the assumption an illegitimate one. If so, it is hoped that a further enquiry may modify his opinion. And enquiry is needed; inasmuch as almost everything connected with the English Participle is obscure, ambiguous, or equivocal.

Forms in
'-ed' and
'-en.'

If we ask how many Participles there are in English, we ought to know beforehand by what test one Participle is separated from another. The ordinary grammars give us two; the terms by which they are designated being uncertain. This is because they are sometimes called after a Tense, and sometimes after a Voice; words like *speaking* being either *Present* or *Active*, and words like *spoken* being either *Past* (*Preterite*, *Perfect*), or *Passive*, Participles. Perhaps, the fashion of connecting them with a Tense is the commoner. What, however, are the Tenses; or, rather, how many of them are they? Are the *Passive*, or *Past*, Participles *spoken* and *called* the same, or different: are they single or double; one or two? Do they each belong to the same Tense; or are there more Tenses than one? We must again decide upon the test. Whether Tense or Participle, every word has two criteria, its meaning and its form; and it is easy to see that, in the case before us, they conflict. In *I called* and *I spoke* we have two forms, but only one meaning; and we have the same in the Participles *I have called* and *I have spoken*. The form in *ed* is one thing, the form in *en* another; but the meaning of the two is the same. When preceded by *is* they are *Passive*; when preceded by *have* they are *Past*, *Preterite*, or *Perfect*. Now as we usually recognise only *two* Tenses and *two* Participles, it is clear our usual test is a word's meaning, or import, rather than its form. For the mere purposes of the schoolmaster this may possibly be as convenient as it is simple. In the higher departments of philology it is a snare and a blunder. The only true test is the form; words with different forms belonging to different divisions of the grammar, even when their meanings are the same.

The Greek and Latin languages must always be referred to in questions concerning the English Participle; and the two must be taken together. Now, measured by the Greek, it is safe to say that *called* and *spoken* are as different from one another as *τυφθεῖς* and *γεγραμμένος*; and also, that they are in the same relation to *called* and *spoke* as the Greek Participles are to *ἔτυψα* and *ἔγραφα*. This means that the one is an *aorist*, the other a *perfect* Participle; *called* and *spoke* being *aorists* and *perfects* also. The evidence of this is now well before the world; the Mæso-Gothic having supplied it. In that language the so-called irregular *Preterites* are true *Perfects* after the manner of *τέ-τυφα*. They have always a reduplication, and sometimes a change of vowel as well,—*salta*, *sái-salt*, *laia*, *lái-lo*. In Mæso-Gothic, moreover, the *perfect*, as opposed to the *aorist*, construction is retained; so that *beaten* = *τετυμμένος* rather than *τυπτόμενος*, and *they are beaten* = *they have been beaten*, i.e. *they are persons who have suffered* (not *persons who are suffering*, or *are in the habit of suffering*) a beating. That, in English, the distinction of meaning has been lost, and that few Verbs retain *both* forms, are, doubtless, important points of difference. They fail, however, to affect the historical distinction between the forms under notice. In short, we have, in English, *two* Past Tenses, and *two* Past Participles. The grammars that ignore this are no worse than those which do the same with the Latin; where the same fact is similarly disguised. *Momordi* and *vixi* are the same Tenses only as *τέτυφα* and *ἔγραφα* are the same, i.e. not at all.

The *Passive* Participles, then, correspond with the Greek forms in *-eís*, *-os*; as *τυφθεῖς*, *τετυμμένος*, *λεχθεῖς*, *λελεγμένος*, &c.

Forms in
'-ing.'

The *Present* Participle now comes under notice; and, as there is a shade of doubt over the character of the existing forms in *-ing*, a shade which will darken as we proceed, I shall deal with the words of the Anglo-Saxon period only; and, having fixed the relations of these to the Latin

and Greek, reserve the question of their connection with words like *calling* for the sequel. And first and foremost be it noted that the Anglo-Saxon termination was not *ng*, but *nd*,—*bærnand*, *luſiand*, *cleopiand*=*burning, loving, calling*; the same being the case with the allied languages in general; German *lebend*, *liebend*=*living, loving*; Danish *brennend*=*burning*, &c. The literary languages as a rule give this form in *-d*, and even the provincial forms, in general, retain it. In other words, the form in *-ing* is exceptional. With what does this form in *-end* coincide in Greek? Not with the Participles in *-ων*; though the fact of the oblique cases ending in *-οντ-ος*, *-οντ-ι* (*τύπτ-ων*, *τύπτ-οντος*, *τύπτ-οντι*), on the first view, suggests such an affinity. Nor yet, of course, with the Latin forms in *-ens*, *-entis*; these being in the same category with the Greek in *-ων*, *-οντος*. It is with the Greek Infinitive as construed with the Article (*τὸ φθονεῖν*), and, most especially, with the Latin Gerunds, and the so-called Future in *-dus*, rather than with the ordinary Participles that, form for form, the Anglo-Saxon and German Participles in general coincide—or, at any rate, with words like *volvend-us*, *volvend-i*, &c., rather than with words like *volven-s*, *volvent-is*. Hence, even in the earliest stage of their history as English or German words, they are less truly and typically Participial than their fellows in *-ed* and *-en*. How Gerunds differ from Participles is a point of Latin rather than of English grammar: be the difference, however, what it may, it is the former with which the words in *-pd*, the latter with which the words in *-en* and *-ed* correspond. This is enough for the present upon the Participles as such. I now return to the question of the correlation between the Participle and the Verb.

Correlation has been assumed in respect to the first part of the subject, or the question whether every Verb has its corresponding Participle; the only exceptions being those presented by the words *quoth*, *can*, *shall*, and a few others. This question, however, is so much the minor one that it need not delay us any longer.

It has also been assumed in respect to the second part, or the question whether every Participle has its corresponding Verb. But here, as the complications are both numerous and important, the reader may fairly make enquiries as to the principle upon which the assumption is made. Is it based upon real facts, or is it a mere matter of definition?

In the foregoing sentences I have used the word *improbable*, rather than *impossible*, and have given the term all the importance with which italics can invest it. *Impossible* is too strong a word. Verbs which are at the present moment non-existent may, as will be seen in the sequel, be developed; or, changing the phrase, they are *developmental* or *potential*. They exist *in posse*; and may take birth by processes now going on. The forthcoming details, however, will make this clearer.

I. There are Participial forms like *landed* and *talented*. The latter has been, as is well known, objected to, and that by so influential an authority as Coleridge. This objection is more fully canvassed under *Gifted*. Let us see how the matter stands. *Landed*, whether admitted or not, is used by most of us; and the fact of its use must be taken as we find it. It is submitted that every combination of sounds which delivers the name of an object may also deliver the name of the act by which that object is supplied or provided. The name of the object is a Substantive, as *horse*. The word by which its supply or provision is denoted is a Verb, as in '*horse a coach*.' From the Verb may be deduced a Participle, as '*the coach was horsed by Mr. A. the chief proprietor*.' I make no apology for the homeliness of the example. What happens with one word may happen with more than one. Nevertheless, though to *horse* is common, to *land* (= supply with *land*), to *talent* (= supply with *talents*) are rare, perhaps unlikely. And still more unlikely is such a word as to *gift* (= make *gifted*). It is unlikely, and there is a reason for its being so. It ends in *t*, a Substantival termination, and, so doing, carries on its face the visible and manifest signs of its non-verbal character. Still, the word is possible. Now these give us Participial forms for which the Verbal correlative is wanting; and it is wanting, not because it is undiscovered, but because there are reasons against its being discoverable. *Gifted*, then, and *landed*, and *talented*, and others like them are entered as *Adjectives*. There are adequate reasons for denying that words like *talented* are Participles. To deny, however, that they are English words is merely saying that what is ought not to be. So much for certain simple, or uncompounded, words,

Words like

Adjectives.

II. I now proceed to certain compounds. In treating words like *able-bodied* as Adjectives, I only follow the example of my predecessors. There is certainly no such compound as *able-body* = endow with an able body. Nor, what is more important, is there such a pair of words. There is no such word as either *body* (a Verb) or *bodied*.

Able-bodied, then, is no Participle, but an Adjective; and, if we were merely called upon to show how we can get a Participial form without a Participle, our work would be done. But the words in question give us a far more curious phenomenon. They give us two words of which only one has a separate existence. There is not only no such word as *able-body*, but there is no such word as either *bodied* or *body*, i.e. as a Participle or a Verb.

And here I must anticipate an objection. It may be said that there *are* such words as *bodied* and *body*. We have them as short for *embodied* and *embody*. But these are not the words we want. We want *body* = supply or endow with body; and *bodied* = supplied or endowed with body. We can speak of an *able-bodied man*, or a man with an able body, i.e. a body of a particular kind; why not of a *bodied man*, or a man with a body in general? Why do we get a name for a quality of a particular kind, but no name for the quality in general?

Again, we have such words as *long-bearded*, *long-fingered*, and the like: but none such as *beard* or *finger*; the words meaning endow with beards or fingers generally, and irrespective of their length or any other particular quality. That we have words like *beard* and *finger* is true. But they have meanings of their own. To *beard* a man is to brave him by pulling his beard. To *finger money* is, not to endow it with fingers of its own, but to touch it with the fingers of the fingerer. Again, we may *head* (be at the head of) *an army*: but to *head a man*, though by so doing we make him *long-headed* or *light-headed*, in the sense of supplying him with a head, is a rare expression. Yet we may *behead* him, or take his head away.

Now I do not say that *head*, *finger*, and *beard*, even in the sense thus denied to them, are not possible words. We may say that we *head*, *beard*, or *finger* a man, when we give him a *finger*, a *beard*, or a *head*. But we seldom or never do say it; and there is a reason why we do not. *Heads*, *beards*, and *fingers* are things with which we rarely supply people.

Verbs convey actions. Actions imply agents. Now it is not the practice of language to find names for every possible action; nor even names for every action that is suggested by some other name. In order for an action to take a name, it must be something more than possible, contingent, or implicit. It must make itself, to a certain extent, plain, conspicuous, prominent, and definite. It must have some manifest active element in it. It must be something more than a mere state; a state which, though it may be the result of some previous action, is yet so obscurely connected with its causes as scarcely to be an action at all, or, at any rate, the action of no definite agent; for, where the agency is obscure or indefinite, the action is obscure or indefinite also. We have a word for *beheading*, though not one for *heading*, a man. This is because an executioner, as an agent, is a much more definite object than Nature. We know what takes away anything; we do not know what gives it.

If this view be accurate, a large proportion of the words under notice should originate in the names for the different parts of the human body; these being just the objects with which men are supplied, but with which they are supplied by means or agents which are preeminently indefinite and obscure. Hence their existence is taken as a matter of course; while no one tries to name the agency by which they were effected. We are furnished with our heads and eyes during the dim period of our fetal existence; and we come into the world so thoroughly provided with them, that few men who are not physiologists ask any question about our *heading* or *arming*, as long as it conforms to the ordinary standard. Hence, it is only when it assumes any particular character that names are required for it; and then terms like *long-headed*, *bright-eyed*, *Roman-nosed*, *ass-eared*, *light-fingered*, *thick-skinned*, and the like, take birth.

All this is actually the case. The compounds referable to the names of the different parts of the human body form the bulk of the class under notice, the class itself being a natural one.

a. Every word belonging to it can be made into a compound ending in *-ed*; i.e. to any name of a part of the human body that Participial termination may be added, and a Substantival

Adjective prefixed. To the preceding examples add *broad-backed*, *white-livered*, *pigeon-toed*, *long-winged*, *fair-haired*, *faint-hearted*, and others.

Parts of
Speech.

b. In all these cases the second element, either as a Verb or as a Participle, will be either rare or nonexistent.

Participle.

c. This, of course, means that it retains the sense conveyed by it as an element in the compound. With a change of sense such simpler forms are common enough: indeed, with such a change they almost always exist. We *head* armies; we *beard* our foes; we *back* our friends; we *eye* our ground; and when, instead of supplying an animal with an integument for the framework of its body, we rob it of one, we *skin* it.

The exceptions prove the rule. The ordinary complements to the ordinary Verb are the Nouns in *-er* and *-ing*; e.g. *hunt*, *hunter*, *hunting*. Now, where the action is as obscure and indefinite as it has just been represented to be, the Noun is not likely to be found where the Verb is wanting. The two kinds, however, are not in the same predicament. If we abstain from the use of *head* = *supply with head*, we are not likely to talk about *headers* = *head-suppliers*, or *head-furnishers*, of course in the sense here required. But *heading* we may talk about; for that applies to actions of which the agent may be extremely obscure: all that is required being that the action or process itself should be clear. Still as no one sees our *heads* or *eyes* develope themselves, even such approaches to the Verb *head* and *eye*, as *heading* and *eyeing*, are wanting. *Teething* however we do say; and this because our teeth show themselves after we are born.

So much for the words that, notwithstanding their Participial form, are really Adjectives; Adjectives resulting out of the combination of a Substantive with an Adjective or another Substantive as a prefix, and a Participial inflection as an affix.

I conclude with the notice of a few words of a different character; words like *thunders*, *rains*, and a few others. They form a natural class; being founded upon the names of certain well-marked physical phenomena. Here, though the agency is obscure, the Verb exists; the reason lying in the striking character of the actions themselves. The agent, however, has the indefinite name of *it*.

And so it is with the other chief division of the so-called Impersonals; words that indicate some perception or feeling. The opinion, sensation, or emotion, is plain enough. It is a certain state of mind; so that we are sure enough of its existence. The agency however is indefinite; and, accordingly, words like *seems*, *tires*, *repents*, &c., like the words *thunders* and *rains*, are chiefly found in the third person, with the indefinite *it* for their subject.

If every Participle have its corresponding Verb, what are we to say to such words as *above-cited*, assuming that there are no such Verbs as *above-cite*? Let us analyze. The first element is an Adverb; the second a Verb. But this is not all. The Verb is always *active*; a Verb neuter, or a Verb intransitive, being in such a combination impossible. This is because the word in question has always either a Substantive or a Pronoun with which it agrees; as 'the above-cited passage,' 'the author above-cited.' Now when we recast such phrases as these in such a manner as to convert the Participle into the Verb, the Verb not only governs the Noun, but is *followed* by it in such a way as to separate it (the Verb) from the Adverb. Hence 'I found it in the *above-cited* author,' gives 'I have *cited* the author *above*.' No wonder then that we look in vain for such Verbs as *above-cite*.

Words like
'above-
cited,' i.e.
Participles
with a pre-
fix.

It is well known that in dictionaries many words of this kind are to be found. They are generally entered as Adjectives; the entry making them single words. As the Verbal character however of the second element is undoubted, and as they are really Participles preceded by an Adverb, I have entered them as such; i.e. as Participles with a Prefix. This means that *cited* is a Participle of *cite*, and that *above* is an Adverb prefixed to it.

Words like *able-bodied* agree with words like *above-cited* in their termination. In every other point, however, they are rather to be contrasted than compared. The first element is an Adjective rather than an Adverb; the second is anything but a Verb. Decompose *above-cited*, and *cited* is as good a Participle as we need wish. Decompose *able-bodied*, and the cases where we can use the word *bodied* by itself will be few. The result of the combination is a single word, rather than a pair of words; just the opposite of what we found in the words of the last class.

*Parts of
Speech.**Participle.*

Words like
'unpolish-
ed,' &c.

There is another well-defined class of words of this kind; those wherein the Participial ending is passive, the Verbal part, as a matter of course, active, and the prefix a Participle conveying a negation. In the Verb such a prefix has no place, inasmuch as it merely implies that nothing is done. We *polish* a piece of wood; but merely to omit doing so is not to *unpolish* it. To *unpolish*, is to take away a polish which previously existed. A man, however, of *unpolished* manners, had never any polish at all. For leaving things simply as they were there is no negative word. *Un-polished*, then, in this sense, is pre-eminently a word in the same category with *above-cited*. Neither has a Verb to correspond with it. Each combination, however, contains a true Verb. Many people are *uninfluenced by circumstances*; but there are no circumstances which *uninfluence* them, i.e. do nothing at all with them. There are no names importing activity for *non-actions*; or, if there are, they are compounded of *non-*, and belong to the artificial language of logic of contraries. Under the letters *i* and *u*, where the words merely begin with the negative prefixes *in-* and *un-*, will be found numerous Participials of this sort.

In the present class there are several words in *-ing*, as *far-seeing*, *good-looking*, *well-meaning*, &c., where, of course, such Verbs as *far-see*, *good-look*, *well-mean*, &c. are out of the question. Little, however, has been said about them. The forms in *-ed* are amply sufficient to illustrate the principle under consideration; whilst, as is now about to be shown, the forms in *-ing* are encumbered by special complications of their own.

Words like
'birdcatch-
ing,' and
'stargaz-
ing.'

If every Participle have its corresponding Verb, what are we to say to such words as *leave-taking*, *birdcatching*, *sightseeing*, &c.? Even thus: that there are certainly no such Verbs as *leave-take*. It is not in English as it is in Latin, where *birdcatcher*, rendered not only *verbatim* but *seriatim*, is either 'qui aves captat' or 'qui captat aves,' but it is simply and exclusively, 'qui captat aves'—A *birdcatcher* is one who *catches birds*; the word *birds* coming last. The fact of this being a plural, though not unconnected with the fact of the compound denoting a habit or business rather than a simple act, need not be enlarged on. The order or arrangement accounts for all that is needed, making the word *birdcatch*, to say the least, unnecessary. Such are the reasons for holding that words like *birdcatching*, however Participial in form, have no words from which they may be deduced, and are consequently no true Participles. That they may, in course of time, have their Verbs, is likely enough; their Verbs to match, their Verbs that give a *correlation*. But this correlation will not be of the kind here required. It will be a correlation in which the Participle is the primary form. Let us say that *feeling* is a derivative from *feel*. It is certain that, if ever we get the word *birdcatch*, it will not be the base of *birdcatching*, but its derivative. Even at the present time, secondary Verbs of the kind we question are in a process of formation. Hence, all we can say concerning the foregoing limitations is that they apply to the language in its present state.

There is certainly such a word as *wetnurse*. To go out to *wetnurse* is not uncommon among the members of the profession; and what the applicants use in their application the hirers may adopt in their hiring. *Haymake*, too, is an actual word. About the beginning of June the grass-land farmer, in the parts about London, prepares to *make hay*; that is, to cut, dry, lead, and stack so much grass in such and such a field; the operation being definite. At the same time a whole host of itinerants from the Midland Counties go out to *haymake*, i.e. to earn what they can as *haymakers*. Now, if a class be real, what affects one member of it may affect all. Hence the analogy of *wetnurse* and *haymake* may extend to *birdcatch* (i.e. be a *birdcatcher* or *take to birdcatching*) and what not. Again, we have seen that there is the word *teething*. Let some condition be discovered under which it becomes a process easily connected with its cause, and *teeth*, as a Verb, i.e. supply with teeth, becomes probable. Again, let wigmakers talk of *hairing* a man; hairdressers of *whiskering* him; theatrical costume dealers of *bearding* him; and so many more Verbs are approached. Let men whose talk is of embryology and development talk of the stage when cartilage becomes ossified as the *boning* time, and a similar approximation is exhibited. Let others in their several departments do the same, and the Verbs which were once but Verbs *in posse* (and that unlikely ones) become real.

Such is the general sketch of the principle which makes the Verb in which alone such words as *sightseeing*, *birdcatching*, &c., could originate, in the present stage of our language at least, and as a definite class, philological nonentities—nonentities rather than impossibilities. What is the analysis of its details? It is already suggested. The first element is a Substantive, the second an *Active Verb*. But, when an *Active Verb* governs a Substantive the Substantive comes last. Hence, as aforesaid, *birdcatchers* are men who *catch birds* (not *birdcatch*), and the craft, art, practice, or business of men who *catch birds* is (*birdcatching* not *catchbirding*). Hence the want of correspondence. To this statement that the Verb is *Active*, the chief exceptions are the compounds of the Neuter Verb *gaze*. They seem, however, to belong to that class of words where, for a certain rhetorical purpose, it is better to violate the grammar than to follow it. Even now *stargazing* and *stargazer* are not complimentary terms; for no one would apply them to a scientific observer of the heavens, without implying that he was deficient in some point or other connected with sublunary affairs. Though unable to give the details, I have little doubt but that at its origin it was what Bentham called dyslogistic. It seems to have been a word of a class; one which also contained *Bird-gazer* and *Bowel-gazer*; each of which seems to have been a contemptuous rendering of *auspex* and *extispex*, respectively. In like manner *Star-gazer* was meant to represent the notion conveyed by *astrologer*, or perhaps *οὐρανόσκοπος*. If so, the worse the grammar the better the word.

To conclude. What may come hereafter is a matter of calculation; what has taken place to the present time is a matter of fact. That no one has ever said *leave-take*, *birdcatch*, *sightsee*, &c., I will not venture to say. I have failed, however, to find them in any writer. I have never heard them; and I find them, when I say them to myself, grating to my sense of the analogies of language. Without refining further on the matter, I shall presume that my readers do the same. Should it not be so—should there be any of them who have actually met with the verbal forms—should there be any who are not offended with them—any who, when put in mind of them, may think them good additions to the language, and hold that, if not English, they ought to be so—to all such I have merely to remark that I am not prepared to deny this. I only hold that it may all be granted, and yet the words be other than Verbs in the ordinary sense of the term as used when we compare the Verb with the Participle. The ordinary Participle is derived from the Verb. If these words ever become part and parcel of the English language, they will be Verbs derived from the Participle. They will take their meaning from either the Participle or the Verbal Substantive, *stargazer*, *leave-taker*, *merrymaker*. They will not mean to *gaze at the stars*, to *take leave*, or to *make merry*; though, of course, they will mean something very like this. They will rather mean *be a stargazer*, *be as one taking leave*, and *be a merrymaker*, a difference which a little practice in the finer shades of language easily enables us to understand.

Let the words, then, in *-ed*, *-en*, and *-ing*, when they imply or are implied by a Verb, pass for Participles pure and simple: and when they have no Verb to correspond with, be called either Adjectives or Participles with a Prefix. What are we to say when the form is Participial, but the construction Adjectival? Even this—that we have a *Participial Adjective*. This is no new term; it may be found in Johnson. We may ask, however, what it is that makes it. Is it the form, the sense, or the construction?

a. The *form*.—This when taken alone is scarcely conclusive. Form for form, *drunken* is the Passive Participle of *drink*; etymologically, a better one than *drunk*. But a *drunken* man is anything but a man who is swallowed down as a *draught*. On the contrary, he is one who *drinks* rather than one who is *drunk*. Meaning for meaning, then, the active form of *drunken* is *drench*.

b. The *sense*.—The commonest instance of a Participial Adjective is the word *thinking* when it means *thoughtful*, or *reflective*, as opposed to *in the act of thinking*. It is doubtful, however, whether this alone has separated it from the ordinary Participle; a fact which leads us to—

c. The *construction*.—A man *in the act of thinking* is a man *thinking*; a man *given to thought* is a *thinking man*. Yet *infected* in such a combination as an *infected atmosphere* is rarely, if ever, treated as anything but an ordinary Participle.

**Parts of
Speech.****Participial
Adjectives.**

No single test, then, is of general application; the fact being that they *all* take a part in the classification; and, as this is the case, we may have every degree of clearness or of uncertainty *Thinking*, so far as it is an approximate synonym of *thoughtful*, and, as such, suggests a state rather than an action, is at one end of the list: *infected*, the Passive Participle of an eminently active Verb, and, as such, suggestive of a very definite action, is at the other; having little but its place *before* the Substantive to recommend it. Between these there is every gradation and a debatable ground in the middle. This difficulty will meet us again and be more fully enlarged on. At present it is sufficient to say that in the forthcoming pages the *construction alone* is allowed to convert a Participle proper into a Participial Adjective. At the same time the Participial Adjective implies the Verb as truly as the Participle Proper implies it. I admit that all this is artificial; but I have found it convenient: and I may add that the main element in the high value thus given to the single fact of position (i.e. the fact of the Participle when it precedes the Substantive being converted, simply by the fact of its doing so, into a Participial Adjective) is strengthened by a virtual difference of construction. It may safely be said that, if the English forms in *-ed*, *-en*, and *-ing*, had now, as they had at one time, genders, numbers, and cases to change, a change in all three would be made according to their position. When used as Participles pure and simple they would be undeclined, when used as Adjectives, and placed *before* the Noun, they would be declined. In every one of the allied languages where such a change is possible, it is made; and surely, if possible, it would even now be made in the English. The Germans say *Ich habe geliebt*=I have loved; but *ein geliebtes Kind*=a loved child; and, *mutatis mutandis*, the Anglo-Saxons and the Scandinavians did and do the same. Upon this I mainly rest for the extension given to the term under notice; repeating that the class it gives us is less natural than it should be, and, also, that I have made no such distinction between the Adjective when it precedes a Substantive, and the Adjective when it is Predicative, though the change is the same. The Participial forms, however, require refinements which are unnecessary elsewhere.

A Participial Adjective, then, is a Participle which in all the allied languages has, *over and above its place before the Noun*, a fuller inflection than the ordinary Participle; and this, whatever may be its value, is a clear and definite point of difference.

**Verbal
Abstracts.**

Thus far the three Participial forms have been considered in gross. What follows applies exclusively to the form in *-ing*. It has been treated as a Participle, and it would never have been so treated had it not comported itself as such. But it also comports itself as something else. To those who are familiar with a long and eminently suggestive note in the late Mr. Richard Taylor's edition of Horne Tooke's *Diversions of Purley*, much of what is here given will be but a twice-told tale. The gist of it is to show that a great number of the words ending in *-ing* which pass for Participles are really Substantives. It was not written before it was wanted; for, until its appearance, many able men had quoted such phrases as 'the *risings* in the North,' 'the *watchings* and *wakings* of an anxious man,' as instances of Participles in the plural number. That a Participle should have a plural number is in no wise wonderful. In most languages they actually have one, but it is not a plural of this kind.

How a Participle may become a Substantive is shown in words like *agent* and *regent*. But these are the names of actors; and the name of a *man acting* and an *actor* are closely connected. It is a difficult thing, however, to imagine a Participle denoting an action—an action *in the abstract*; i.e. an action contemplated solely as such, and isolated from an agent. This is just what a Participle never denotes, though Infinitive moods and Gerunds, which are little more than Infinitive moods in an oblique case, do.

The attention of the reader is now drawn to the two following preliminaries:—

- a. That the Anglo-Saxon Participle ended, as aforesaid, not in *-ng* but in *-nd*: *lufiand*=loving;
- b. That the Anglo-Saxon Verbal Abstract ended generally in *-ung*, but sometimes in *-ing*: *cleansung*=cleansing.

Sometimes the Substantival character of a word in *-ing* is beyond all doubt, and shows itself so transparently that it is almost impossible to mistake it for a Participle, and to connect it with a Verb. Such is the case when the Verbal form has no existence. In the way of meaning and import

the word *dawning* is as good a Substantive as the word *dawn*; and, if there were no such Verb as *dawn*, no one would dream of comparing it with the Participles: but, as the Verb *dawn* does exist, the show of a case may be made out for a Participial connection. In the word *morning*, however, there is no such complication. The Verb *morri* is non-existent; or, if it exist, it does so because some one has fabricated it upon a wrong analogy, and under the false notion that the word was a Participle, and that wherever there are Participles there are, or ought to be, Verbs to match. Again, the older form in *-ung* exists. Putting, then, these two criteria together, we get the evidence in favour of *morning* being a Substantive at its maximum of clearness.

Slightly less cogent is that in favour of the word *cleansing*. There is doubtless such a Verb as *cleanse*, of which *cleansing* is doubtless the Present Participle. But the older form of the Substantive, *clensung*, not only existed concurrently with the Anglo-Saxon Participle *clensiand*, but is known to have done so; *clensung* being a common example of the termination which it illustrates.

Then come words for which the chief evidence is the existence of a plural form; words like *windings* and *risings*, in expressions like 'the *windings* of the river Thames,' or the '*risings* in the North,' along with several others.

The reader who has allowed himself to become interested in this enquiry will scarcely accuse me of over-refinement if I go somewhat farther into the question, and ask how these forms arose. What they are in Logic, in Grammar, or in meaning, and what they are as Parts of Speech; has already been shown. But what they are historically, that is, how they originated, by what process or according to what analogies they were formed, is not so easily stated.

They fall into two classes. Yet it is only at the extremes that these two classes are definitely and decidedly separated from each other. In the mid space lies a borderland, where they run into one another, and where the separation is difficult if not impracticable, just as it is with the genera and species of Botany and Zoology. (a.) Thus, with the very old words, with the words like *cleansing*, there is no difficulty in the determination of their origin. They existed at a time when the form in *-ung* was current; and when the *u* became *i*, the change affected them accordingly. At this time, too, the true Participles ended in *-and*; so that the separation was easy, the derivation from the forms in *-ung* was patent, and possibility of confusion was out of the question. All this is plain and straightforward enough. (b.) Again, with the very new ones, all is straightforward and plain. There is no existing form in *-ung* at all. The Participles themselves end in *-ing*, and, except these, there are no forms that suggest an origin. Are we not, then, justified in saying that the very new formations are Participial? We are certainly justified in saying that they never arose *directly* out of any form in *-ung*. (c.) But what are we to say about the words of a medium antiquity; to those which come to us in writings of the time when either the forms in *-ung* may have existed, or when the Participles may have ended in *-nd*; or, finally, when instances of both were to be found? It is no answer to this to say that an accurate history of the word in question would tell us whether this were really the case, inasmuch as the word may be older than the oldest author in which it is to be found; not to mention the difficulty involved in the search for the oldest author. Even if this were successful, unless we knew that the word was coined by the writer, it would give us nothing conclusive. Again, the forms in question went out of use in different parts of the country at different times; and, though I know of no districts which still retain the form in *-ung*, provincial dialects being never rich in abstract forms, the Participle in *-nd* is good Scotch at the present moment. Meanwhile the Scotch abstracts are in *-ing*; a fact which proves almost as much in favour of their independent origin as the practice of the allied languages of the Continent, where, as has been already stated, the forms both in *-ing* and *-ung* are current.

That words, then, like *pestering* or *waltzing*, words of recent origin, and other than Anglo-Saxon in descent, may be separated from words like *cleansing*, by the fact of their not being *directly* deduced from the forms in *-ung*, is all that can be said with safety. The very latest words of the class under notice may possibly be as truly Substantival as the earliest; though only *indirectly*. At the time when there was nothing but the forms in *-ung* to look to, certain derivatives were

formed; from these others; and others from these *plus* their predecessors; the mass of precedents which supplied the analogy increasing in proportion as the nature of the analogy itself became obscure.

If this question, which is now running fast into the domain of General Philology, has been treated ~~over~~-fully, the excuse for the length of the notice of it must be referred partly to the necessity of explaining a new term, and partly to the fact of the real nature of the words it deals with being less understood than that of any class of words in our language. But is the simple separation of the forms in *-ing* from Participles and Verbal Abstracts sufficient? It is not. Let it be granted that *morning*, *cleansing*, *rising*, and the like, are undoubted Verbal Abstracts; that in 'I was *walking*,' 'he was *striking* the iron,' we have equally unequivocal Participles. What are we to say to cases where the word is Participial in one part of its construction, Substantival in another? Take the word *abandoning*. Precede it by *his*. The construction is exactly that of *his hat*, or *his horse*. This it is if taken alone. Follow it by a Substantive in the Accusative case, and write *abandoning him*. This is exactly the construction of *striking him*, which is truly Participial. But what is *his abandoning the thought*? That such combinations exist may be seen by a reference to the word *Abandon*, in the very first page of this dictionary, where the extract is from so important a writer as Clarendon. Is *abandoning* a Participle? If so, how does it stand to *his*? Is it a Substantive? If so, put in its place *abandonment*, and see how the words read; or, instead of *his abandonment*, read *their abandonments*. The result will be but indifferent sense. Can we say that *abandoning* is not only a Participle, but a Participle in the Genitive case, and that it stands in apposition with *his*, so that the construing, in very indifferent Latin, would be that of *ejus* (or *illius*) *relinquentis cogitationem*? No. The Possessive case in English is not the Latin Genitive; so that, even if *abandoning* could possibly be treated as a Genitive, the word *his* ought to be changed into *of him*, and the combination adapted to the change. The complication is great. So far as *abandoning* governs *the thought*, it is a Participle; and so far as it stands in a Substantival relation to *his*, it is a Substantive. Is it, then, bad English? I can only say it is English written by an Englishman, in all probability naturally and spontaneously; and we must take the fact of its being so as we find it. There is a great deal of very fair English which will not bear parsing; English which seems to be written under the influence of two or three conflicting constructions, and to come out as a compromise between them. We cannot ignore the perturbations thus indicated. On the contrary, we shall do well if we look about for a test. After *abandoning* write *of*, so as to give *his present abandoning of the thought*, &c. This is accurate. With *of* thus inserted, we can add an *s* to *abandoning*, and write *their present abandonings of the thoughts*, &c. That *abandonings* is not a common word is true; but it is an intelligible and a possible one.

The construction of the Verbal Abstract with the Preposition *on* has left its traces in the present language. It is the *a* in combinations like *a-hunting*, *a-talking*, and innumerable other so called vulgarisms; all of which are not only good and idiomatic English, but are also Verbal Abstracts, and not Participles, Verbal Abstracts preceded, like any ordinary Noun, by a Preposition.

The Prefix
'a-' in
'a-hunting,'
&c.

But now mark, there is not a Participle in the English Language to which this prefix *a* cannot be applied; and that without impairing the sense. Wherever we can say, *I am, was, have been, shall be, hunting* (or anything else), we can say *a-hunting*, &c. The same is the case when the Verb is other than auxiliar. We can say, *he is gone a-hunting*, or *I saw him a-hunting*, and so on with any and every Verb in English. This is a point upon which any of my readers may satisfy himself, and it is one upon which he is requested to do so. The statement is a broad one, and it should be corrected if wrong; for, if true, a great deal follows from it. If every Participle can be replaced by a Verbal Abstract preceded by a Preposition; if that Preposition can in every case be dropped; and, thirdly, if the form of the two Parts of Speech be identical, what is our warrant for calling the ordinary forms in *-ing* Participles at all? But if these be not Participles, what have we which is more Participial than the forms in *-ing* when they *precede* the Noun, and which, so far as their construction is concerned, are Adjectives? Are these the only true representa-

tives of the Anglo-Saxon and Old English Participles in *-nd*? Is everything else a Verbal Abstract, which, stripped of certain accessory parts, has taken the guise of a Participle? If so, are we really to commit ourselves to the doctrine that in the English of the nineteenth century, notwithstanding the phraseology of every grammar in the language, and in spite of the fact of every one who uses certain words ending in *-ing*, using them as Participles, the whole class thus implied is nonexistent; in other words, that we have no Present or Active Participles at all?

Nay—more than this—is it certain that even the Participial Adjective is what we have supposed it to be? Is its descent from the Anglo-Saxon forms in *-nd* beyond doubt? Are words in *-ing*, even when they have a Verb to match, and when they precede their Nouns, but bastard Participles after all? How far they are Adjectival has already been stated; but what if even their Adjectival character be impugned? The best representatives of the Anglo-Saxon Participle they may possibly be, but the best may be bad. What if they be *Substantives* rather than *Adjectives*? Any *Substantive* may precede another and take an *Adjectival* import; and many such *Substantives* end in *-ing*. *Morning* and *wedding* are not only not Participles, but they are not even *Adjectives*, and *morning* in a *morning walk*, like *wedding* in a *wedding day*, is a *Substantive*. Yet, in *thinking man* and *speaking likeness* we have *Adjectives*. These instances, however, are from the two extremities of the class. With the intermediate forms and the debatable mid ground the old difficulties of gradation, transition, and ambiguity present themselves.

The question just suggested is historical rather than formal, and applies to the origin of certain words rather than to their present condition. Whatever they may once have been, they are Participles now. If a new Verb found its way into our language to-morrow, and we had to combine with it the word *am*, *is*, or *are*, we should add to the syllable *-ing*; and that *-ing* would be the same syllable which some years ago we added to the word *waltz*, when that Verb, along with the object which it indicated, was introduced from Germany. And this *-ing* in *waltz-ing* was, in like manner, the *-ing* in such words as *civilizing*, *anathematizing*, and the like; words which we are quite sure were never Verbal Abstracts of the character of *cleansing*, and *morning*.

All this we know well; and we know it because the words under notice, along with many others, came into our language long after the forms in *-ung* had ceased to be inflected, whilst the class of speakers who used them never would have said *a-civilizing*, *an-anathematizing*, and the like. On the other hand, however, we know that many of the older words in *-ing* did thus arise; and, thirdly, we are aware that for a large class of words of intermediate antiquity we cannot well say which of the two processes was the real one; in other words, *mutatis mutandis*, what has already been said concerning the Verbal Abstracts when they first came under notice has its application here. The extreme cases are plain enough; the intermediate ones doubtful and equivocal. The newest Participles are formed according to the analogy of certain words a little older than themselves, and those upon that of something older; and so we go back until we find that one Part of Speech has been transmuted into another; in other words, that between the Logical and Historical tests there is a conflict.

That the question under notice has its bearings upon the lexicography of a language is shown by the very remarks that have been made on it; and it may easily be believed that in a grammar it would be more important still. Indeed, its general bearings go far beyond the pale of the English Language: and this is one of the reasons why they have not been very generally recognized. I feel pretty sure that some of my readers whose knowledge is limited to our own language, and others who, though familiar with the classical languages, the French, and the German, have not thought much about general Philology, will accuse me of either investing a plain matter with a good deal of unnecessary mystery, or over-refining upon a point which, for practical purposes, is a simple one. No wonder. At the first view, such combinations as *I am speaking*, or *I was walking*, seem so extremely natural as to require no analysis, and to defy refinement. There is the Verb *Substantive*, and there is the Participle; and the relations which the one bears to the other are as clear as the result effected by the combination. This gives us an unexceptionable expression of Present and Imperfect Time; an expression which, in each case, is much wanted. It is wanted because the ordinary Present Tense in English by no means

Speech
Verbal
Abstracts.

agrees with its name; for it denotes *habitual*, rather than truly *present*, actions. *I dine every day at five o'clock* is a sentence of a very different import from *I am dining*. In like manner, *I spoke* denotes a complete, *I was speaking* an incomplete, action. What way, then, is there of expressing these two conceptions of Present and Imperfect Time better and more natural than the combination before us?

So it seems to us, who are familiar with the method. There are good reasons, however, for believing that it is only on account of our familiarity with it that it seems thus natural. The evidence of language in general is against it. Indeed the process, instead of being common, is very exceptional. The Greeks and Latins, like ourselves, had both the Verb Substantive and the Present Participle; and, like ourselves, they had frequent occasions to talk of actions going on at the time of speaking, and actions which, whilst they were going on, were interrupted, and left incomplete. The necessity of such sentences as *I am speaking*, *he was teaching*, is common to all languages; yet *εἰμι λέγων*, *ἡ διδάσκων*, *sum loquens*, *erat docens*, though easily obtained by a literal translation from the English, are anything but classical. In explanation of this it may be said, that, possessing a strictly Present Tense and an Imperfect, the languages which give us such forms as *λέγω*, *ἐδίδασκε*, *dico* and *docebat*, needed no such circumlocutions as the above. But the point which is most to the purpose is the absence of them in the other languages of the Germanic class. Neither the modern Germans nor the Danes, neither the Dutch nor the Swedes, though they have no Imperfect, and though their Present, like our own, is Consuetudinal rather than strictly Present, have them. In short, the combination is a rare and exceptional one.

'Darkling,'
&c. Ad-
verbs.

But the Participial construction is not only Adjectival, but also Adverbial. Where do we find a Participle except in conjunction with either the Copula or Verb Substantive (which is Verbal), or a true Verb? If the Latin Adverb ended in *-ns*, and were identical in form with the Participles, who would be able to say whether such a combination as *ibat ovans* was the grammatical equivalent to *he went triumphing*, *he went triumphant*, or *he went triumphantly*?

And this leads us to another class of words; a small, but an important one. Its common representative is the word *darkling*. It has long been known that this is no Participle of any such Verb as *darkle*. Why? Not because no instance of the word *darkle* can be found; for, as there is no reason why such a word should not exist, its mere nonappearance is not recognized as a reason for its nonentity. It exists *in posse*. The reason why *darkling* is not treated as a Participle is because there is an undoubted class of Adverbs in *-ling*. Rare in the current English, they are common in Scotch, where they end in *-lins*; and, as *darklins* is a Scotch word, and was also, along with many others, an old English one, we may safely call it an Adverb.

1. The termination *-ling* is a double one. It is *-ing*, preceded by *-l-*; in other words, it consists of the ordinary ending of the Verbal Abstract, *plus* the sound of *l*.

2. This *-ing* is fundamentally the same as the more special ending of the Verbal Abstract.

3. The Verbal Abstracts were declined; the Genitive case ending in *-s*, the Dative in *-e*.

4. The Genitive case was used Adverbially. *Needs* (= *of necessity*, *necessarily*, or *perforce*) is one example, *unawares* is another. See also Afterwards.

5. The Dative case, preceded by *on*, was similarly used.

6. This *on* first changed into *a*, and afterwards became dropped altogether.

Hence (1) words like the Scotch *darklins*, Adverbial as they are, are, fundamentally, Genitive cases of Verbal Abstracts; and (2) words like the English *darkling* are Dative cases of the same; the prefix *on* having either never been used, or, if used, dropped. That some may be Genitives minus the *s*, and some simple Accusatives, I do not deny. Still, speaking generally, I submit that they are Datives. At any rate, the Adverbs in question are, fundamentally, oblique cases of the Verbal Abstracts in *-ing* or *-ung*, preceded by *-l*.

In an able paper in the Transactions of the Philological Society, Mr. Morriss has given us the analysis of the word *groveling*, and shown, with even an excess of evidence, that it is a word belonging to the same class as *darkling*; so that, in such expressions as *he lay groveling*, the last word only simulates, or takes the sense of, a Participle. Hence it is probable that the Verb *grovel* itself has no real and independent existence of its own at all; but that it is simply

a derivative from *groveling*, and, as such, a Verb made to match another word that looked like a Participle.

*Parts of
Speech.*

And here we may pause and take a retrospect of the principles of which the sketch has just been given, and of the nature of the complications which present themselves when we come to the details. It will be admitted that the latter are sufficiently numerous; and I hope it will not be denied that the ordinary rules of either Grammar or Lexicography are insufficient to meet them. That they may be ignored is true; for, practically, they have been ignored. The road to English Grammar has hitherto been an attempt at a royal one; the Gordian knot has been cut rather than untied: but the entangled skein yet remains; and the royal road has led us nowhere. The result of the foregoing criticism has been two principles; one concerning the accent as a test of composition, and one concerning the value of the place which a word takes in a proposition as a test of what that word is as a Part of Speech: and it is admitted that neither rule is absolute and thoroughgoing; that neither explodes doubts, exceptions, and ambiguities. That a combination should give us a true compound in some cases and a pair of separate words in others, that it should deliver a single word in prose and two words in verse (or *vice versa*), are, doubtless, inconveniences. Language, however, must be taken as we find it; not as we wish it to be for teaching purposes.

Retrospect.

And the same applies to the Parts of Speech. For Syntax the logical basis is absolutely indispensable. Yet we have seen how it is traversed by history or etymology.

1. Pronouns and Substantives, each giving names, are differently inflected.
2. Adjectives and Participles, each serving as predicates, have different etymological affinities; the former gravitating (so to say) towards the Substantive, the latter towards the Verb.
3. Predicative Adjectives become Adverbial; and, doubtless, the rule that *all* Adjectives that thus change their character are Adjectives in the neuter gender is a general one. In the Latin and Greek we know it to be so; inasmuch as in those languages Adjectives are declined, and the Neuter has its appropriate termination. But in modern English there is no such criterion; and all that can be said of words like *bright*, in *the sun shines bright* (= *brightly*), is that they would have a neuter termination, if neuter terminations existed. Considering, however, that such terminations did once exist, this is not saying too much. In other terms, we may call the Adjectives thus invested with an Adverbial import, *virtual* Neuters.
4. Nouns in an oblique case become Adverbs. What *there* and *where*, &c., are, has already been stated.
5. Some of the so-called Infinitives are Gerunds. These, in an oblique case, comport themselves as Substantives in the Nominative, and stand as the subjects of propositions, i. e. to *err* = *erring* = *error*.
6. Categorematic Pronouns (like *one*) become Articles like *an* and *a*, words which are little more than inflections; whilst a Verb (like *have*) becomes in certain combinations what we may call *sub-articular*, if not actually *articular* in its construction.

And, what is of the chief importance, none of these changes are arbitrary, accidental, or isolated. On the contrary, the nearer we come to a clear perception of the character of our language, the more we are convinced that they are simply so many parts of a system, the system of the English Language in its present state of development; a system which, instead of being explicable by the nomenclature of the classical grammarians, demands one of its own.

The current statements on this point by no means recognize this great fact in its fullness and integrity. The lax doctrine, that, in languages like the English and French, the loss of cases and tenses is made good by Prepositions and auxiliary Verbs, merely touches the surface of a much more important process. What we are really doing is this: we are, by stripping certain words of their concrete import and independent existence, and by subordinating them to others, developing a wholly new system of approximate inflections; inflections consisting of initial, rather than final, changes: a fact which, without enlarging upon it further, I submit to the reader, with the remark that it is not one which the grammarian should overlook. In a dictionary, and that dictionary not his own, but one of which he is merely the editor, this is as much as a lexico-

grapher can be expected to say in a preface. However, even in a preface, he should place the reader in his own point of view.

**Substan-
tives, &c.,
and Words
used Sub-
stantivally.**

That much has been written upon these points is evident; yet, even now, the long list of complications is by no means exhausted. It is no over-refinement to say that there is a difference between a word actually dealt with as (e.g.) a Substantive or an Adjective, and a Substantive used adjectivally, or an Adjective substantivally. Let us take two extremes as illustrative of the difference. When Richard III. says 'Talk'st thou to me of *ifs*,' he scarcely makes *if* a Substantive. He only shows that a Conjunction may take a plural ending, and comport itself for the occasion as something else. No one, however, unless with a special reference to such an exceptional case, would put *if* in the same class with *dog* or *fox*. He would simply say that it was a Particle treated as a Noun. The same with '*ifs* and *ans*,' meaning conditional, imaginary, or hypothetical propositions. In fact the terms are elliptic; signifying 'The word *if*,' and 'The word *an*;' the plural termination belonging to the word *word*. This may, perhaps, be taken as a test: but it will not apply when a man says that he knows 'all the *ins* and *outs*' of his friend's house. Here the words mean a *thing*; a thing, indeed, which may be reduced to the preceding formula by saying that the Particle means that which *in* and *out* suggest. But this is not exactly the word *in* in the sense just assigned to *if*. On the other hand, such a combination as 'the *whites* of two eggs' gives us what is all but a genuine Substantive. True it means the *white part*; but it has a definite and direct object to which it corresponds. Between the first and last of these examples there are numerous intermediate usages. In such a combination as 'the *crown* jewels,' *crown* is syntactically an Adjective; yet to enter all such words so combined separately would be to add some thirty per cent to the entries. That *if* and *in* can be used as Substantives is an accident. The English language allows, the Latin and Greek forbid, the usage. *In* and *ex*, *iv* and *εξ*, cannot be so manipulated. On the other hand, the natural translation of 'the *white* of an egg' is the Latin Substantive *albumen*. There is an approach to a test here, but it is one which I indicate rather than act upon. I only draw attention to the last of the long list of complications which are connected with the entry of words as *Parts of Speech*.

**III. DERI-
VATION.**

III. Latin words in *-o*, as Abbreviation, are entered—

[*Lat. abbreviatio, -onis.*]

**Quotation
of Foreign
Terms.**

This is because the letter *-n* has to be accounted for, which the simple nominative fails to give us.

In like manner the Participle is given under words ending in *-ate* and *-t*. Neither *abrogo* nor *excipio*, the Present forms, will account for forms like *abrogate* and *except*. The Participles do this. Hence such notices as

[*Lat. abrogatus*, pass. part. of *abrogo*.] and [*Lat. exceptus*, pass. part. of *excipio*.]:

and so on, with some other words.

This is because, in giving the derivation, I quote the word, after the manner of my predecessors, according to the entries in the dictionaries of the language from which it is taken.

a. In most languages the Noun is given in the Nominative case. Yet the Nominative case is not always the fullest or most radical form; indeed it is often a modified one. Neither is it the form from which the derivatives in other languages are taken.

b. The same applies to the Verb. But here the practice of the lexicographers varies with the language. Some quote the Verb under one form, some under another. Thus, we have—

(1) The First Person Present Indicative; as, in Latin, *amo*=I love.

(2) The Infinitive Mood; as, in French, *aimer*=*Lat. amare*=to love.

With the Latin the Greek agrees: with the French, the German and most modern languages; our own practice being, as already shown, more Infinitive than aught else. In the present edition the Verbs are entered under no inflectional form in particular; inasmuch as when we have ejected the prefix *to*, and deal only with the pure and simple Verb (say the Verb *love* or *speak*), we may call it either a Present Tense, an Infinitive Mood, or an Imperative; it being, as far as its inflection (or rather want of inflection) is concerned, anything except a Second or Third Person singular or a Participle.

The Anglo-Saxon, however, is quoted in the Infinitive Mood.

It is probable that here I might, without censure, have neglected the current practice, and have given *lufie* instead of *lufian* as the older form of *love*; but though it would have saved unlearned men from speculating about what had become of the *ii*, I have not done so. The change might have led to inconveniences which the few first instances would not have suggested.

As it is, then, the Verb in English is quoted more in the radical form than in aught else; in the Greek and Latin in the Present Indicative; in other languages in the Infinitive.

The next remark that comes under this head applies to the words *Danish*, *Swedish*, *Icelandic*, *Dutch*, *German*, and, in some cases, to words like *Bavarian* or *Westphalian*, the names for certain German dialects. These are forms of speech from which some English words are actually derived, while others are merely connected with them. Thus—

Abándon. *v. a.* [N.Fr. *abandonner*.] and **Ábdicant.** *part. adj.* [Lat. *abdicans*, *-antis*.]

mean that it was from the Norman French and from the Latin that the words *abandon* and *abdicant* were introduced into the English. Here, the name of the language (in full or abbreviated as the case may be) stands by itself. In connecting, however, certain words with the Frisian, German, Dutch, Danish, Swedish, or Icelandic languages, I sometimes, but not very often, insert the word *direct*. *Waltz*, for instance, is so entered [*German direct*].

When the addition is wanting, and the name of the language stands by itself, it means that the word with which it is connected is not found in the Anglo-Saxon; and that, such being the case, a collateral form from one of the cognate languages is substituted for the direct. This is no more than Johnson himself has suggested. Why, however, is the word not found in the Anglo-Saxon? Is it because it was nonexistent, or is it because it has not been preserved in the extant remains of the Anglo-Saxon literature? The Danish words thus entered as collateral are the most important; and they are so on account of the well-known fact of there having been a Danish conquest, and a Danish dynasty. What more likely than that Danish words should be the result? From the first settlement of Danish invaders on English soil to the death of Hardicanute there was both hostile collision and friendly contact between the Danes and the English; and, as far as opportunities for the introduction of Danish words are concerned, the long reign of Ethelred and the influential reign of Canute afforded them in abundance. What was the result? Are the Danish elements of our language few or many?

The answer to this is involved in the adequacy or inadequacy of the extant Anglo-Saxon literature; and upon this point I differ with unfeigned reluctance with many, perhaps the majority of, investigators; indeed I differ with an opinion which I have more than once, at no very distant period, myself expressed. Above all, I differ with a writer whose philological career, after promising to be one of more than ordinary brilliancy, has unhappily been cut short by a premature death. The numerous personal friends of the late Mr. Herbert Coleridge will, doubtless, anticipate his name. He was a strong supporter of what may be called the Norse or Scandinavian doctrine; and, as he had paid more than ordinary attention to the Icelandic language, his opinion was one which he was well able to support. He held that we owed much to the Norse invaders, whether Danish or Norwegian, of the British Isles; and in several very able papers, in which he maintained the cause of his favoured clients, he did much to what, at the first view, confirms it. He found it no hard matter to give long lists of words which were *not* to be found in any Anglo-Saxon dictionary, and which *were* to be found in the Norse ones, and, as a preliminary to the inferences he drew from this, he assumed (not without a fair amount of argument on the details) that, in the dictionaries upon which he legitimately relied, the Anglo-Saxon was fairly represented. He considered that enough of the language had come down to us to justify this supposition, and that if a word had left no signs of its existence in the times before the Norman Conquest, it had not existed; and he urged the doctrine, *de non apparentibus et non existentibus eadem habenda est ratio*, with all the plausibility with which it is naturally invested.

I hold, however, that such was not the case; inasmuch as the remains of the Anglo-Saxon

Derivation. literature, or at any rate of the Anglo-Saxon language, are by no means conspicuous for either their bulk or the variety of subjects with which they deal; both conditions being important, the latter the more important of the two. Of poetry, chiefly narrative and didactic, and perhaps lyric, the proportion is large; but the language of it is preeminently artificial, and farther removed from the language of ordinary life than that of any other European language with the exception of the Icelandic. With uncommon words it abounds, and it also abounds with compounds, a class of words which by no means enrich the lists of *roots*. Then come translations of Scripture, chronicles, laws, treatises on geography and grammar, charters, homilies, and one short novel or romance, none of which belong to subjects in which the language applicable to domestic life, to political thought, or to the useful arts, is notably brought into play. That the Anglo-Saxon, then, of the dictionaries, even admitting that the dictionaries adequately represent the extant literature, represents the language of all provinces of the Heptarchy somewhat better than the Hebrew of the Old Testament represents the language of the ancient Jews, is as much as can be fairly said; and if this be the case, it is transparently clear that there must be many words in English which, though really of Anglo-Saxon origin, are at present incapable of being traced to it. We may realize this inadequateness of representation by looking at the Greek language, and, without comparing the Anglo-Saxon with it either for copiousness or variety, ask what we should not have lost had either no Greek drama been written, or, having been written, not come down to us: had no orations been delivered, or, if delivered, not come down to us: no works on philosophy, no lyrical poems, no pastorals, no great political histories, no notices of the dialects—the specimens of which, though with the exception of the more important ones they are scanty and fragmentary, teem with new and otherwise strange words, words which, if it were not for the casual record of them, would, to all intents and purposes, have been nonexistent; only, however, in appearance, not at all as matters of fact.

It is morally certain, then, that the extant remains of a language may represent it inadequately. On the other hand, however, the certainty of this is by no means sufficient to justify us in assuming the existence of certain words as often as each individual case tempts us to do so, and, having so done, to reconstruct it and attribute it at once to the old language. We might do this, perhaps, rightly in nine cases out of ten; but what would be the proof of our having done so? No such boldness, however useful as a philological exercise, could possibly be allowed in a work like the present.

Debarred, then, from speculations of this kind, all that the lexicographer can do, when the direct line of affiliation is broken, is to follow the example of the genealogist, and, when the direct ascent fails, to fall back upon the investigation of the collateral branches, and, in doing this, strive to ascertain the real order of relationship.

**The Danish
Element in
English.**

I must, however, remind the reader that what I here consider is, the existence or non-existence of Danish, Norse, or Scandinavian words, *directly introduced* by the Northmen of the Danish invasions, in the *current, general, standard, or literary English*; special notice being directed to the word *direct*; whilst the *general, or standard English* is clearly separated from the provincial English of certain districts or localities. Danish provincialisms are by no means ignored; and as little is it denied that some Danish words may have come to us through the Norman-French; though of these latter the number must be small as compared with that of the former. The subject is one on which much has been written, and a variety of opinions been put forward. It is well known that in so influential a work as Hickes's *Thesaurus*, one Saxon composition of great value and importance, the Gospel Harmony, called the *Heliand* (Healer, or Saviour), was called *Dano-Saxon*; not that any exclusively Danish words were found in it, but because, being other than Anglo-Saxon, the doctrine of a Danish-influence was the hypothesis that accounted for its peculiarities. In *Dano-Saxonisms* of this kind no one now believes; the work under notice being, as stated elsewhere, a specimen of the Saxon of Germany, as opposed to that of Britain. Later still, and by scholars now living, the Danish element has been exaggerated, ignored, or explained away—perhaps in equal degrees. Sometimes the argument (against it) has been that, of the two divisions, the Angle was more Danish than the Saxon; so that what looks like Danish is, in

reality, a word common to the descendants of the mythic Dan and Angle. Sometimes (in favour of it), we have the presumptions suggested by the magnitude of the Danish conquests; the influence of such kings as Canute; and, finally, the simple fact of the superiority of the Danish mind over the Angle, a fact of which the Conquest itself is to a great degree, though not wholly, the measure and proof. This last view is preeminently favoured by the writers from the more Danish parts of England. To this add an early familiarity with Norse literature, and to the personal acquaintance with Denmark, Sweden, and Norway, and the opinion runs a risk of being transformed into a sentiment.

The legitimate method is, of course, the adduction of instances, and of these there has been no lack. The words that are, at one and the same time, both Norse and English, may be counted by the hundred. The words of this kind which are not found in any Anglo-Saxon dictionary may be counted by the score. No competent enquirer denies this. The points, however, where doubt begins are (1) the question (as aforesaid) as to the adequate representation of the Anglo-Saxon dictionaries, and (2) the proof of certain words being not only Danish, but wanting in the *provincial dialects* of Germany. When this is pressed, the presumptions from the phenomena of conquest, contact, and intermixture are fallen back upon.

Individually, I hold that in the *literary* English there is no *direct* Danish. That every Danish word which is wanting in the Anglo-Saxon dictionaries is to be found in some provincial dialect of Germany, sufficiently akin to the Anglo-Saxon to be put on a level with the Norse dialects, is what I am not prepared to pronounce. That the words, however, that are *not* thus found have diminished in number as my knowledge of the Frisian and Platt Deutsch has increased, I may say truly; and I believe that the opinion of every one whose studies have been in the same direction will approve the statement. I doubt, too, whether even the presumptions are legitimate. The law by which languages borrow words from one another is not a law founded on the mere fact of contact. Nations borrow words as individuals borrow more material elements of wealth, not so much because they have the opportunity, but because they have the need. Now, there were few matters in which our ancestors stood in want of Scandinavian vocables. They had nothing to learn from Danish agriculture or art; nothing in religion or literature. As arch-pirates the Danes might have taught something to a nation of landmen; but this the Anglo-Saxons were not; indeed the vocabulary of the sea was one which they had learned long before. With this view, then, of the Danish and English relations, even the presumptions in favour of a Danish element in the general English falls to the ground.

What the Danes actually left in England is sufficiently definite, and, if we may speak of presumptions after the fact, is by no means contrary to expectation. They settled in well-marked districts; and, as settlers, were influential ones. Nothing, however, except themselves, was new to the previous inhabitants. In Yorkshire, in Lincolnshire, in Leicestershire, in parts of Nottingham and Derby (as one large block of country) along certain parts of the coast of Norfolk and Suffolk, in Annandale (as if they had reached the West coast by sailing round), in Lancashire, in Caernarvonshire in North, and Pembrokeshire in South Wales, we find clear traces of their occupancy. But these are got less from history than from the provincial dialects, and less from the provincial dialects than from the names in the provincial topography; in other words, the *common* names of our language give us but little, the *proper* names a great deal. When a Dane settled, he took the names of the places he settled in as he found them, but only in part. The *Churches* he called *Kirks*; the compounds of *Fish* and *Ship* he converted into *Fisk* and *Skip*; calling (for instance) *Dunchurch*, *Dunkirk*; *Fisherton*, *Fiskerton*; and *Shipton*, *Skipton*. Where the Roman had been before him and left the name *Castra*, the Dane said *-caster* or *-caister*, the Saxon form having been *-ceaster*. This latter reaches us in *-chester* or *-cester*. *Grantchester* and *Bicester* are Saxon; *Ancaster* Danish. Where one of these forms is found the others are found also. Again, what a Saxon meant by *ford* was a stream or channel he could *ford* across; the Latin *vadum*. What a Dane meant by *ford* was an arm of the sea. *Oxford* was a Saxon, *Strangford* and *Carlingford* were Danish *fords*. Above all, what the Saxon called a *tún*, *town*, (or in composition, a *-ton*,) a Dane called a *-by*; so that this termination, *-by*, in the names of English towns and villages, is a Danish

Derivation.

What it really amounts to.

Derivation. Shibboleth. By tracing the details of its distribution, we may trace the boundary of the Danish occupancy, in some cases to half a mile. But all these are proper names, and what they most especially shew is the simple territorial influence of so many Danish landholders, and this was the capacity in which they permanently influenced our language. What they held of their own they named, and the names so given have been permanent; everything else having either not taken root, or grown up merely to be checked off by genuine English. This is all the Danish I find in the current English, and, as it deals chiefly with proper names, it is scarcely the Danish of a Dictionary.

In *Scotland*, and (still more) in *Orkney* and *Shetland*, this is not the case. There the Danish, in many districts, anticipated the Saxon, and came, in the first instance, in contact with the Gaelic. Nor is it the case with our own provincial dialects; though even here the Norse elements may be overvalued. What is here said applies only to the *Direct* Danish of the *Literary English*.

**Direct and
Collateral.**

Such is the notice of the word *Direct*, a word which, of course, implies the corresponding term *Collateral*. Of collateral forms, however, except so far as they bear upon the question that has just been considered, and are, in consequence of such a bearing, limited to those languages with which our own is most especially connected, few will be exhibited. Their proper place is in a purely etymological dictionary; and between such a work and the present the difference is very wide. Etymologies are here inserted solely with one view—viz. that of illustrating the meaning of the word. If they do more than this, well and good: but such is their primary use and object. Hence, there is an economy in the exhibition of them, and great caution in regard to speculations concerning them. They are only given under the chief word of a class. They are, also, only given when they are certain. Where there is doubt, the mark [?] is appended, to show that they have not been overlooked, and to indicate the points whereon future research is required. Many a word thus marked would take up pages in a specially etymological dictionary; as may be seen in Mr. Wedgwood's valuable work, from which so many extracts are taken. Some of the more interesting speculative points are occasionally suggested, by combining the derivation with the extract, and in such cases the extract is placed between brackets.

An etymological dictionary is one thing, a dictionary of any particular language another. For the former the collateral forms are indispensable; they illustrate the phenomena of language in general. In the latter they are ornamental rather than necessary. What is wanted in a work like Johnson's is the meaning of a particular word at a particular time; and for this purpose, the value of even a direct derivation may be overvalued. To know that *oak* in English was *ác* in Anglo-Saxon is to know something; but it is scarcely the knowledge that tells us what is meant by an *oak-tree*. Its logical value, or its value in determining the import of a word, is of the slightest; its true value is historical. It tells us how certain points of sound, of spelling, and of meaning have changed or stood still; and this is useful knowledge, capable of being compendiously communicated. From our French elements we generally learn more, inasmuch as the changes of every kind are greater and more interesting—more influences have been at work. What with the French and the English, and what with the Latin and the French, there are generally some instructive phenomena. But these are valuable as facts in the history of language in general, rather than as facts illustrative of the actual significations of words.

Nevertheless the importance in English etymology of the French (involving the Latin) as compared with the Anglo-Saxon has been greatly undervalued. Nine-tenths of our difficulties lie within the domain of the former; hence much that has been said about Johnson's ignorance of the languages of the German group has been said inconsiderately; my own opinion being that the objections are plausible rather than real. So far as Johnson limited himself to merely giving the older forms of newer words, he is rarely wrong in any point of importance. What he breaks down in is the spurious philology he superadds; his collateral forms from the Latin, Greek, Hebrew, and the like. But these, I submit, are his true weak points. On the point of pure and direct descent his learning in this department, though little enough, was, in a general way, enough to keep him right.

In thus holding that collateral derivations are out of place in particular dictionaries, and that direct ones, even in particular dictionaries, have been overvalued, I by no means disparage either the one or the other. My tastes and studies both go the other way. No dictionary should be without them. As compared with an explanation, or an extract, they do little; in combination with one or both, much. They supply the mind with detail after detail in the way of general philology. They invest the questions of meaning with interest. They aid the memory by giving individuality—I might almost say a biographical personality—to words. Lastly, they and they alone, help us in the historical analysis of our language. If the etymons of an English dictionary merely enable us to apportion its elements among its German, its French, its Latin, its Greek and its other more miscellaneous constituents, they would, considering the compendious manner in which such a distribution is indicated, do more than enough to counterbalance the pains taken with it.

And this distribution of the elements of our language between its two main constituents of the Anglo-Saxon, or German, on the one side, and the French, or Latin, on the other, is important. Words which may be traced up to either the Anglo-Saxon itself or to its German and Scandinavian congeners, and words which came to us through either the French or the congeners of the French of Latin origin, or the Latin or Greek direct, have very different histories. Both in scientific ethnology and in practical political history, the two groups thus suggested have always been not only separated from one another, but, in many cases, compared for the sake of being contrasted. That this contrast may amount to a real antagonism is not impossible. It is probable that it has been exaggerated; but it is certain that, to a very great extent, it is a reality.

Yet even this, so numerous are our complications, must be taken with a reservation. Real as the two groups are, it is only when we compare the extreme forms that any definite line of demarcation, as applied to the history of single words, can be drawn. A word taken directly from the Latin, as the basis of the French, though clearly belonging to a branch different from that which gives us a word which was used by the Germans of Tacitus, is by no means in the same predicament with many words which we cannot treat but as French. Not to mention a great number of terms which, from being originally, from some imitation of a natural sound, not to mention a number of others, perhaps equally great, which are common to the classical and German divisions as branches of a common stock, or as collaterals of a common family, there are the important constituents of a third group, to which the histories of Germany and France give us the clue. *France*, a word which by no means carries with it the same import as *Gaul*, is itself a German word, and it was from the German Franks that it is derived. With the German conquest of Gaul, which at the time it took place was partly Roman and partly Gothic, were introduced numerous German words, which had only to be incorporated in the ordinary French, to be either lost altogether or changed in form, meaning, or both, in the German or Anglo-Saxon of Britain, and to be reintroduced by the Norman Conquest to take upon themselves the garb of French elements in the English language. And, indeed, this is what they really are. As English words, they are French introductions; though, as French words, they were originally introductions from Germany.

The exhaustive enumeration and the analysis of these has yet to be effected. Nor is the statement a disparaging reflection upon either past or existing investigations. The means and materials are wanting. The method itself has scarcely been sketched. Even the bearings and difficulties of the question have not been generally recognized. To the number of them a rough approximation may be made either by reference to the well-known work of Ducange on the Low Latin, or by a tax upon his memory on the part of the classical scholar. Of the numerous words in Ducange which, in accordance with the title of the book, pass as Latin, though Latin of a kind foreign to the old Romans, the majority is of German origin, most of which might as easily have belonged to the Anglo-Saxon as to any other German form of speech. A majority of them, by a simple deduction from the foregoing statement, are also utterly foreign to the Latin of the classical writers. Yet these are the words which without being Latin (whilst at the same time

Derivation. they are not found in the Anglo-Saxon) the English lexicographer rightly treats as French. And French, as aforesaid, they are. Though German, and perhaps English, they come to us disguised sometimes in respect to their form, sometimes in respect to their meaning, sometimes in respect to both.

Derivation is a word with a wide meaning in the first instance; however, its explanation is a very simple matter. In the first instance it is neither more nor less than the comparison of two words in the same dialect of the same language, but belonging to different stages of it, with the newest form and meaning on the one side, and the oldest form and meaning on the other. If any intermediate forms and significations are given, so much the better; indeed, at times they are necessities rather than superfluities. With a little latitude small differences of dialect are overlooked. Nevertheless, even an old Northumbrian form for a recent West-country word gives a slight, though unimportant, deflection from the true direct pedigree, and approaches a collateral one. This applies to the Anglo-Saxon part of our language; and higher than the Anglo-Saxon and the Old-Saxon, *in the direct line*, Englishmen cannot go. That the Mæso-Gothic would give us older forms is true, but descent from the Mæso-Gothic is collateral rather than direct. When the word is of French origin we can go further, generally up to the Latin, but there we stop. Parallelisms with the Latin, even when they are drawn from so near a congener as the Greek, are collateral, and much more so those from the Slavonic, Lithuanic, and Sanskrit.

**Relations
of the Lite-
rary Eng-
lish to the
Literary
Anglo-
Saxon.**

Closely akin to the preceding is the question of the relations of the literary, or dictionary English, to the Anglo-Saxon; and this falls into two divisions. First, there is its relation to the Anglo-Saxon under the category of New and Old, Modern and Ancient; and, secondly, there is its relation as West-Saxon, Mercian, or Northumbrian, in the way of dialect.

1. Using the common, though by no means unexceptionable terms, Synthetic as denoting a language in the condition of the Latin and Greek, and Analytic as denoting one in the condition of the Italian, we must remember that both Analysis and Synthesis are mere matters of degree. So far as it has a possessive case and a preterite tense, the English of the present moment is Synthetic. So far as the Anglo-Saxon agreed with the English rather than the Greek and Latin, it was Analytic; indeed as compared with the classical, most languages are Analytic. Without either a middle or a passive voice, with a minimum of moods, with no true future tense, with all the cases except the Genitives (in *-es*) and the Datives (in *-um*) but indistinctly marked, the Anglo-Saxon is an inflectional language only when compared with the modern English. The personal endings of the plural are lost in the English Verb, but it is only the loss of a single form, for in Anglo-Saxon all three ended alike. In the so-called Weak Conjugation almost all the cases had the single ending *-an*. The declension of the Participles was nearly that of the Adjectives, the declension of the Adjectives that of the Substantives. I submit that, if details of this kind are underrated, the generalities suggested by the comparison of the Italian with the Latin may mislead.

Nevertheless, though the Anglo-Saxon lost, comparatively, but few inflections, having comparatively but few to lose, the contrast between it and its descendant, even in the matter of inflexion, is important, and this not because many signs of case and gender were lost, but because the loss was spread over a great portion of the language. The present Adjective has nothing but the Degrees of Comparison; the Anglo-Saxon had not only its Genders like the Substantive (and that in all its degrees), but it had one declension when preceded by the Definite Article, and one when Indefinite. The Definite Article, too, now reduced to *the*, had its inflexions, and so, as aforesaid, had the Participles; and as the Article is a word which is always presenting itself, its denudation, so to say, is a very conspicuous character. The inflections, then, though few, were lost over a large space.

**In the way
of Dialect.**

2. Is the present Literary English the descendant of the old literary Anglo-Saxon, or the descendant of some Anglo-Saxon dialect which was, comparatively speaking, uncultivated? The literary dialect of the times before the Conquest was the West-Saxon; in a less degree the Northumbrian; in a still less degree the Mercian; and, probably, in the least degree, the East-

Anglian. Of the dialects of the present time, the one which has the best right to be called the lineal descendant of the West-Saxon is that of Dorsetshire; its claim being suggested both by the history of the classical Anglo-Saxon literature, and by the present structure of the provincial form of speech. No towns show themselves in greater prominence under the Heptarchy than Sherbourne and Malmsbury. To these, if we take in the eastern parts of Somersetshire, Glastonbury may be added; Glastonbury, the residence of the influential St. Dunstan. That Wantage, in Berkshire, was the birthplace of Alfred, and that so important a collection of Anglo-Saxon poems as that contained in the Codex Exoniensis belongs bibliographically to Devonshire, is all that can be set up in favour of any other district. In Berks and Devon, however, the dialect is fundamentally that of Dorset, so that it is only in minute criticism that the difference is indicated. That there were late remnants of the British nation in Dorsetshire is an express opinion of the best writers on the Dorset dialect, and the best investigators of the county antiquities; but that there were more of them in Somerset, and more still in Devon, is the opinion of similar enquirers; the presumption being decidedly in favour of such having been the case. If more Anglo-Saxonisms are at present retained in the more western districts, their presence must be attributed to their greater distance from the present centres of the Literary English of our own times. When the Dorset dialect wants them, it is not because they were missing at the beginning, but because it has lost them since.

We are brought closer to the origin of our present literary language, by the elimination of the West Saxon, the great representative dialect of the Anglo-Saxon, from the field of provincial or sectional competitors for the honour of being the mother-tongue of the English of our present great writers, and their immediate forefathers, from Dryden downwards; and closer still by the elimination of the Northumbrian. Hence no dialect looks more like the Literary English of the nineteenth century, if the Literary English of the nineteenth century be not lineally descended from the dialects of the West-Saxon rather than that of the Mercian territory. Though Devonshire has a few more Anglo-Saxon forms, it has some which are less Anglo-Saxon than Keltic. To Somersetshire this applies less closely; indeed it is only in the way of minutiae that Somerset is separated from Dorset; the object of the present remarks being to prefer Dorset and Somerset to Berkshire and Devon, indeed to make Sherbourne, Malmsbury, and Glastonbury, the Florence of Wessex, rather than Wantage, Winchester, or Exeter. But now let us look to the capital. Whatever may be the present, whatever may have been the early importance, of London, we must train ourselves to consider it as what it was at first—a town or borough of Middlesex; and, as such, subordinate our view of its characteristics in the way of speech to those of the small district to which it belonged. What was the original nucleus? what the dialect of Middlesex? It, doubtless, was that of Essex with its East-Anglian affinities (not over strong), rather than that of Kent. It was, probably, that of Essex, rather than that of Surrey. Nor have the traces of the dissimilarity wholly disappeared. So far as London represents Middlesex, it agrees with Essex; especially on its eastern side. But, as towns separate themselves from the rural villages around them, the London form of speech took in two fresh elements; elements which represent the concourse of a multitude rather than the representation of local provincality. One of these is got from the vulgar; and beginning with a heterogeneous mass of peculiarities, passes into the region of vulgarity, cockneyism, or slang. Another, connected with literature and education rather than individual peculiarities, is invested with a character of culture and generality, and exalts itself into the authority of a literary, a classical, a standard, form of speech. In this the Literary English is held by the writer to have had its germ; and this, other things being equal, spread most easily over the district where the original dialects most closely agreed. This seems to have been in a north-western direction. Hence, the English of Mercia lent itself to the English of the capital more readily than the English of Wessex. It is only in calling the Literary English of the present time the English of London, rather than that of Northampton, of Leicester, or of Oxford, or of any particular place in any particular county, that I unwillingly differ from many of my influential cotemporaries; to whom belongs the merit of correcting the loose notion that because the English followed the Anglo-Saxon, and because the great literary dialect in

Derivation.

Anglo-Saxon was that of Wessex, it was the West-Saxon upon which our literary language was to be affiliated. To those who disparage the merit of having done this, and fancy that a very slight amount of critical acumen was needed for the exploit, the story of Columbus and his egg may be applied. We all know it now; and if, instead of talking of the Anglo-Saxon, the earlier scholars had talked of the dialect of Wessex, or the West Saxon, all might have been easy. But as long as so general a term as Anglo-Saxon was in exclusive use, and as long as the term English was limited, as it practically was, to the English of literature, there was a tendency to look to the succession in time only; that of place being kept in the background.

Catachresis.

This is the place for explaining the meaning of the words *Catachresis* and *Catachrestically*; words frequently used. At first sight they seem pedantic. *Catachresis*, however, is a term to which I give a more definite and precise meaning than is generally given to it. Except in works on Rhetoric, the word is by no means a common one; in these, however, it is generally explained to mean *abuse*, so that a word used *catachrestically* is a word used *abusively*, this latter term having a special import. Such expressions as a *wooden milestone*, a *brass candlestick*, and the like, are the ordinary examples of it; and, in Rhetoric, they may pass without any exception being taken to them. In Grammar, however, and in Lexicography, it is convenient to restrict the word to abusive *forms*; and of these there are more than enough in even the literary language of the best writers, who, of course, take the word as they find it, and use it sometimes consciously, sometimes unconsciously. In most cases, though not in all, it is too late to rectify the errors thus created; in other words, the original mistake has made itself good, and must be accepted as it is delivered to us by general practice.

In the following pages, it means in the first instance a false form; but all false forms are not necessarily catachrestic, indeed the majority is not so. In order to give a genuine catachresis, there must be not only an original error in language, but an error that is adopted, and held to be no error at all. Nor is this all. It must simulate a true formation: in other words, it must follow an analogy, though a wrong one. The examples of it fall into two classes; one containing errors in the way of inflection, the other errors affecting the simple word. I will give some of the more notable examples of each.

It is not uncommon to hear of 'the land being *overflown* with water;' where it is evident, since *overflowed* is the right word, that the analogy of the words *fly* and *flown* has misled the speaker, who in this case, it is to be hoped, has few followers. This, however, is a catachresis that is only germinating, being by no means general with even indifferent writers, and nonexistent with good ones. Still, though it exists, it has a chance of being corrected. Hence, it has not taken firm root in our language. It serves, however, to show that one word, at least, is in danger.

At the opposite extreme are the words *became* and *did*; the first in such expressions as 'The dress you wore yesterday *became* you,' the second in such as 'It *did* well enough for what I wanted it.' Theoretically, these are samples of bad language, very bad; of language which, when it first took its present form, was quite as bad as *overflown* for *overflowed*. There is no connection between the words *become* as the translation of the Latin *fio*, and *become* as the translation of the Latin *convenio*, meaning *suit*. The first is a compound of *be* and *come*, meaning *venio*; the second is from a word which in Anglo-Saxon was *becweman*. It is the congener of the German *bequem*=suitable. That the two words may have a common origin, I neither affirm nor deny. I only state that the true preterite of the first is *became*, and that the true preterite of the second is *becomed*. Yet who can use this latter word? The analogy that has identified the two forms has done its work irrevocably. Yet it is false analogy for all that.

The same applies to *do* and *did*. The *do* which translates the Latin *facio* is the German *thun*, of which the preterite is *that*=*did*. The *do* which translates the Latin *valeo* is the German *taugen*, of which the preterite is *taugede*. In Danish, too, it is *dugé* and *dugede*, pronounced *due* and *duede*. Yet who could say 'It *dooed* well enough?' The wrong analogy is again all-powerful.

The last example I give of the words belonging to this class, the smaller of the two, is the worst spelt word in the English language—the word *could*. The more we go into its history the more we become convinced that the *l* has no place in it. It is no part of the Present form *can*; it is found

in none of the allied languages, the German being *kann*, the Danish *kan*. It occurs in none of the other tenses, and in none of the Participles in any language except our own. The Anglo-Saxon preterite was *cūpe*, and the Scotch (for the *l* is found in only one division of the English language) is *coud*. Yet it exists, and its origin is as transparently clear as its existence. The patent and plausible analogy of the *l* in *would* and *should*, where it represents the *ll* in *will* and *shall* has misled us. •

Catachresis.

The forms in *-ing* are to a great degree catachrestic, and in the fact of their being so lies a large part of the justification of the term Verbal Abstract. It is not denied that every Verbal Abstract is a Substantive, and that the creation of new terms unnecessarily is an evil. Why should the familiar word Substantive be ignored? Why should a great, natural, and generally recognized class be broken up? To this I answer, that it is *not* on the notion that Verbal Abstracts are other than Substantival that the new term is resorted to. The reason lies in the ambiguous character of the forms to which it applies. In this ambiguity lies the fundamental characteristic of the class. As mere abstracts, i.e. as words simply indicating an action, the ordinary Verbals in *-er* are just as good as the words in *-ing*. In each case an action is denoted. In each case the sense is suggested by the verb *hunt*; the only difference being, that whereas *-ing* gives the act purely and simply, *-er* connects it with the doer or actor of it—the agent. In words like *hunter*, however, there is no ambiguity. There is no other Part of Speech with which words like *hunter* can be confounded. Of course this test is, to a great extent, artificial; or, rather, the need of applying it is accidental. It is not a fact of language in general. It is simply an accident of the English Language; and, as such, a piece of English, rather than general, grammar.

Forms in
'ing' cata-
chrestic.

IV. The portion of his Dictionary upon which Johnson himself most especially expected (perhaps invited) criticism, and that of a hostile kind, was the Explanations. Nor was this unnatural. They constituted the part that, after the general framework and design, was the part that was most truly his own. To arrange words in Alphabetical order, to note their places in Grammar, and to give examples of their older forms and meanings, were matters in which care and circumspection, caution and judgement, were nearly all that was wanted. To explain and define required more thought and involved a higher responsibility. Herein it is clear lay the work which alone marked the difference between a master and a sciolist. Perhaps Johnson overrated its difficulties; perhaps he fixed his standard of excellence too high; perhaps he had found that in this division of his subject the labour of thought had been the greatest, and the difficulties of expression the most discouraging. Nevertheless, his forebodings have not been made good. It is chiefly upon the merits of his Explanation that his present reputation rests. And that deservedly. Acute in drawing distinctions, and sagacious in divining the leading significations of words, he has left less to be done in this department than in any other; or, at least, he has left the Explanatory department in a condition which his successors have been but little inclined to alter:

IV. EX-
PLANA-
TION AND
DEFINI-
TION.

— sudet multum, frustra que laboret,
Ausus idem.

Something in this matter may, perhaps, be due to the simple fact of his authority. In many cases his explanation, like a prophecy which fulfils its own accomplishment, has verified itself; and words have been used in certain senses, not because they were so used by the earlier writers, but because Johnson has so laid down their import. Upon the whole, however, he wrote upon language as one who helped to make it—boldly and freely.

And here I may remark that, though most of those who, at the present time, treat of Dictionaries, use the word *Definition* rather than *Explanation*, it is the latter, and not the former, which is Johnson's word. That he wholly eschews the former is more than can be said with truth. *Explanation*, however, is his word, and it was probably chosen deliberately. It is certainly the more general term; since more than half the words of our language are incapable of being defined. It was certainly the more practical term. The strictly logical definition by Genus and Species, even when applicable, is but ill adapted for conveying information respecting new words: though well

Explanation. suited for removing ambiguity from familiar ones; whilst the Definition which runs out into the length of a description, though admirably fitted for instruction, is impracticable in a work which deals with words by the thousand.

By improving, when practicable, the comparatively easy and unscientific Explanation into the rigorous and scientific Definition, many have thought that lexicography may be improved. I doubt, however, whether such be the case. It is no paradox, but a simple truth, to assert that strict logical definitions have scarcely a place in the language of every day life, and of general literature. Herein nine words out of ten have a floating rather than a fixed meaning; and with this they serve their purpose of a medium of communication in matters wherein extraordinary nicety is not required. It is only when applied to special investigations and discussions that they want fixing; and then the Definition may be but temporary. What are called Questions of Definition, Questions as to the Meaning of a Term, Verbal Questions, as opposed to Real ones, show this. They would not exist if the language of ordinary life was not, to some extent, indefinite; and, when the special question for which they were shaped into definitude is over, they return to their ordinary state. There are numerous exceptions to this; upon the whole, however, Definitions, in the strict sense of the term, are not the best kind of explanation for a Dictionary.

Perhaps the best notion of the meaning of a word is to be got by dividing the elements of its illustration; in other words, by improving an approximate Definition by an illustrative example, and the illustrated example by the approximate Definition or the Explanation properly so called. In this case the explanation and example are complementary to one another. To these add the Derivation, and, I believe, that few words will be found of the meaning of which the reader will not obtain an adequate conception. That it is neither rigidly scientific, nor laudably philosophic, may be granted. On the other hand, however, it is submitted that it may be something better. It may be *Natural*. Let anyone who has ever explained to an enquirer of ordinary intelligence the meaning of a new word analyze the process, and he will find that in most cases two out of the three means of illustration under notice are resorted to. An Explanation is extemporized, which is probably somewhat loose. An Example, perhaps, or extemporized sentence, improves it. And both may be improved by the Derivation; the value of this last element depending upon the nature of the word.

V. QUOTATIONS.

V. It has generally and justly been held, that in his *Extracts, Examples, or Quotations*, Johnson was singularly fortunate. One of the merits commonly attributed to his book is, that it may be taken up anywhere and found both amusing and instructive. It is possible that much the same might be said of any work that gave an extract under every, or nearly every, entry. Upon the value of the Example, *as such*, enough has perhaps been said. It helps and improves the explanation. It is complementary to it. Between the two an adequate practical exposition of the meaning of the word is conveyed. As to the Quotations themselves, I am not afraid of competition; a statement which may be made with but little fear of the charge of presumption. A later writer who has the authors of an additional century to choose from, has an advantage over his predecessor which it would be affectation to ignore. The question, however, of examples is largely mixed up with that of entries. Many of the more recent Quotations of the present work are new because they deal with new words.

Sometimes when a Quotation, by running to an inconvenient length, requires to be abridged, and a part from the middle is omitted, a short row of dots is inserted in place of the words dispensed with. Without some sign of this kind, the style of many an author would be greatly disguised, and to some scant justice would be done. To take the middle out of a sonorous and carefully constructed sentence is to make the author of it appear to write much more elliptically than he really does.

Again: sometimes a word is repeated by the same writer within the space of a few sentences. By omitting a part of the intervening text, which may often be done without impairing the sense, we multiply our examples and economize our space.

In one class of words not only is this system of omission necessarily carried to a great length, but the modification of it, unless considerable injustice be done to the author, is imperative.

Few passages of an etymological kind can be given in full. Some of them, indeed, extend over several pages. Yet the subject is preeminently a speculative one; and one which, as such, should be given, if practicable, in the very words of the propounder. When the view is original, and, still more, when it is one to which the Editor who quotes it either takes or suggests an exception, the propriety of letting it stand in as full a form as possible is evident. Yet space frequently forbids more than a certain amount of illustration. Hence, as a general rule, the doctrines of Mr. Wedgwood and others are better supported than from the extract they may appear to be.

That the principle of illustrating the meaning of each word by extracts is carried to a greater length in the present Dictionary than in any preceding one is evident; and it is hoped that this is a favourable characteristic of the work. It is one by which the reader is the gainer; inasmuch as it enables him in many cases to criticize the Editor by a simple comparison of the illustration with the entry. At the same time there are a few points in which complete correspondence is not to be expected. In the matter of accentuation it often happens that the word quoted, if the extract be from a poet, has one sound in the entry, another in the extract. The same applies to certain cases of orthography. Whatever spelling the Editor may himself adopt, that of the author from whom the Quotation is taken is always followed in the extract; or, at least, that of the edition from which he is quoted. An occasional want of correspondence is the result; indeed, in some instances, the extracts may give more ways of spelling than one. This discrepancy, however, is by no means peculiar to the present edition: for it occurs in all that have preceded it. In some cases, therefore, the reader may prefer the authority of the writer quoted to that of the Editor; and, though it is hoped that these will not be numerous, it is necessary to remind him that, in every word, he has really a check of this kind before him.

Upon the whole, however, the extracts are not given to illustrate either the spelling or the pronunciation: though, to some extent, they illustrate both. Their primary object is to supply a context by which the *meaning* of the word, which has partly been suggested by the Derivation and partly supplied by the Definition, may be more distinctly explained. This has already been stated; I believe with truth. Nevertheless, when I consider the difficulty of combining the close thought required for the elaboration of a self-sufficient definition with the labour involved in the search for words and examples, not to mention the other minute details of a large lexicon, I cannot but own that it is a convenient one. I have acted, however, upon it, on its own merits; in many cases trusting for the explanation of a word to the extract rather than the notice that precedes it.

It is upon this principle of distribution that so little attention is paid to doubtful derivations. If the main object of the etymon of a word be the explanation of its meaning, it is manifest that the only useful derivations are the certain ones. It is upon this principle, too, of distribution that valuable Dictionaries in America have been illustrated by plates—an innovation which goes far towards turning a Dictionary into an Encyclopedia. Without expressing an opinion as to the desirability of such a change, I cannot overlook the tendencies towards such a consummation.

ANGLO-SAXON LETTERS.

þ þ = Th in *thin*—capital and small.
 ð ð = Th in *thine*—capital and small.

3 This is, in form, precisely the Anglo-Saxon *ȝ*=*g*. It was used long after the other letters were obsolete; and its sound probably varied with the district. Though always a sound akin to that of the *g* in *gone*, it was, probably, not always the same sound. In the North it seems to have been the *gh*, or guttural *g*, as it is now sounded in Craven. In the Midland Counties it may have been *gy*; *garden* being sounded *gyarden*. In some few instances it may have been the sound which stands in the same relation to *g* as *v* to *b*, *ð* to *t*, and the *s* in *asure* to the *z* in *zany*; a rare sound, and by no means the guttural *gh*. In many printed works it is represented by

z; so that *young* is *zong*, or *zoung*. This is an error arising solely out of the likeness of the letters, or signs, by which the sound is represented. It oftenest coincides with *gh*, as in *knight*, or with *y*; especially, in this last case, when at the beginning of a word. It may be treated as *g*.

The mark over *á* and *ú* in words like *stán* and *búr*, in Anglo-Saxon, is certainly not an accent indicating stress or emphasis (since the preceding words, like many others, give it in monosyllables), but an orthoepical sign. *á* corresponds to the English *aw* (as in *baul*), and *ú* to *ow* (as in *howl*); and, as far as we can judge of a language spoken nine hundred years ago, they were so sounded.

I did not believe her, and I was *abashed* at her.—*Tobit*, ii. 13, 14.

With of. *Obsolete*.

Be *abashed* of the error of thy ignorance.—*Eccl. i. 11*.

[*Abash* is an adoption of the Fr. *esbahir*, as sounded in the greater number of the inflections, *esbahissons*, *esbahissais*, *esbahissant*. In order to convert the word thus inflected into English it was natural to curtail merely the terminations *ons*, *ais*, *ant*, by which the inflections differed from each other, and the verb was written in English to *abaisse* or *abash*, as *ravish*, *polish*, *furnish*, from *ravir*, *polir*, *fournir*.

Many English verbs of a similar derivation were formerly written indifferently with or without a final *sh*, where custom has rendered one or other of the two modes of spelling obsolete. Thus *obey* was

written obeisse or obeyshe; betray, betrash.—*Wedge-wood, Dictionary of English Etymology.*

Abashing. verbal abs. Putting to shame.

Abate. v. a. [N.Fr. *abattre* = beat down.]

1. Beat down; lower, weaken; depress, hum-
ble; lessen.

This iron world
Brings down the stoutest hearts to lowest state:
For misery doth bravest minds abate.
Spenser, Mother Hubbard's Tale.

Time that changes all, yet changes us in vain,
The body, not the mind; nor can controul
Th' immortal vigour, or abate the soul.
Dryden, Virgil's Æneid.

Who can tell whether the divine wisdom, to abate
the glory of those kings, did not reserve this work
to be done by a queen, that it might appear to be
his own immediate work?—*Sir J. Davies, On Ire-*
land.

If you did know to whom I gave the ring,
And how unwillingly I left the ring,
You would abate the strength of your displeasure.
Shakespeare, Merchant of Venice, v. 1.

It may, however be thought that these several
facts are to be explained by the circumstance that
the rulers of the English Church had not yet come
to a rupture with the great bulk of those who had
preferred the ancient worship, and that they were
content to abate something of the breadth of their
own reforming principles purely for the sake of con-
ciliation.—*Gladstone, The State in its Relations to*
the Church, ch. vii.

2. In *Law*. To abate a nuisance is to re-
move or lessen one. To abate a writ is, by
some exception, to defeat or overthrow it.
(The verb in its legal sense is both *neuter*
and *active*, as may be seen in *Abate*,
n. n. 2.)

Abate. v. n.

1. Become lower, less, or weaker; or dimi-
nished in degree.

As day advanced the weather seem'd to abate.
Byron, Don Juan, ii. 30.

With of.
Our physicians have observed, that in process of
time, some diseases have abated of their virulence,
and have, in a manner, worn out their malignity, so
as to be no longer mortal.—*Dryden, Preface to*
Hind and Panther.

2. In *Law*.

A stranger *abateth*, that is, entereth upon a house
or land void by the death of him that last possessed
it, before the heir take his possession, and so keepeth
him out. Wherefore, as he that putteth out him in
possession, is said to disseise: so he that steppeth in
between the former possessor and his heir, is said to
abate: In the neuter signification thus: the writ of
the demandant shall *abate*, that is, shall be dis-
abled, frustrated, or overthrown. The appeal *abateth*
by covin, that is, that the accusation is defeated by
deceit.—*Cowell, Law Dictionary.*

A year and a day must elapse ere the right *abated*
from the 'lord in pursuit,' for so was the lord called
over all Europe in the idioms of the several tongues,
and hence it cannot have been a very easy matter
for any man to take advantage of the poor-law,
while it remained any one's advantage to keep him
from falling into the state of pauperism; in other
words, no man whose labour still possessed any value
would be so cast upon the world as to have no refuge
but what the church in christian charity provided.—
Kemble, Saxons in England, b. ii. ch. x.

Abatement. s.

1. Diminution, deduction, extenuation.
Xenophon tells us, that the city contained about

ABBE

ten thousand houses, and allowing one man to every
house, who could have any share in the government
(the rest consisting of women, children, and ser-
vants), and making other obvious abatements, these
tyrants, if they had been careful to adhere together,
might have been a majority even of the people
collective.—*Swift, On the Contest in Athens and*
Rome.

Coffee has, in common with all nuts, an oil strongly
combined and entangled with earthy particles. The
most noxious part of oil exhales in roasting to the
abatement of near one quarter of its weight.—
Arbuthnot, On the Nature and Choice of Aliments.

The law of works is that law, which requires per-
fect obedience, without remission or abatement; so
that, by that law, a man cannot be just, or justi-
fied, without an exact performance of every title.—
Locke.

We cannot plead in abatement of our guilt, that
we were ignorant of our duty.—*Bishop Atterbury,*
Sermons.

It would be impossible, and not very useful, to de-
termine the precise abatement that must be made
from the poetic and rhetorical panegyrics that have
celebrated its fame, before they can be reconciled
with the sober language of historical truth.—*Bishop*
Thirlwall, History of Greece, ch. xiv.

2. In *Heraldry*. Mark, by the addition of
which to a coat of arms its dignity is
abased.

Throwing down the stars (the nobles and sena-
tors) to the ground; putting dishonourable abate-
ments into the fairest coats of arms.—*Dr. Spenser,*
Righteous Ruler.

Abater. s. One who abates.

Abaters of acrimony or sharpness, are expressed
oils of ripe vegetables, and all preparations of such:
as of almonds, pistachoes, and other nuts.—*Arbuth-*
not, On the Nature and Choice of Aliments.

Abatis. s. [Fr.] Fence, for military pur-
poses, made of stakes and felled trees.

Such also among the Slavonians were the vici, en-
circled by an *abatis* of timber, or at most a paling,
and proper to repel not only an unexpected attack,
but even capable of resisting for a time the onset of
practised forces; such in our time have been found
the stockades of the Burmese, and the pah of the New
Zealanders, and if our skillful engineers have ex-
perienced no contemptible resistance, and the lives of
many brave and disciplined men have been sacrific-
ed in their reduction, we may admit that even the
oppida of Cassivelaunus, or Caratac, or Gaiacacus,
might, as fortresses, have serious claims to the at-
tention of a Roman commander.—*Kemble, Saxons*
in England, b. ii. ch. vii.

Yet there was a tradition on the subject, probably
of some antiquity, which appears to have assumed
various forms, one of which was adopted by Nepos,
who relates that Miltiades protected his flanks from
the enemy's cavalry by an *abatis*: a fact which it
may be thought Herodotus could scarcely have passed
over in silence, if it had been known to him.—*Bishop*
Thirlwall, History of Greece, ch. xiv.

Abawe. v. a. Dazzle. [see under *Awe*.]
Obsolete.

I saw the rose when I was nigh,
It was thereon a goodly sight—
For such another, as I gesse,
Aforne ne was nor more vermeille,
I was abawed for merveille.
Chaucer, Romaunt of the Rose, 3645.

The original being:
Moult me bahis de la merveille. (Wedg.)

Abbacy. s. [Lat. *abbatia*.] Rights and office
of an abbot.

According to Felinus, an *abbacy* is the dignity it-
self, since an abbot is a term or word of dignity, and
not of office.—*Ayliffe, Parergon Juris Canonici.*

The temporal power throughout declared that it
did not bestow, or if it sold for any stipulated gift
or service the benefice attached to the see, the *ab-*
bacy, or the prebend, it did not presume to sell the
spiritual function, but only the property of the en-
dowment. The sovereign was the liege lord, not of
the bishop or the abbot in his hierarchical, but
solely in his feudal rank.—*Milman, History of Latin*
Christianity, b. vii.

Abbátial. adj. Relating to an abbey.
Rare.

Abbátial government was probably much more
favourable to national prosperity than baronial
authority.—*Sir F. Eden, State of the Poor, p. 50.*

Abbé. s. French for *abbot*: (applied also in
France to a class of persons under the old
regime, who, having entered on the first
orders of the church, became men of letters,
tutors, &c.)

Ere long some bowing, smirking, smart *abbé*
Remarks two loit'ers that have lost their way.
Cowper, Progress of Error, l. 384.

He [Lord Mahon] is so bigoted a purist that he
transforms the *Abbé d'Estrees* into an Abbot. We
do not like to see French words introduced into

ABDI

English composition; but, after all, the first law of
writing, that law to which all other laws are sub-
ordinate, is this, that the words employed shall be
such as convey to the reader the meaning of the
writer. Now an Abbot is the head of a religious
house; an *Abbé* is quite a different sort of person.
It is better undoubtedly to use an English word than
a French word; but it is better to use a French
word than to misuse an English word.—*Macaulay,*
Essays, Lord Mahon's War of the Spanish Suc-
cession.

Abdess. s. [Lat. *abbatissa*; whence A.S.
abbulisse, by contraction *abbesse*.] Su-
perior of an abbey, when a female.

lishment, presided over by either an abbot
or abbess.

The clergy trembled for their benefices, the landed
gentry for their *abbeyes* and great tithes.—*Macaulay*

Abbot. s. [L. Lat. *abbas* = father.] Super-
rior of an abbey, when a male.

At length with easy roads he came to Leicester.
Lodg'd in the abbey, where the reverend *abbot*,
With all his convent, honourably receiv'd him.
Shakespeare, Henry VIII. iv. 1.

There was no longer an *Abbot* of Glastonbury or
an *Abbot* of Reading seated among the peers, and
possessed of revenues equal to those of a powerful
Earl.—*Macaulay, History of England, ch. iii.*

Abbreviate. v. a. [L. Lat. *abbreviatus*,

other by cutting off.—*Bacon, Essays, 26.*

Abbreviate. s. That which abbreviates.

English, p. 4.

Abbreviation. s.

1. Act of abbreviating; shortening.

the same foundation: and the self-same arguments
either confirm them, or overthrow them, both to-
gether.—*Smith, Portrait of Old Age, p. 261.*

2. Compendium or abridgement.

Such is the propriety and energy in them all, that
they can never be changed, but to disadvantage, ex-
cept in the circumstance of our using *abbreviations*.
—*Swift.*

Abbreviator. s. One who abbreviates.

But if, compared only with the older logicians,
the assertion of Dr. Hinds is found untenable, what
will it be found, if we compare Whately with the
logicians of the Kantian and Leibnitian school, of
whose writings neither the Archbishop, nor his *ab-*
breviator, seems ever to have heard.—*Sir W.*
Hamilton, Lectures, Logic, lect. ii.

Abbreviature. s. Same as *Abbreviation*.
Obsolete.

He is a good man, who grieves rather for him that
injuries him, than for his own suffering; who prays
for him that wrongs him, forgiving all his faults;
who sooner shews mercy than anger; who offers
violence to his appetite, in all things endeavouring
to subdue the flesh to the spirit. This is an excel-
lent *abbreviature* of the whole duty of a Christian.—
Jeremy Taylor, Guide to Devotion.

The hand of Providence writes often by *abbrevia-*
tures, hieroglyphics, or short characters.—*Sir T.*
Browne, Christian Morals, § 25.

A, B, C. s. Alphabet.

He [Charles II.] was utterly without ambition. He detested business, and would sooner have abdicated his crown than have undergone the trouble of really directing the administration.—*Macaulay, History of England, ch. i.*

c. A bishopric or cardinalate.

Heros and Lazarus, the Gallic bishops, were denounced in the strongest terms to the African Council as vagabond, turbulent, and intriguing prelates, who had either abdicated or abandoned their sees, and travelled about sowing strife and calumny wherever they went.—*Milman, History of Latin Christianity, b. ii. ch. ii.*

He had been invested by the same gentle violence in the rank of a Cardinal; and in that character had wrought his temporary triumph in Milan. Already had he addressed an earnest argument to Pope Nicolas II., to be allowed to abdicate the weary, unthankful, unmonastic office. Damiani saw the monk, in all but its personal austerity, departing from the character of Hildebrand.—*Milman, History of Latin Christianity, b. vii. ch. i.*

When Gregory VI., compelled to abdicate the Papacy, retired into Germany, he was followed by Hildebrand; on Gregory's death Hildebrand returned for a short time to his beloved retreat at Clugny.—*Milman, History of Latin Christianity, b. vii. ch. i.*

2. Dethrone, disgrace, deprive of office or right. Obsolete.

The Turks abdicated Cornutus, the next heir, from the empire, because he was so much given to his book.—*Burton, Anatomy of Melancholy, To the Reader.*

Abdication. s. Act of abdicating an office.

Neither doth it appear how a prince's abdication can make any other sort of vacancy in the throne, than would be caused by his death; since he cannot abdicate for his children, otherwise than by his own consent in form to a bill from the two houses.—*Swift, On the Sentiments of a Church of England Man.*

On the other hand, we fully admit that, if the Long Parliament had pronounced the departure of Charles from London an abdication, and had called Essex or Northumberland to the throne, the new prince might have safely been suffered to reign without such restrictions.—*Macaulay, Essays, Hallam's Constitutional History.*

Abdomen. s. [Lat.] Belly.

The *abdomen* may be considered as the fundamental part of the frame, inasmuch as it is never wanting in monstrous fetuses; and as it contains parts which are the first formed in the embryo, and are the centres and sources of organic life.—*Copland, Dictionary of Practical Medicine.*

Abdominal. adj. Constituted by, or appertaining to, the abdomen.

A vegetative sameness of form prevails in fishes throughout the vertebral column of the trunk, which is made up of only two kinds of vertebrae, characterised by the direction of the parapophyses: these in the *abdominal* region are lateral, usually stand out, and support ribs; but in the caudal region they bend down and coalesce at their extremities.—*Owen, Lectures on Comparative Anatomy, lect. iii. p. 62.*

This has been shewn distinctly by Emmert in regard to the hydrocyanic acid; which, when introduced into the hind leg of an animal after the *abdominal* aorta has been tied, produces no effect till the ligature be removed, but then acts with rapidity.—*Christison, Treatise on Poisons, pt. i. ch. i. sect. 1.*

Abduce. v. a. [Lat. *abduco*.] Draw from one point to, or towards, another. *Obsolete, rare.*

If we *abduce* the eye unto either corner, the object will not duplicate; for, in that position, the axis of the cones remain in the same plain, as is demonstrated in the optics delivered by Galen.—*Sir T. Browne, Vulgar Errors, iii. 20.*

Abduct. v. a. Take away privily and forcibly.

One must needs vote, for the thing is self-evident, that his majesty has been *abducted*, or spirited away, 'enlevé,' by some person or persons unknown: in which case, what will the constitution have us do?—*Carlyle, French Revolution, pt. ii. b. iv. ch. iv.*

Adduction. s.

Divers were out in their account, *aberring* several ways from the true and just compute, and calling that one year, which perhaps might be another.—*Sir T. Browne, Vulgar Errors, iv. 12.*

Aberrance. s. See *Aberration*.

Could a man be composed to such an advantage of constitution, that it should not at all adulterate the images of his mind; yet this second nature would alter the crisis of his understanding, and render it as obnoxious to *aberrances*, as now.—*Glanville, Scep sis Scientifica, ch. xvi.*

Aberrancy. s. Same as *Aberrance*. *Obsolete.*

They do not only swarm with errors, but vices depending thereon. Thus they commonly affect no man any further than he deserts his reason, or complies with their *aberrancies*.—*Sir T. Browne, Vulgar Errors, i. 3.*

Aberrant. adj. Chiefly used in *Biology*. Departing from a type or standard.

The more *aberrant* any form is, the greater must have been the number of connecting forms, which, on my theory, have been exterminated or utterly lost. And we have some evidence of *aberrant* forms having suffered severely from extinction, for they are generally represented by extremely few species. The genera *Ornithorhynchus* and *Lepidosiren*, for instance, would not have been less *aberrant* had they been represented by a dozen species instead of a single one.—*Darwin, Origin of Species, ch. xiii.*

Aberration. s.

1. Act of swerving; deviation.

If it be a mistake, there is no heresy in such an harmless *aberration*; the probability of it will render it a lapse of easy pardon.—*Glanville, Scep sis Scientifica, ch. xi.*

The combination of these conditions is so various, the changes amongst them often so rapid, as to every degree of such mental *aberration*, as well as the diversity of forms under which they occur: from the simple reverie of the absent man, to the wildest incongruities of the maniac.—*Ibid. vi. 114.*

But where the boundaries of sects are well-defined, and their religious convictions deeply rooted; where an active, zealous body of unworshipping clergy exists; where there is no religious indifference, but, on the contrary, a jealous maintenance of the distinctive doctrines of the particular creed, and a sensitive abhorrence of proselytism; where every member is regarded as the property of the congregation, whose defection to another sect is regretted as a common loss, and whose seduction is resented as a common injury—there the endeavours of an endowed clergy to draw the entire people within their fold, however earnest and unremitting, will certainly fail of success.—*Sir G. rance.—*Conference at Hampton Court*, p. 39.

same substance.

in five books, we will essay to *abridge* in one volume.
—*2 Maccabees*, ii. 23.

2. Contract; diminish.

following the direction of that guide; and he that
has a power to act or not to act, according as such
determination directs, is free. Such determination
abridges not that power wherein liberty consists.—

struction of large works, labour is greatly *abridged*.
—*Buckle, History of Civilization*, i. 106.

[Of these synonymous terms, *abridge* and *abbreviate*,
the former, from *Fr. abréger*, seems the older form,
the identity of which with Lat. *abbreviare* not being
at once apparent, *abbreviate* was subsequently
formed direct from the latter language.

Abreger itself, notwithstanding the plausible
quotation from Chaucer . . . is not from *G. ab-
brechen*, AS. *abraccan*, but from Lat. *abbreviare*, by
the change of the *v* and *i* into *u* and *j* respectively.
The Provencal has *dreu* for *brevis*; *breugetat* for
brevisitas, in analogy with which the verb corre-
sponding to *abbreviare* would be *abreuejar*, leading
immediately to *Fr. abréger*; and other cases may be
pointed out of similar change in passing from Lat.
to the Romance languages. Lat. *levis* becomes *lew*
in Prov., while the verb *alleviare* is preserved in the
double form of *alleviar* and *alleviar*, whence the
Fr. alléger, which passed into English under the
form *allege*, common in Chaucer and his contem-
poraries, so that here also we had the double form
allege and *alleviate*, precisely corresponding to
abridge and *abbreviate*. In like manner from Lat.
gravis, Prov. *greu*, heavy, hard, severe; *greugetat*,
gravity, leaving a verb *aggraver* to be supplied
corresponding to *Fr. aggréger*, OE. *agredge*, to
aggravate.—*Wedgwood, Dictionary of English Ety-
mology*.]

3. Deprive of; cut off from: (in which sense
it is followed by *from* or *of*, preceding the
thing taken away).

I have disabled mine estate,
By showing something a more swelling port,
Than my faint means would grant continuance;
Nor do I now make moan to be *abridg'd*
From such a noble rate.

Shakespeare, Merchant of Venice, i. 1.

145.

being as in *I must away* = I must go, or be

3. Want of appearance: (in the legal sense).

Absece is of a fourfold kind or species. The first is a necessary *absece*, as in banished persons; this is entirely necessary. A second, necessary and voluntary; as upon the account of the commonwealth, or in the service of the church. The third kind the civilians call a probable *absece*; as, that of students on the score of study. And the fourth, an *absece* entirely voluntary; as, on the account of trade, merchandize, and the like. Some add a fifth kind of *absece*, which is committed cum dolo et culpa, by a man's non-appearance on a citation; as, in a contumacious person, who, in hatred to his contumacy, is

by the law, in some respects, reputed as a person present.—*Ayliffe, Parergon Juris Canonici*.

4. Inattention, heedlessness, neglect of the present object.

I continued my walk, reflecting on the little *abseces* and distractions of mankind.—*Addison, Spectator, no. 77.*

Absent. adj. [Lat. *absens*, -entis.]

1. Not present.

Where there is advantage to be given,
Both more and less have given him the revolt;
And none serve with him but constrained things,
Whose hearts are *absent* too.

Shakespeare, Macbeth, v. 4.
Whether they were *absent* or present, they were vexed alike.—*Wisdom, xi. 11.*

With from.

In spring the fields, in autumn hills I love;
At morn the plains, at noon the shady grove;
But Delia always: *absent* from her sight,
Nor plains at morn, nor groves at noon delight.
Pope, Pastorals.

2. Absent in mind, inattentive, regardless of the present object.

I distinguish a man that is *absent*, because he thinks of something else, from him that is *absent*, because he thinks of nothing.—*Addison, Spectator, no. 77.*

Absent. s. One who is not present. *Rare.*

Let us enjoy the rite of Christian *absents*, to pray for one another.—*Bishop Morton, To Archbishop Usher, Letters: 1623.*

Absent. r. a. Withdraw; forbear to come into presence.

If thou didst ever hold me in thy heart,
Absent thee from felicity awhile.

Shakespeare, Hamlet, v. 2.
If she were but the body's accident,
And her sole being in it did subsist,
As white as snow, she might herself *absent*,
And in the body's substance not be missed.
Sir J. Davies, Immortality of the Soul, sect. iii.
Tho' I am forc'd to thus to *absent* myself
From all I love, I shall contrive some means,
Some friendly intervals, to visit thee.

Southern, Spartan Dame.
The Arengo is still called together in cases of importance; and if, after due summons, any member *absents* himself, he is to be fined to the value of about a penny English.—*Addison, Travels in Italy.*

Absentation. s. [probably suggested by Presentation, as its opposite.] Absence. *Rare.*

Absenté. s. One who is absent from his station or employment, or country: (commonly applied to Irish landlords living out of their country).

Then was the first statute made against *absentees*, commanding all such as had land in Ireland, to return and reside thereupon.—*Sir J. Davies, State of Ireland.*

A great part of estates in Ireland are owned by *absentees*, and such as draw over the profits raised out of Ireland, refunding nothing.—*Sir J. Child, Discourse on Trade.*

Absenter. s. One who absents himself from his duty. *Rare.*

You have heard what a deficiency there was of the special jury, which was imputed to their backwardness to serve a prosecution against the princess. He [Judge Foster] has fined all the *absenters* 20*l.* a piece.—*Lord Thurlow, in the Life of Sir M. Foster.*

Absentment. s. State of being absent. *Rare.*
All other phrases and circumlocutions by which human death is expressed, either in holy Scripture or in usual language—such, for instance, as these in Scripture, a peregrination, or *absentment* from the body, &c. might easily be shewed to be applicable to the death of our Saviour.—*Barrow, Works, li. 333.*

Absinthian. adj. [Lat. *absinthium* = wormwood.] Partaking of the nature of wormwood. *Rare.*

Best physick then, when gall with sugar meets,
Tempering *absinthian* bitterness with sweets.

Absolute. adj. [Lat. *absolutus*, part. of *absolvere* = free from liability.]

1. Unlimited; unconditional.

Because the things that proceed from him are perfect, without any manner of defect or maim; it cannot be but that the words of his mouth are *absolute*, and lack nothing which they should have, for performance of that thing whereunto they tend.—*Hooker, Ecclesiastical Polity, li. 6.*

2. In Politics. Autocratic: (applied to governments where there are no constitutional checks):

My crown is *absolute*, and holds of none;
I cannot in a base subjection live.
Nor suffer you to take, though I would give.
Dryden, Indian Emperor.

3. Positive; certain; peremptory.

Long is it since I saw him,
But time hath nothing blurr'd those lines of favour
Which then he wore; the snatches in his voice,
And burst of speaking were as his: I'm *absolute*,
'Twas very Cloten. *Shakespeare, Cymbeline*, iv. 2.

4. In *Metaphysics*. Unconditioned.

Fichte had attempted to construct a system of knowledge on the principles of idealism, in respect both of form and matter; but Schelling carried speculation a step farther, and instead of ego, the subject-object, placed at the head of his system the *absolute* itself, and proposed to solve on philosophical principles the highest problem which reason can contemplate—the nature of *absolute* being, and the manner in which all finite beings are derived from it.—*Johnson, Translation of Tennemann's Manual of the History of Philosophy*, § 390.

The philosophy of the conditioned, even from the preceding outline, is, it will be seen, the express converse of the philosophy of the *absolute*—at least, as this system has been latterly evolved in Germany. For this asserts to man a knowledge of the unconditioned, of the *absolute* and infinite; while that denies to him a knowledge of either, and maintains all which we immediately know or can know, to be only the conditioned, the relative, the phenomenal, the finite.—*Sir W. Hamilton, Discussions*, &c., Appendix I.

5. Not relative: (to which word it is opposed).

I see still the distinctions of sovereign and inferior, of *absolute* and relative worship, will bear any man out in the worship of any creature with respect to God, as well at least as it doth in the worship of images.—*Bishop Stillingfleet, Defence of Discourse on Roman Idolatry*.

The fifth leading division of names is into *relative* and *absolute*, or let us rather say, relative and non-relative; for the word *absolute* is put upon much too hard duty in metaphysics, not to be willingly spared when its services can be dispensed with. It resembles the word civil in the language of jurisprudence, which stands for the opposite of criminal, the opposite of ecclesiastical, the opposite of military, the opposite of political, in short the opposite of any positive word which wants a negative.—*J. S. Mill, System of Logic*, i. 2, 7.

In order to frame an Art of thus tabulating all existing sciences, and indeed all possible knowledge, he divides into various classes the conceptions with which he has to deal. The first class contains nine *Absolute* Conceptions: Goodness, Greatness, Duration, Power, Wisdom, Will, Virtue, Truth, Majesty. The second class has nine *Relative* Conceptions: Difference, Identity, Contrariety, Beginning, Middle, End, Majority, Equality, Minority.—*Whewell, History of Scientific Ideas*, p. 60.

Absolutely. *adv.*

1. Without restriction, condition, or limitation.

All the contradictions which grow in those minds, that neither *absolutely* climb the rock of virtue, nor freely sink into the sea of vanity.—*Sir P. Sidney*.

What merit they can build upon having joined with a protestant army, under a king they acknowledge, to defend their own liberties and properties, is, to me, *absolutely* inconceivable; and, I believe, will be equally so for ever.—*Swift*.

Do these two doctrines only differ in the degree of their truth, as expressing real facts with unequal degrees of accuracy? Assuredly the one is true, and the other *absolutely* false.—*J. S. Mill, System of Logic*, p. 309.

2. Without relation.

Absolutely we cannot discommend, we cannot *absolutely* approve, either willingness to live or forwardness to die.—*Hooker*, v.

These then being the perpetual causes of zeal; the greatest good, or the greatest evil: either *absolutely* so in themselves, or relatively so to us; it is therefore good to be zealously affected for the one against the other.—*Bishop Sprat, Sermons*.

No sensible quality, as light, and colour, and heat, and sound, can be subsistent in the bodies themselves, *absolutely* considered, without a relation to our eyes and ears, and other organs of sense. These qualities are only the effects of our sensation, which arise from the different motions, upon our nerves, from objects without, according to their various modifications and positions.—*Bentley, Sermons*.

3. Peremptorily; positively.

Being as I am, why didst not thou Command me *absolutely* not to go?—*Milton, Paradise Lost*, ix. 1155.

And of that nature, for the most part, are things *absolutely* unto all men's salvation necessary, either to be held or denied.—*Hooker, Eccles. Polity*.

Absoluteness. *s.* Abstraction suggested by Absolute. *Rare*.

1. Completeness.

To the second part of the objection, the strength whereof is, that to tie up God in his actions to the

reason of things destroys his liberty, *absoluteness*, and independency; I answer, it is no imperfection for God to be determined to good; it is no bondage, slavery, or contraction, to be bound up to the eternal laws of right and justice.—*Bishop Rust, Discourse of Truth*, p. 189.

This should silence the proud regrets, and murmurings of our hearts, at the *absoluteness* of God's decrees and purposes: for why may not his decree be as *absolute* as his power?—*South, Sermons*, viii. 241.

2. Freedom from dependence or limits.

The *absoluteness* and illimitedness of his commission was generally much spoken of.—*Lord Clarendon*, viii.

There is nothing that can raise a man to that generous *absoluteness* of condition, as neither to cringe, to fawn, or to depend meanly, but that which gives him that happiness within himself, for which men depend upon others.—*South, Sermons*.

3. Despotism.

He kept a strait hand on his nobility, and chose rather to advance clergyemen and lawyers, which were more obsequious to him, but had less interest in the people; which made for his *absoluteness* but not for his safety.—*Bacon, History of the Reign of Henry VII.*

They dress up power with all the splendour and temptation *absoluteness* can add to it.—*Locke*.

Absolution. *s.*

1. Acquittal.

Absolution, in the civil law, imports a full acquittal of a person by some final sentence of law; also, a temporary discharge of his farther attendance upon a merge process, through a failure or defect in pleading: as it does likewise in the canon law, where, and among divines, it likewise signifies a relaxation of him from the obligation of some sentence pronounced either in a court of law, or else in foro penitentiali. Thus there is, in this kind of law, one kind of *absolution*, termed judicial, and another, stiled a declaratory or extrajudicial *absolution*.—*Ayliffe, Parergon Juris Canonici*.

2. Remission of sins, declared by ecclesiastical authority.

The *absolution* pronounced by a priest, whether papist or protestant, is not a certain infallible ground to give the person, so absolved, confidence towards God.—*South, Sermons*.

3. Finish; deliverance; utterance. *Obsolete*.

Some men are tall and big; so some language is high and great. Then the words are chosen, their sound ample, the composition full, the *absolution* plenteous, and poured out, all grave, sinewy, and strong.—*B. Jonson, Discoveries*.

Absolutism. *s.* Abstraction suggested by Absolute in its political sense; autocracy.

If, however, the emperors cannot acquiesce in this, the other road is to complete *absolutism*.—*Correspondent from Hungary, Times*, August 21, 1861.

Absolutist. *s.* (used adjectivally in the extract). Supporter of absolutism.

In short, he said not a word about the Pragmatic Sanction, and consequently began his reign on the same *absolutist* footing which had been proclaimed on the 3rd of October.—*Correspondent from Hungary, Times*, August 31, 1861.

Absolutory. *adj.* With power to absolve.

Though an *absolutory* sentence should be pronounced in favour of the persons upon the account of nearness of blood; yet, if adultery shall afterwards be truly proved, he may be again proceeded against as an adulterer.—*Ayliffe, Parergon Juris Canonici*.

Absolve. *v. a.*

1. Clear; acquit of a crime.

Our victors, blest in peace, forget their wars, Enjoy past dangers, and *absolve* the stars. *Tickell*.
As he hopes, and gives out, by the influence of his wealth, to be here *absolved*; in condemning this man you have an opportunity of belying that general scandal, of redeeming the credit lost by former judgments.—*Swift, Miscellanies*.

2. Set free from an engagement or promise.

Compell'd by threats to take that bloody oath, And the act ill, I am *absolv'd* of both.

This command, which must necessarily comprehend the persons of our natural fathers, must mean a duty we owe them, distinct from our obedience to the magistrate, and from which the most absolute power of princes cannot *absolve* us.—*Locke*.

3. Pronounce absolution.

But all is calm in this eternal sleep;
Here grief forgets to groan, and love to weep:
Ev'n superstition loses every fear;
For God, not man, *absolves* our frailties here.

His vicar on earth is the Roman pontiff: without whose sanction you can neither promise nor perform. In his name I *absolve* your perjury and sanctify your arms; follow my footsteps in the paths of glory and salvation; and if ye still have

scruples, devote on my head the punishment and the sin.—*Gibbon, Decline and Fall of the Roman Empire*, ch. lxvii.

4. Finish; complete. *Rare*.

What cause Mov'd the Creator, in his holy rest
Through all eternity, so late to build
In chaos: and the work begun, how soon
Absolv'd. *Milton, Paradise Lost*, vii. 94.

If that which is so supposed infinitely distant from what is now current is distant from us by a finite interval, and not infinitely, then that one circulation which preceded it must necessarily be like ours, and consequently *absolved* in the space of twenty-four hours.—*Sir M. Hale, Origination of Mankind*.

Absolver. *s.* One who pronounces absolution.

They that take upon them to be the only *absolvers* of sin, are themselves held fast in the snares of eternal death.—*Dr. H. More, Against Idolatry, Preface*.

Absolving. *part. adj.* Capable of giving absolution.

It [Novatianism] declared that there were sins beyond the *absolving* power of the clergy.—*Milman, History of Latin Christianity*, b. i. ch. i.

Absonant. *adj.* [Lat. *absonans*, -antis, part. of *absono*.] Not in harmony: (with to). *Rare*.

For Stoicism to rejoice of funerals, and lament at births of men, is more *absonant* to nature than reason.—*Quarles, Judgment and Mercy, The Mourner*.

Absonus. *adj.* *Obsolete*, *rare*.

1. Not in harmony with, or agreeable to.

To suppose an uniter of a middle constitution, that should partake of some of the qualities of both, is unwarranted by any of our faculties; yea, most *absonus* to our reason.—*Glanville, Sceptica Scientifica*, ch. iv.

Parity of degrees in church-government hath no foundation in holy Scripture, and is as *absonus* to reason as parity in a state or family.—*Sir E. Dering, Speeches*, p. 139.

2. Unmusical.

That noise, as Macrobius truly inferreth, must be of necessity either sweet and melodious, or harsh and *absonus*.—*Fotherby, Atheomastix*, p. 318.

Absorb. *v. a.* [Lat. *absorbeo*.]

1. Swallow, or suck up.

The evils that come of exercise are, that it doth *absorb* and attenuate the moisture of the body.—*Bacon*.

Supposing the forementioned consumption should prove so durable as to *absorb* and extenuate the said sanguine parts to an extreme degree, it is evident that the fundamental parts must necessarily come into danger.—*Harvey, On Consumption*.

2. *Metaphorically*.

The nature of this, according to Hippolytus, deadly sin, which Callistus treated with such offensive tenderness, appears from the next sentence: it related to that grave question which had begun to *absorb* the Christian mind—the marriage of the clergy.—*Milman, History of Latin Christianity*, b. i. ch. i.

3. In *Physiology*.

Poisons are believed to act through the blood for the following reasons. First, they disappear during life from the great cavities, or other situations into which they have been introduced; that is, they are *absorbed*.—*Christison, Treatise on Poisons*, pt. ii. ch. i. sect. 2.

Absorbent. *adj.* In *Physiology*. Effecting absorption.

The chyle, the result of the digestive process, is taken up by the mucous lining of the intestinal canal by innumerable microscopic orifices that form the commencement of the lacteal system. This important system of *absorbent* vessels consists of slender canals enclosed between the two layers of the mesentery, to the root of which they converge from all the tract of the intestine.—*T. Rymer Jones, Animal Kingdom*, § 2274.

Sometimes, as in dysentery and cholera, the poison is carried with unusual rapidity through the alimentary canal. Sometimes, again, it remains comparatively inert, because, on account of the impaired rapidity of absorption it is not taken up with the usual quickness by the *absorbent* vessels.—*Christison, Treatise on Poisons*, pt. i. ch. i. sect. 2.

Absorbent. *s.*

1. That which effects absorption.

There is a third class of substances, commonly called *absorbents*: as the various kinds of shells, coral, chalk, crabs' eyes, &c., which likewise raise an effervescence with acids, and are therefore called alkalis, tho' not so properly, for they are not salts.—*Arbuthnot, On the Nature and Choice of Aliments*.

2. In *Physiology*. Absorbent gland.

But the most remarkable circumstance connected with *absorbents* of this class of animals is the discovery, made by Professor Müller of Berlin, of a system of lymphatic hearts destined to propel the products of absorption from the chief lymphatic

trunks into the veins.—*T. Rymer Jones, Animal Kingdom*, § 188.

Absorbing. *part. adj.*

1. Swallowing, or sucking up, everything else to the exclusion of one object.

Nevertheless, the events which had taken place in the interval were too tremendous in their character, and their interest was too absorbing, to allow them to brood over these distant disasters.—*Merivale, History of the Romans under the Empire*, ch. xxxiv.

2. In *Physiology*.

Again, many poisons act with a force proportional to the absorbing power of the texture with which they are placed in contact.—*Christison, Treatise on Poisons*, pt. i. ch. i. sect. 1.

Absorption. *s.* Absorption. *Rare.*

Absorpt. *part.* Swallowed or sucked up. *Obsolete.*

Moses imputed the deluge to the disruption of the abyss; and St. Peter, to the particular constitution of that earth, which made it obnoxious to be absorb in water.—*T. Burnet, Theory of the Earth*.

Some tokens shown
Of fearless friendship, and their sinking mates
Sustain; vain love, tho' laudable, absorb
By a fierce eddy, they together found
The vast profundity. *A. Philips.*

Absorption. *s.*

1. Act of swallowing or sucking up.

It was below the dignity of those sacred penmen, or the spirit of God that directed them, to show us the causes of this disruption, or of this absorption; this is left to the inquiries of men.—*T. Burnet, Theory of the Earth*.

The aversion of God's face is confusion; the least bending of his brow is perdition; but his 'totus æstus,' his whole fury, is the utter absorption of the creature.—*Bishop Hall, Remains*, p. 24.

2. State of being swallowed, or sucked up.

This necessarily engages us in the history of the rise, progress, and decay of the ancient Greek philosophy: in which is shown its original, like that of legislation, from Egypt: the several revolutions it underwent in its character, constantly attendant and conformable to the several revolutions of civil power: its gradual decay, and total absorption in the schools.—*Bishop Warburton, Alliance of Church and State*, p. 165.

3. In *Physiology*. Taking-up of digested and assimilated matter by the absorbents.

It might be of use to quote some of the numerous errors committed by medical witnesses, in consequence of having overlooked the effect of absorption in removing poisons beyond the reach of chemical analysis.—*Christison, Treatise on Poisons*, pt. i. ch. ii. sect. 3.

Abstain. *v. n.* [Lat. *abstineo*.] Hold off from anything; forbear; deny one's self any gratification.

If thou judge it hard and difficult,
Conversing, looking, loving, to abstain
From love's due rites, nuptial embraces sweet.
Milton, Paradise Lost, x. 993.

To be perpetually longing, and impatiently desirous of any thing, so that a man cannot abstain from it, is to lose a man's liberty, and to become a servant of meat and drink, or smoke.—*Jeremy Taylor, Rule and Exercises of Holy Living*.

Even then the doubtful billows scarce abstain
From the toss'd vessel on the troubled main.
Dryden, Virgil's Æneid.

Aristides appears throughout the whole course of his history as one of the few men who have not merely abstained from wrong, but have loved right, truth, and equity, and hated and resisted all things opposed to them with the steadiness of instinct.—*Bishop Thirlwall, History of Greece*, ch. xv.

Abstain. *v. a.* Keep from; hinder. *Obsolete.*

Whether he abstain men from marrying.—*Milton, Tetrachordon*.

Abstemious. *adj.* [Lat. *abstemius*.] Temperate, sober, abstinent, refraining from excess or pleasures.

The instances of longevity are chiefly amongst the abstemious. Abstinence in extremity will prove a mortal disease; but the experiments of it are very rare.—*Arbutnot, On the Nature and Choice of Aliments*.

Clytemnestra streams the love of wine expel,
(Such is the virtue of th' abstemious well.)
Whether the colder nymph that rules the flood
Extinguishes, and balks the drunken god;

Or that Melampus (so have some assur'd),
When the mad Proctides with charms he cur'd,
And pow'rful herbs, both charms and simples, cast
Into the sober spring, where still their virtues last.
Dryden, Fables.

Abstemiously. *adv.* In an abstemious manner.

The tone of his stomach never recovered its natural temper, even when he lived very abstemiously afterwards.—*Whiston, Memoirs*, p. 273.

Abstemiousness. *s.* Quality of being abstemious.

The Banyans, though healthy through their abstemiousness, are but of weak bodies and small courage.—*Sir T. Herbert, Travels*, p. 115.

The best expedient he [K. Charles I.] had to reconcile it, was to contract his diet to a few dishes out of the bill of fare and to eat in private. And his eating being usually agreeable to his exercise, this abstemiousness was in no wise displeasing; his temperance preserving his health.—*Sir T. Herbert, Memoirs*.

The Arabians were a nation of marauders, only tempered by some commercial habits; the Arab was disciplined in the severest abstemiousness and endurance; bred in utter recklessness of human life.—*Milman, History of Latin Christianity*, b. iv. ch. i.

Abstention. *s.* Act of holding off, or abstaining; abstinence.

The church superintended times and manners of abstention, and expressions of sorrow.—*Jeremy Taylor, Visitation of the Sick*, iv. 5.

Absterge. *v. a.* [Lat. *abstersus*, part. of *abstergeo*=wipe away.] Wipe; cleanse, purify.

Nor will we affirm that iron receiveth, in the stomach of the ostrich, no alteration; but we suspect this effect rather from corrosion than digestion; not any tendency to chylification by the natural heat, but rather some attrition from an acid and vitriolous humidity in the stomach, which may absterge and shave the scoriaceous parts thereof.—*Sir T. Browne, Vulgar Errors*, iii.

Absterion. *s.* Act of wiping or cleansing.

Absterion is plainly a scouring off, or incision of the more viscous humours, and making the humours more fluid, and cutting between them and the part, as is found in nitrous water, which scoureth linen cloth speedily from the foulness.—*Bacon, Natural History*, no. 42.

Absterive. *adj.* Effecting absterion.

It is good, after purging, to use apozemes and broths, not so much opening as those used before purging; but absterive and mundifying clysters also are good to conclude with, to draw away the reliques of the humours.—*Bacon, Natural History*.
A tablet stood of that absterive tree,
Where Æthiop's swarthy bird did build her nest.
Sir J. Denham.

There many a flow'r absterive grew,
Thy fav'rite flow'rs of yellow hue.

Abstinence. *s.*

1. Forbearance from anything.

Delicencie his swete tothe
Hath soffred so that it fordothe
Of abstinence all that there is.
Gower, Confessio Amantis, p. 14.

With from.

Because the abstinence from a present pleasure, that offers itself, is a pain, nay, oftentimes a very great one: it is no wonder that that operates after the same manner pain does, and lessens, in our thoughts, what is future; and so forces us, as it were, blindfold into its embraces.—*Locke*.

2. Fasting, or forbearance from necessary food. (It is generally distinguished from temperance, as the greater degree from the less; sometimes as single performances from habits; as, a day of abstinence, and a life of temperance.)

Say, can you fast? your stomachs are too young:
And abstinence engenders maladies.

Shakespeare, Love's Labour's Lost, iv. 3.
I tell thee of the hard usages of the ancient eremical Christians; of their rigorous abstinences; their afflicting meals; their nightly watchings.—*Bishop Hall, Balm of Gilead*.

And the faces of them which have used abstinence, shall shine above the stars; whereas our faces shall be blacker than darkness.—*2 Esdras*, vii. 55.

Religious men, who hither must be sent
As awful guides of heavenly government;
To teach you penance, fasts, and abstinence,
To punish bodies for the soul's offence.
Dryden, Indian Emperor.

Abstinency. *s.* Abstinence. *Obsolete.*

Were our rewards for the abstinencies, or riots, of this present life, under the prejudices of short, or finite, the promises and threats of Christ would lose much of their virtue and energy.—*Hammond, On Fundamentals*.

Abstinent. *adj.* See Abstain. Endowed with abstinence.

Seldom have you seen one continent that is not abstinent.—*Hales, Golden Remains, Sermons*, ad fin. p. 23.

Abstintly. *adv.* After the manner of one who is abstinent.

Abstráct. *v. a.*

1. Take one thing from another.

Could we abstract from these pernicious effects, and suppose this were innocent, it would be too light to be matter of praise.—*Dr. H. More, Decay of Christian Piety*.

2. Separate by distillation.

Having dephlegmed spirit of salt, and gently abstracted the whole spirit, there remaineth in the retort a styptical substance.—*Boyle*.

3. Reduce to an abstraction.

This doth she when from things particular

She doth abstract the universal kinds,

Which bodiless and immaterial are,

And can be only lodged within our minds.

And thus from divers accidents and acts

Which do within her observation fall,

She Goddesses and Powers Divine abstracts,

As Nature, Fortune, and the Virtues all.

Sir J. Davies, Immortality of the Soul, § 4.

Those who cannot distinguish, compare and abstract, would hardly be able to understand and make use of language.—*Locke*.

4. Reduce to an epitome.

If we would fix in the memory the discourses we hear, or what we design to speak, let us abstract them into brief compends, and review them often.—*Watts, Improvement of the Mind*.

Abstract. *adj.* [Lat. *abstractus*, part. of *abstraho*=draw off.]

1. Mentally separated from something else.

Mathematics, in its latitude, is usually divided into pure and mixed. And though the pure do handle only abstract quantity in general, as geometry, arithmetic; yet that which is mixed, doth consider the quantity of some particular determinate subject. So astronomy handles the quantity of heavenly motions, music of sounds, and mechanics of weights and powers.—*Bishop Wilkins, Mathematical Magick*.

Abstract terms signify the mode or quality of a being, without any regard to the subject in which it is; as, whiteness, roundness, length, breadth, wisdom, mortality, life, death.—*Watts, Logic*.

The second general division of names is into concrete and abstract. A concrete name is a name which stands for a thing; an abstract name is a name which stands for an attribute of a thing. Thus: John, the sea, this table, are names of things. White also is the name of a thing, or rather of things. Whiteness, again, is the name of a quality or attribute of those things. Man is a name of many things; humanity is a name of an attribute of those things. Old is a name of things; old-age, is a name of one of their attributes.

I have used the words concrete and abstract in the sense annexed to them by the schoolmen, who, notwithstanding the imperfections of their philosophy, were unrivalled in the construction of technical language, and whose definitions, in logic at least, though they never went more than a little way into the subject, have seldom, I think, been altered but to be spoiled. A practice, however, has grown up in more modern times, which, if not introduced by Locke, has gained currency chiefly from his example of applying the expression 'abstract name' to all names which are the result of abstraction or generalization, and, consequently, to all general names, instead of confining it to the names of attributes. The metaphysicians of the Condillac school—whose admiration of Locke, passing over the profoundest speculations of that truly original genius, usually fastens with peculiar eagerness upon his weakest points—have gone on imitating him in his abuse of language, until there is now some difficulty in restoring the word to its original signification. A more wanton alteration in the meaning of a word is rarely to be met with; for the expression general name, the exact equivalent of which exists in all languages I am acquainted with, was already available for the purpose to which abstract has been misappropriated, while the misappropriation leaves that important class of words, the names of attributes, without any compact distinctive appellation. The old acceptation, however, has not gone so completely out of use as to deprive those who still adhere to it of all chance of being understood. By abstract, then, I shall always mean the opposite of concrete; by an abstract name, the name of an attribute; by a concrete name, the name of an object.—*J. S. Mill, System of Logic*, i. 2, § 4.

2. General.

By relation to its application or non-application to objects, *logia* is divided into *Abstract* or General; into Concrete or Special.—*Sir W. Hamilton, Logic*, iii. 33.

With from.

Another fruit from the considering things in themselves, *abstract* from our opinions and other men's notions and discourses on them, will be, that each man will pursue his thoughts in that method, which will be most agreeable to the nature of the thing, and to his apprehension of what it suggests to him.—*Locke*.

3. Abstraction.

It is evident that these words, when concrete, are, like other concrete general names, connotative; they denote a subject, and connote an attribute: and each of them has or might have a corresponding *abstract* name, to denote the attribute connoted by the concrete. Thus the concrete 'like' has its *abstract* 'likeness'; the concretes 'father' and 'son' have, or might have, the *abstracts* 'paternity' and 'filiiety', or filiation. The concrete name connotes an attribute, and the *abstract* name which answers to it denotes that attribute.—*Mill, System of Logic*, p. 45.

4. State of being abstracted or disjoined: (with in).

The hearts of great princes, if they be considered, as it were, *in abstract*, without the necessity of states, and circumstance of time, can take no full and proportional pleasure in the exercise of any narrow bounty.—*Sir H. Wotton*.

With in and the.

It does not seem possible, then, to avoid the conclusion that, whatever be the proper key for harmonizing the records and documents of the early and later Church, and true as the dictum of Vincentius must be considered in the *abstract*, and possible as its application might be in his own age, when he might almost ask the primitive centuries for their testimony, it is hardly available now or effective of any satisfactory result.—*Glaistone, On the Relations of the State to the Church*, p. 24.

Weave such agreeing truths? *Dryden, Religio Laici*.

Whether the notions of absolute time, absolute place, and absolute motion, be not most *abstractedly* metaphysical?—*Bishop Berkeley, Analyst*, qu. 8.

Abstractedness. s. Attribute suggested by Abstracted.

If these latter prepositions, which supply the place of the cases, would be of such difficult invention on account of their *abstractedness*, some expedient to supply their place must have been of indispen-

sable necessity.—*Adam Smith, On the Formation of Languages*.

What are metaphysics themselves but intricate subtilties and fruitless *abstractions*?—*Burton, Anatomy of Melancholy*, p. 167.

They would be as much out of place in a ficti-
tious narrative, as a wen on an *academic* model.—
Whately, Miscellaneous Lectures and Reviews.

Académic. s. Member of an academy.

A young *academic* shall dwell upon a journal that
treats of trade, and be lavish in the praise of the
author; while persons skilled in those subjects hear
the tattle with contempt.—*Watts, Improvement of*
the Mind.

Such an effect of *academic* teaching is not how-
ever, necessary; and it must be considered an acci-
dental abuse of the system, which might be pre-
vented by a proper method of instruction—not a vice
inherent in *academies*.—*Sir G. C. Lewis, On the In-*
fluence of Authority in Matters of Opinion, ch. ix.

Académical. adj. Belonging to an academy.

He drew him first into the fatal circle, from a kind
of resolved privateness; where, after the *academical*
life, he had taken such a taste of the rural, as I have
heard him say, that he could well have bent his mind
to a retired course.—*Sir H. Wotton.*

The first of August had been fixed by Act of Parlia-
ment as the day before the close of which all bene-
ficed clergymen and all persons holding *academical*
offices must, on pain of suspension, swear allegiance
to William and Mary.—*Macaulay, History of Eng-*
land, ch. xiv.

If he went to school and to college, he generally
returned before he was twenty to the seclusion of

These doctrines I propose *academically* and for
experiment's sake.—*Cabalistical Dialogue*, p. 17:

Academician. s. Member of an academy.

In this country an academy would be expected to
do but little. If an *academician's* place were profit-

would endure the least disgust. Unanimity is im-
possible, and debate would separate the assembly.—
Johnson, Lives of the Poets, Roscommon.

Milton recommended this species on the organ, as

from Gr. *Ἀκαδημία*, a grove near Athens,
frequented by philosophers and their dis-
ciples.]

1. School of Plato.

Had the poor vulgar rout only, who were held
under the prejudices and prepossessions of educa-
tion, been abused into such idolatrous superstitions,
as to adore a marble, or a golden deity, it might
have been detested indeed, or pitied, but not so
much to be wondered at: But for the Stoas, the
Academy, or the Peripatons, to own such a paradox,
—this (as the Apostle says) was without excuse.—
South, Sermons, ii. 245.

2. Institution for the teaching and discussion
of intellectual subjects in general.

In the private *academies* of Italy, whither I was

vernment, i.

Academies for the cultivation of the arts of design
have, undoubtedly, contributed to promote that end,
though they have been accused of a tendency to con-
fine and pervert the natural taste and genius of the
young artist. *Academies* of painting may, it is true,
give authority and currency to a certain style and
manner, which, by frequent repetition, and by the
imitation of successive disciples, may degenerate into
a sort of mechanical and insipid ideal, wanting the
freshness, variety, and truth of nature.—*Sir G. C.*
Lewis, On the Influence of Authority in Matters of
Opinion, ch. ix.

3. For the fine arts.

Amongst the *academies*, which were composed by
the rare genius of those great men, these four are
reckoned as the principal; namely, the Athenian
school, that of Sicyon, that of Rhodes, and that of
Corinth.—*Dryden, Translation of Dufresnoy's Art*
of Painting.

those munificent Ptolemies, bountiful Mecæneses,
heroical patrons, divine spirits—that have provided
for us so many well-furnished libraries as well in our
public *academies* in most cities, as in our private
colleges. How shall I remember Sir Thomas Bodley,
&c.—*Burton, Anatomy of Melancholy*, p. 273.
Some Jesuits and two reverend men
Of our two *academies* I nam'd.
Donne, Poems, p. 130.

5. Smaller establishments affecting an aca-
demic, or university, title.

a. Private establishments for education in
general.

The first [request] is that you would employ the
utmost of your power and interest, both with the
king and parliament, to suppress and extinguish
those private, blind, conventicling schools or *aca-*

taught secretly by fanatics, here and there, all the
kingdom over.—*South, Sermons*, ii. 245.

Acæleph. s. [Gr. *ἀκαλήφη* = nettle.] In Zoo-
logy. Member of the order of *Acælephæ*,

From the researches of Milne-Edwards it appears
that the vascular system of the Beroform *Acælephæ*
communicates with the interior by means of emunc-
tory canals analogous to the small tubes situated on
the margin of the disk. In Beroe Forskallii Milne-
Edwards was enabled to assure himself of the exist-
ence of two such outlets, situated, not on the an-
terior margin of the body, as in other *Acælephæ*, but
at its upper extremity.—*T. Rymer Jones, General*
Outline, &c., ch. vi.

He (Mr. Huxley) maintains that it (the Appen-
dicularia) is neither an *Acælephæ*, as supposed by
Chamisso, or (sic) a Pteropod, as conjectured by
Martius, but one of the Tunicata.—*Forbes and*
Hanley, British Mollusca.

In May 1837, Sars observed a similar gemmation
in the *Thaumantias multicirrata*, a (probably larval)
Acælephæ, one inch in diameter.—*Owen, Lectures on*
Comparative Anatomy, p. 178.

Acánthus. s. [Lat.] The *Acacia vera* (an
Egyptian thorn which produces gum-
arabic).

On either side
Acanthus, and each odorous bushy shrub,
Fenc'd up the verdant wall.

To hear the emerald-colour'd water falling
Thro' many a wov'n *acanthus*-wreath divine!

Only to hear were sweet, stretch'd out beneath the
pine.
Tennyson, The Lotus-Eaters, l.

Acarus. s. [Lat.] Name of a genus of the
class Arachnida. (The plural, *Acari*, is
more especially applied to cheese mites,
but it is in common language extended to
bird-lice, ticks, &c.)

The existence of such an insect, in some cases of
scabies, has been fully demonstrated; but the breed-
ing of these *Acari* in the scabrous skin is a rare and
casual circumstance.—*Hooper, Medical Dictionary*,
v. *Scabies*.

Acéter, or Achátour. s. [N.Fr. *achâtour*.]

acates, and those so excellently dressed as his appe-
tite knows not to which of them it shall first address
his hand.—*Shelton, Translation of Don Quixote*,
i. 4, 23.

Accáble. v. n. Same as **Encumber.** *Obso-*

Acceleration. s.

1. Act of quickening motion.

For the present it is enough for us to demonstrate certain properties of accelerated motion, the acceleration being according to the very simple law that the velocity is proportional to the time. It was, however, an easy step to consider this acceleration as caused by the continual action of gravity.—*Whewell, History of the Inductive Sciences*, b. vi. ch. ii. sect. 2.

2. State of the body accelerated, or quickened in its motion.

Accent. s. [Lat. *accentus*.]

a. Applied to persons.

A man that is guilty of a felonious offence, not principally, but by participation; as, by commandment, advice, or concealment. And a man may be *accessory* to the offence of another, after two sorts, by the common law, or by statute: and, by the common law, two ways also; that is, before or after the fact. Before the fact; as, when one commandeth or adviseth another to commit a felony, and is not present at the execution thereof; for his presence makes him also a principal; wherefore there cannot be an *accessory* before the fact in manslaughter; because manslaughter is sudden and not premeditated. *Accessory* after the fact is, when one receiveth him, whom he knoweth to have committed felony. *Accessory* by statute, is he that abets, counsels, or hides any man committing, or having committed an offence made felony by statute.—*Cowell, Law Dictionary*.

By the common law, the *accessories* cannot be proceeded against, till the principal has received his trial.—*Spenser, State of Ireland*.

Into perplexity, and new amazement;
For whether is he gone? What *accident*
Hath rapt him from us?

That others may have time to take their turn.

By accident. Accidentally, by chance.

The reformation owed nothing to the good intentions of King Henry. He was only an instrument of it (as the logicians speak) *by accident*.—*Swift, Miscellanies*.

2. Property or quality of any being, which may be separated from it, at least in thought.

If she were but the body's *accident*,
And her sole being in it did subsist,
As white in snow, she might herself absent,
And in the body's substance not be miss'd.
Sir J. Davies, Immortality of the Soul.

In Logic.

Under the remaining predicable, Accidents, are included all attributes of a thing which are neither involved in the signification of the name . . . nor have, so far as we know, any necessary connection with attributes which are so involved. They are commonly divided into separable and inseparable accidents. Inseparable accidents are those which . . . are yet never in fact known to be absent. A concise mode of expressing the same meaning is, that inseparable accidents are properties which are universal to the species, but not necessary to it. Thus, blackness is an attribute of a crow, and, as far as we know, a universal one. But if we were to discover a race of white birds, in other respects resembling crows, we should not say, These are not crows;

we should say, These are white crows. . . . Since, however, none but black crows are known to exist, blackness, in the present state of our knowledge, ranks as an *accident*, but an inseparable *accident*, of the species crow. Separable accidents are those which are found, in point of fact, to be sometimes absent from the species; which are not only not necessary, but not even universal. . . . Thus, the colour of an European is one of the separable accidents of the species man, because it is not an attribute of all human creatures. Being born, is also . . . a separable accident of the species man, because, although an attribute of all human beings, it is so only at one particular time. A fortiori those attributes which are not constant even in the same individual, as, to be in one or in another place, to be hot or cold, sitting or walking, must be ranked as separable accidents.—*Mill, System of Logic*, b. i. ch. 7, § 8.

Porphyry wrote an introduction to the Categories of that philosopher, which is entitled On the Five Words. The 'Five Words' are Genus, Species, Difference, Property, *Accident*.—*Whewell, History of Scientific Ideas*, b. viii. ch. i. § 11.

The *Accident* is that which may be present and absent without the destruction of the subject, as to sleep is an *Accident* (a thing which happens) to man.—*Ibid*.

3. In Grammar. Inflections of a word.

4. Occurrence, fact, circumstance.

(Ord MS.)

When you have paid the debt of tenderness you owe to the memory of a father, I doubt not but you will turn your thoughts towards improving that *accident* to your own ease and happiness.—*Bishop Atterbury, To Pope*, Nov. 8, 1717. (Ord MS.)

In Logic.

In the Aristotelian phraseology, Genus and Differentia are of the essence of the subject; by which, as we have seen, is really meant that the properties signified by the genus and those signified by the differentia, form part of the connotation of the name

denoting the species. Proprium and Accidens, on the other hand, form no part of the essence, but are predicated of the species only *accidentally*. Both are accidents, in the wider sense in which the accidents of a thing are opposed to its essence; though, in the doctrine of the predicables, accidents is used for one sort of accident only, proprium being another sort. Proprium, continue the schoolmen, is predicated *accidentally*, indeed, but necessarily; or, as they further explain it, signifies an attribute which is not indeed part of the essence, but which flows from, or is a consequence of, the essence, and is, therefore, inseparably attached to the species; e.g. the various properties of a triangle, which, though no part of its definition, must necessarily be possessed by whatever comes under that definition.—*Mill, System of Logic*, b. ii. ch. 7, § 7.

2. Casually, fortuitously.

Although virtuous men do sometimes *accidentally* make their way to preferment, yet the world is so corrupted that no man can reasonably hope to be rewarded in it, merely upon account of his virtue.—*Swift, Miscellanies*.

Such a word may be considered as two or more names, *accidentally* written and spoken alike.—*Mill, System of Logic*, b. i. ch. i.

It may also be a word formed catachrestically, or at least under a confusion of ideas between the two. Lastly, there may be two words, one = cite; one from *cicio*. In each of the following quotations either meaning can be borne. In the first, perhaps, *cite* is the better equivalent; in the second, perhaps, *excite*. This latter word, it should be remembered, has two possible origins, *excito* and *excitus*, as in *qui bello exciti reges* in Virgil, and *portisque excita juvenus* in Lucan.] Call; summon; excite. *Obsolete*.

The *achromatism* [i.e. destruction of the primary colours which accompany the image of an object seen through a lens or prism] of lenses depends on the same principles, and is determined in the same manner, as that of prisms.—*Ure, Dictionary of Science, Literature, and Art*, in voce.

Ácid. *adj.* [Lat. *acidus*; Fr. *acide*.] Sour, sharp.

Wild trees last longer than garden trees; and in the same kind, those whose fruit is *acid* more than those whose fruit is sweet.—*Bacon, Natural History*. *Acid*, or sour, proceeds from a salt of the same nature, without mixture of oil; in austere tastes the oily parts have not disentangled themselves from the salts and earthy parts; such is the taste of unripe fruits.—*Arbuthnot, On the Nature and Choice of Aliments*.

Ácid. *s.*

1. Acid substance.

The chymist can draw subtle spirits, that will work upon one another at some distance, viz. spirits of alkalies and *acids*.—*Aubrey, Miscellanies*, p. 147. Salts, sulphurs, and mercuries, *acids*, and alkalies, are principles which can smooth things to those only who live about the furnace.—*A. Smith, History of Astronomy*, § 2.

2. In *Chemistry*. Opposite to an alkali, q. v.; also Oxygen.

The first attempt to form a systematic chemical nomenclature was made by Lavoisier, Guyton de Morveau, and Fourcroy, soon after the discovery of oxygen gas. The newly discovered elements were named from some striking property. Thus oxygen, from *ὀξύς*, acid, and *γενναῖον*, to generate, was so called from a belief (since shown to be inaccurate) that it is the universal cause of acidity. The name of an *acid* was derived from the substance acidified by the oxygen; to which was the termination in -ic. Thus sulphuric and carbonic *acids* signified compounds of carbon and sulphur with oxygen. Should sulphur, or any other body, form two acids, the name of that containing the least oxygen was made to terminate in -ous, as sulphurous acid.—*Turner, Inorganic Chemistry*, p. 128.

Ácidist. *s.* One who maintains the doctrine of acids.

I will at present instance only in brimstone, which is a mild soft body, and agreeable to what the *acidists* would call an alkali.—*Dr. Stare, On Alkalies and Acids, History of the Royal Society*, iv. 442.

Acidity. *s.* Attribute suggested by the adjective Acid.

Fishes, by the help of a dissolvent liquor, corrode and reduce their meat, skin, bones, and all, into a chylus or cream; and yet this liquor manifests nothing of *acidity* to the taste.—*Ray*.

ACID

When the taste of the mouth is bitter, it is a sign of a redundancy of a bilious alkali, and demands a quite different diet from the case of acidity or sourness.—*Arbuthnot, On the Nature and Choice of Aliments.*

Acidulate. v. n. Impregnate or tinge with acids in a slight degree.

A diet of fresh unsalted things, watery liquors, acidulated, farinaceous emollient substances, sour milk, butter, and acid fruits.—*Arbuthnot, On the Nature and Choice of Aliments.*

Acidulent. adj. With an expression of acidity.

But king's confessor Abbé Moudon starts forward; with anxious acidulent face, twitches him by the sleeve; whispers in his ear. Whereupon the poor cardinal has to turn round; and declare audibly, that his majesty repeats of any subjects of scandal he may have given (a pu donner); and purposes, by the strength of Heaven assisting him, to avoid the like for the future!—*Carlyle, French Revolution*, pt. i. b. i. ch. iv.

Acidulous. adj. Slightly acid.

Dulcified from acidulous tincture.—*Burke.*

And will *acknowledge* you and Jessica;
In place of lord Bassanio and myself.

Shakespeare, Merchant of Venice, iii. 4.
None that *acknowledge* God, or providence,
Their souls' eternity did ever doubt.

Sir J. Davies, On the Immortality of the Soul.
It repeated the promise respecting canons and constitutions, *acknowledged* that all convocations ought to be summoned by the king's writ, and agreed that a commission of thirty-two persons should be appointed for the reformation of the ecclesiastical laws.—*Gladstone, The State in its Relations to the Church*, ch. vii.

But the influence attributed to Cecrops, and the mention of Amphictyon among the kings of Athens, indicate that Athens was *acknowledged* as the head of this confederacy.—*Bishop Thirlwall, History of Greece*, ch. xi.

2. Confess (as a fault).

For I *acknowledge* my transgressions: and my sin is ever before me.—*Psalms*, li. 3.

In the first place, therefore, I thankfully *acknowledge* to the Almighty power the assistance he has given me in the beginning, and the prosecution of my present studies.—*Dryden.*

Acknowledgement. s.

1. Recognition, admission, concession, confession.

The second is an *acknowledgement* to his majesty for the leave of fishing upon his coasts; and though this may not be grounded upon any treaty, yet, if it appear to be an ancient right on our side, and custom on theirs, not determined or extinguished by any treaty between us, it may with justice be insisted on.—*Sir W. Temple, Miscellanies.*

Acolde and longed at his gate.

It is duty, according to the papal law, when the bishop sings mass, to order all the inferior clergy to appear in their proper habits; and to see that all the offices of the church be right performed; to ordain the *acólouthist*, to keep the sacred vessels.—*Ayliffe, Parergon Juris Canonici.*

Acolyte, or Acolythe. s. Same with Acolouthist.

In Gardening, and common conversation, aconite is the name of the *Pranthis nivalis*. For the extent to which it is a synonyme for the *wolfbane*, see that word.—In Literature, it is used for any poisonous vegetable.

Our land is from the rage of tigers freed,
Nor nourishes the lion's angry seed;
Nor poisonous *aconite* is here produc'd;

On wildings and on strawberries they fed;
Cornels and bramble berries gave the rest,
And fallen *acorns* furnish'd out a feast.

Dryden, Translation from Ovid.
He that is nourish'd by the *acorns* he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself.—*Locke.*

Acorn-shell. s. Barnacle.

The other class is the cirrhopods, in which the famous barnacles and *acorn-shells* are included.—*Johnson, Introduction to Conchology.*

The typical Cirrhopods are divided according to these modes of attachment into two primary groups, viz. the pedunculated, or Lepadoids, and the sessile, or Balanoids. The first are commonly known by the name of Barnacles; the second by that of Crown-shells or *Acorn-shells*. Such are the characters of the typical members of the class. The aberrant burrowing genus *Alcipe*, and the naked, ventless *Proteolepas*, parasitic on other Cirrhopods, form, according to Darwin, types of two orders, equivalent respectively to that including all the ordinary Cirrhopods.—*Owen, Lectures on Comparative Anatomy*, &c., lect. xiii.

The acoustic organs are situated just beneath the basal articulation of the first pair of cirri. Each consists of a sac-like cavity, which incloses the true acoustic vesicle. The orifice of the vesicle is closed by a delicate lid, formed by the expansion of a large nerve, which here abruptly terminates. Mr. Darwin, to whom we owe the knowledge of this structure, has not found any otoliths in the acoustic vesicle, but only groups of yellowish nucleated cells in the pulpy fluid.—*Owen, Lectures on Comparative Anatomy*, lect. 13.

Acoustica. s. [Gr. ἀκουστικά, neut. plur. of ἀκούστικός = appertaining to hearing.] Science of sound.

Sanveur, who, though deaf for the first seven years of his life, was one of the greatest promoters of the science of sound, and gave it its name *acoustics*, endeavoured, also, about the same time, to determine the number of vibrations of a standard note, or as he called it, fixed sound.—*Whewell, History of the Inductive Sciences*, b. viii. ch. ii.

Of the organ of hearing there is no outward sign; but the essential part, the acoustic labyrinth, is present, and the semicircular canals largely developed within.—*Owen, Lectures on Comparative Anatomy*, introd. lect.

The sciences of this kind which require our notice are those which treat of the sensible qualities, sound, light, and heat, that is *acoustics*, optics, and thermotics.—We begin our account of the secondary mechanical sciences with *acoustics*, because the progress towards right theoretical views was, in fact, made much earlier in the science of sound than in those of light and heat: and also because a comprehension of the theory to which we are led in this case, is the best preparation for the difficulties (by no means inconsiderable) of the reasonings of theorists on the other subjects.—*Whewell, History of the Inductive Sciences*, b. viii. introd.

Acquaint. v. a. [Fr. *acquinter*.]

1. Make familiar with: (applied either to persons or things: followed by *with*).

2. Slight or initial knowledge, short of friendship: (as applied to persons).

3. Person with whom we are acquainted.

But she, all vow'd unto the red-cross knight,
His warring peril closely did lament,
No in this new *acquaintance* could delight.

4. **Catachrestic for Acquaintants.** [This derivation is Todd's, who suggests that the acquaintance of the following extracts is the plural of this word, i. e. *acquaintants*. If so, it is a word of the same character, in respect to its catachresis, as *accidence*. See that word.]

This, my lord, has justly acquired you as many friends, as there are persons who have the honour to be known to you: mere acquaintances you have none, you have drawn them all into a nearer line; and they who have conversed with you, are for ever after inviolably yours.—*Dryden*.

We see he is ashamed of his nearest acquaintances.—*Boyle, Against Bentley*.

- Acquiesce. v. n.** [Fr. *acquiescer*; Lat. *acquiesco*.] Rest in, or remain satisfied with, anything: (with *in* before the object).

Neither a bare approbation of, nor a mere wishing, nor unactive complacency in, nor, lastly, a natural inclination to things virtuous and good, can pass before God for a man's willing of such things; and, consequently, if men, upon this account, will needs take up and acquiesce in an airy ungrounded persuasion, that they will those things which really they not will, they fall thereby into a gross and fatal delusion.—*South*.

He hath employed his transcendent wisdom and power, that by these he might make way for his benignity, as the end wherein they ultimately acquiesce.—*Grew*.

The Empire must acknowledge itself as a grant from the papacy, as a grant revocable for certain offences against the ecclesiastical rights and immunities; it must humbly acquiesce in the uncontrolled prerogative of the Cardinals to elect the Pope; abandon all the imperial claims on the investiture of the prelates and other clergy with their benefices.—*Milman, History of Latin Christianity*, b. vii. ch. i.

- Acquiescence. s.**

1. Silent appearance of content: (distinguished on one side from avowed consent, on the other from opposition).

(Ord MS.)

- Acquirable. adj.** Capable of being acquired.

Those rational instincts, the connate principles engraven in the human soul, though they are truths acquirable and deducible by rational consequence and argumentation, yet seem to be inscribed in the very crasis and texture of the soul, antecedent to any acquisition by industry or the exercise of the discursive faculty in man.—*Sir M. Hale, Origination of Mankind*.

If the powers of cogitation and volition, and sensation, are neither inherent in matter as such, nor acquirable to matter by any motion or modification of it; it necessarily follows, that they proceed from some cogitative substance, some incorporeal inhabitant within us, which we call spirit and soul.—*Bentley*.

1. Gain by one's own labour or power; obtain what is not received from nature, or transmitted by inheritance.

Motion cannot be perceived without the perception of its terms, viz. the parts of space which it immediately left, and those which it next acquires.—*Glanville, Scepis Scientifica*.

- Acquired. part. adj.** Gained by one's self: (in opposition to those things which are bestowed by Nature).

We are seldom at ease, and free enough from the solicitation of our natural or adopted desires; but a constant succession of uneasiness, out of that stock, which natural wants, or acquired habits, have heaped up, take the will in their turns.—*Locke*.

- Acquirement. s.** That which is acquired; gain; attainment: (may be properly used in opposition to the gifts of Nature).

An isolated body-corporate, which, out of old confusions while the sceptre of the sword was confusedly struggling to become a sceptre of the pen, had got itself together, better and worse, as bodies-corporate do, to satisfy some dim desire of the world, and many clear desires of individuals; and so had grown, in the course of centuries, on concession, on acquirement and usurpation, to be what we see it: a prosperous social anomaly, deciding law-suits, sanctioning or rejecting laws; and withal disposing of its places and offices by sale for ready money,—which method sleek President Hénault, after meditation, will demonstrate to be the indifferent best.—*Carlyle, French Revolution*, pt. i. b. iii. ch. v.

- Acquiring. verbal abs.** Acquirement.

The king, in honour, could do no less than give back to his son the privilege of his blood, with the acquisitions of his father's profession.—*Naunton, Fragmenta Regalia, Leicester*.

- Acquisitio. s.** [Lat. *acquisitio*, -onis.]

- Actinometer. s. [Gr. ἄκτις, -μετρος = ray, μετρεω = measure.] Instrument for measuring the effect of the sun's rays.

It does not belong to our present purpose to speak
of instruments of which the object is to measure,
not sensible qualities, but some effect or modification
of the cause by which such qualities are produced:
such, for instance, are the Calorimeter . . . ; and
the Actinometer, invented by Sir John Herschel, in
order to determine the effect of the sun's rays by
means of the heat which they communicate in a
given time; which effect is, as may readily be sup-
posed, very different under different circumstances
of atmosphere and position.—*Whewell, History of
Scientific Ideas, b. iv. § v. 20.*

action is made so much the more criminal and in-
excusable.—*South.*

The peculiar faculty of his mind, which Thucydides
contemplated with admiration, was the quickness
with which it seized every object that came in its

situations, and sudden junctures, and, penetrated
into remote consequences.—*Bishop Thirlwall, His-

Our orators are observed to make use of less
gesture or action than those of other countries.—
Addison.

Much need not be said on the subject of action,
which is at present so little approved, or, designedly,
employed, in this country, that it is hardly to be
reckoned as any part of the orator's art. Action,
however, seems to be natural to man, when speaking
earnestly: but the state of the case at present seems
to be, that the disgust excited, on the one hand, by
awkward and ungraceful motions, and, on the other,
by studied gesticulations, has led to the general dis-
use of action altogether; and has induced men to
form the habit of keeping themselves quite still, or
nearly so, when speaking.—*Whately, Rhetoric, pt.
iv. ch. iv. § 5.*

Just like the wheeling of the mountain winds
Is the action of the prancing steed.

Hundreds admire her paces,

Like one in frenzy passing.

The Book of the Dean of Lismore.

- In Law. Process; writ: (with against before the person, and for before the thing).

Actions are personal, real, and mixt: action per-
sonal belongs to a man against another, by reason of
any contract, offence, or cause, of like force with a
contract or offence made or done by him or some
other, for whose fact he is to answer. Action real is
given to any man against another, that possesses the
thing required or sued for in his own name, and no
other man's. Action mixt is that which lies as well
against or for the thing which we seek, as against
the person that hath it; called mixt, because it hath
a mixt respect both to the thing and to the person.

Action is divided into civil, penal, and mixt.
Action civil is that which tends only to the recovery
of that which is due to us; as, a sum of money
formerly lent. Action penal is that which aims at
some penalty or punishment in the party sued, be it
corporal or pecuniary; as, in common law, the next
friends of a man feloniously slain shall pursue the
law against the murderer. Action mixt is that
which seeks both the thing whereof we are deprived,
and a penalty also for the unjust detaining of the
same.

Action upon the case is an action given for re-
dress of wrongs done without force against any man,

A knave, a rascal, a filthy worsted-stocking knave;
a lily-liver'd action-taking knave.—*Shakespeare,
King Lear, ii. 2.*

- Activate. v. u. Make active. Rare, faulty.

As snow and ice, especially being holpen, and
their cold activated by nitre or salt, will turn water
into ice, and that in a few hours; so it may be, it
will turn wood or stiff clay into stone in longer
time.—*Bacon.*

- Active. adj.

- With the power or quality of acting.

These particles have not only a vis inertiae, ac-
companied with such passive laws of motion as
naturally result from that force, but also they are
moved by certain active principles, such as is that of
gravity, and that which causes fermentation, and
the cohesion of bodies.—*Sir I. Newton, Opticks.*

- Acting: (opposed to passive, which sug-
gests suffering).

—When an even flame two hearts did touch,

His office was indulgently to fit

Actives to passives, correspondency

Only his subject was. *Donne, Poems, p. 49.*

If you think that by multiplying the additions
in the same proportion that you multiply the ore,
the work will follow, you may be deceived: for
quantity in the passive will add more resistance
than quantity in the active will add force.—*Bacon.*

- Busy, engaged in action: (opposed to idle
or sedentary, or any state of which the
duties are performed only by the mental
powers).

'Tis virtuous action that must praise bring forth,
Without which, slow advice is little worth;

activeness of the Spanish agents about our court.—

plied either to things or persons).

Salt put to ice, as in the producing of the artificial
ice, increaseth the activity of cold.—*Bacon.*

Our adversary will not be idle, though we are;
he watches every turn of our soul, and incident of

our life; and if we remit our *activity*, will take advantage of our indolence.—*Rogers*.

So that not only does the definition, as thus expressed, comprehend all those *activities*, bodily and mental, which constitute our ordinary idea of life; but it also comprehends both those processes of growth by which the organism is brought out into general fitness for these *activities*, and those after-processes of adaptation by which it is specially fitted to its special *activities*.—*Herbert Spencer, Principles of Psychology*, pt. iii. ch. iv.

This is the world-famous Twentieth of June, more worthy to be called the Procession of the Black Breeches. These false beauties of the stage are no more lasting

upon them, they vanish in a twinkling.—*Dryden, Spanish Friar*.

Actualize. v. a. Make actual.

This Reform seems the ne plus ultra of that tendency of the public mind which substitutes its own undefined notions or passions for real objects and historical actualities. There is not one of the ministers—except the one or two revolutionists among them—who has ever given us a hint, throughout this long struggle, as to what he really does believe will be the product of the bill; what sort of House of Commons it will make for the purpose of governing this empire soberly and safely. No; they have actualized for a moment a wish, a fear, a passion, but not an idea.—*Coleridge, Table Talk*.

Actuation. s. Operation; bringing into action.

The soul, being an active nature, is always propending to the exercise of one faculty or other, and that to the utmost it is able; and yet, being of a limited capacity, it can employ but one in height of exercise at once; which when it loseth and abates of its strength and supremum vigour, some other, whose improvement was all this while hindered by this its engrossing rival, must by consequence begin now to display itself, and to awaken into a more vigorous *actuation*.—*Glanville, Pre-existence of Souls*, p. 110.

I have presupposed all things distinct from him to have been produced out of nothing by him, and consequently to be posterior not only to the motion, but the *actuation* of his will.—*Bishop Pearson, Exposition of the Creed*, art. iv.

Acuate. v. a. Sharpen to a point, invigorate with any powers of sharpness.

The learned and ingenious author of *Hermes*, with great strength of argument, shews, that language is founded in compact, and not in nature. His friend, Lord Monboddo, with great learning and ingenuity, supports the same opinion, and insists that language is not natural to man, but that it is acquired; and, in the course of his reflections, he *adduces* the opinions not only of heathen philosophers, poets, and historians, but of Christian divines, both ancient and modern.—*Astle, Origin and Progress of Writing*, ch. i.

Adequate. adj. Equal; proportionate; correspondent.

The rules or cautions usually laid down by logical writers for framing a definition, are very obvious: viz. 1st. The definition must be *adequate*, i.e. neither too extensive nor too narrow for the thing defined, e.g. to define 'fish,' 'an animal that lives in the water,' would be too extensive, because many insects, &c., live in the water; to define it 'an animal that has an air-bladder' would be too narrow, because many fish are without any. Or again, if, in a definition of 'money,' you should specify its being 'made of metal,' that would be too narrow, as excluding the shells used as money in some parts of Africa; if, again, you define it as an 'article of value given in exchange for something else,' that would be too wide, as it would include things exchanged by barter; as when a shoemaker who wants coals, makes an exchange with a collier who wants shoes.—*Whately, Logic*, v. § 6.

Contingent death seems to be the whole *adequate* object of popular courage; but a necessary and unavoidable coffin strikes paleness into the stoutest heart.—*Harvey, On Consumptions*.

Those are *adequate* ideas, which perfectly represent their archetypes or objects. Inadequate are but a partial, or incomplete, representation of those archetypes to which they are referred.—*Watts, Logic*.

We may consider Fabius and Cincius as giving the results of original observations on grounds of *adequate* credibility from the commencement of the First Punic War.—*Sir G. C. Lewis, On the Credibility of the early History of Rome*, i. 80.

With to.

The arguments were proper, *adequate*, and sufficient to compass their respective ends.—*South*.

Adhere. v. n. [Lat. *adhæreo*; from *ad* = to, *hæreo* = stick.—*Adhere*, with its derivatives, is one of the few words in English where there is a true aspiration, i.e. an actual combination of the sounds of *d* and *h*, each pronounced separately, and without any modification. The ordinary combinations *th* (*then*), *sh* (*shine*), &c., are simply orthographic expedients for expressing certain sounds for which we have no separate letter—combinations of letters not of sounds, combinations for the eye rather than the ear. The case before us, however, is a true sound of *d + h*.]

Modes are said to be inherent or *adherent*, that is, proper or improper. *Adherent* or improper modes arise from the joining of some accidental substance to the chief subject, which yet may be separated from it; so when a bowl is wet, or a boy is clothed, these are *adherent* modes; for the water and the clothes are distinct substances which adhere to the bowl, or to the boy.—*Watts, Logic*.

To that treaty Spain and England gave in their adhesion; and thus the four great powers which had long been bound together by a friendly understanding were bound together by a formal contract.—*Macaulay, History of England*, ch. xiv.

2. In Psychology. Connection as a basis of association.

A voluntary act, directed to the muscle that rotates the thigh outward, gives the requisite position to the foot, and the act is sustained while the walking movement goes on. By this means there grows up in course of time an adhesion between the tension of the rotator muscles and the several movements of walking, and at last they coalesce in one complex whole, as if they had been united in the original mechanism of the system. This agglutination of acts is very common among our mechanical acquirements.—*Bain, The Senses and the Intellect*, b. ii. ch. i. p. 322.

The actions thus associated are voluntary actions; they are stimulated from the cerebral centre, and it is within the cerebral hemispheres that the adhesion takes place. A stream of conscious nervous energy, no matter how stimulated, causes a muscular contraction, a second stream plays upon another muscle; and the fact that these currents flow together through the brain is sufficient to make a partial fusion of the two, which in time becomes a total fusion, so that one cannot be commenced without the other commencing also.—*Bain, The Senses and the Intellect*, b. ii. ch. i. p. 323.

Adhesive. adj. Sticking; tenacious.

If slow, yet sure, adhesive to the tract, Hot steaming up. *Thomson*.

There is no flavour comparable, I will contend, to that of the crisp, tawny, well-watched, not over-roasted, crackling, as it is well called—with the adhesive oleaginous—O call it not fat! but an indefinable sweetness growing up to it—the tender blossoming of fat—fat cropped in the bud—taken in the shoot—in the first innocence—the cream and quintessence of the child-pig's yet pure food—the lean, no lean, but a kind of animal manna—or, rather, fat and lean (if it must be so) so blended and running into each other, that both together make but one ambrosian result or common substance.—*C. Lamb, Essays of Elia, Dissertation upon Roast Pig*.

Adhesiveness. s. Attribute suggested by Adhesive; tenacity.

This associating principle is the basis of memory, habit, and the acquired powers in general. Writers on mental science have described it under various names. Sir William Hamilton terms it the Law of 'Redintegration,' regarding it as the principle whereby one part of a whole brings up the other

A D I T

parts, as when one syllable of a name recalls the rest, or one house in a street suggests the succeeding ones. The associating links, called Order in Time, Order in Place, and Cause and Effect, are all included under it. We might also name it the Law of Adhesion, Mental Adhesiveness, or Acquisition.—*Bain, The Senses and the Intellect*, b. ii. ch. i. p. 318.

By one prompting the arms are raised and lowered alternately; by another they are moved forwards and backwards: in the course of a few repetitions adhesiveness comes in aid of the inward stimulus, and the movements grow more frequent and more decided.—*Bain, The Senses and the Intellect*, b. ii. ch. i. p. 320.

Adiaphorist. s. One who is indifferent.

One of the excuses suggested in these Memoirs for his [Lord Burleigh] conforming, during the reign of Mary, to the Church of Rome, is that he may have been of the same mind with those German Protestants who were called Adiaphorists, and who considered the popish rites as matters indifferent. Melancthon was one of these moderate persons. We should have thought this not only an excuse, but a complete vindication, if Cecil had been an Adiaphorist for the benefit of others as well as for his own.—*Macaulay, Essays, Burleigh and his Times*.

Adiaphorous. adj. [Gr. ἀδιάφορος: element for element = in-dif-ferent.]

Adjacent. adj. [Lat. adjacens; gen. adjacent-is. The accent here given is doubtful; the pronunciation adjacent being more correct, and by no means uncommon. Admittance. *s.*

1. Act of admitting; or permission to enter.

Admitted. *part. adj.* Recognized; conceded as an argument.

These are questions upon the fact, or professed solutions of the fact, and belong to the province of opinion; but to a fact do they relate, on an *admitted* fact do they turn, which must be ascertained as other facts, and surely has on the whole been so ascertained, unless the testimony of so many centuries is to go for nothing.—*J. H. Newman*, *Essay on the Development of Christian Doctrine*.

I. ch. I.

proposed to the world a form as themselves did like.

A custom subsisted in the Carolingian court,
that whoever asked or received any boon from
royalty, kissed the sovereign's knee or buskin, in
token of grateful humility. This mode of obeisance
had no relation to 'feudalism.' 'La bouche et les
mains' sufficed: merely as senior the king could

Her *advocate* to th' loudest.
Shakespeare, Winter's Tale, ii. 2.
Of the several forms of government that have been, or are, in the world, that cause seems commonly the better that has the better *advocate*, or is advantaged by fresher experience.—*Sir W. Temple, Miscellanies.*

With for.

Poes to all living worth except your own,
And *advocates* for folly dead and gone.
Pope, Epistles.

2. In the scriptural and sacred sense, it stands for one of the offices of our Redeemer.

Me his *advocate*
And propitiation; all his works on me,
Good or not good, ingraft.
Milton, Paradise Lost, xi. 33.

Advocateship. s.

1. Duty or place of an advocate.

Except that we shall call you Orator Fly.
B. Jonson, New Inn, ii. 6.
2. Assistance or support of a great person in a suit.

This redargution of the world was made a part of the *advocateship* of the Holy Spirit by our Lord, 'When he is come, he will reprove the world of sin, because they believe not on me.'—*Halliwel, Saviour of Souls, p. 71.*

Advocatess. s. Female advocate. *Rare.*

go to him, as an advocate? Therefore God hath provided us of an *advocatess*, [the Virgin Mary,] who is gentle and sweet, &c.—and many other such dangerous propositions.—*Jeremy Taylor, Dissuasive from Popery, § 8.*

Advocation. s. *Obsolete.*

1. Office or act of pleading; plea; apology.

My *advocation* is not now in tune;
My lord is not my lord; nor should I know him,
Were he in favour as in humour altered.
Shakespeare, Othello, iii. 4.

2. Like Advocate, this word has also a scriptural and sacred sense.

God comforts us by their sermons, and reproves us by their discipline, [that of the clergy,]—and heals our sicknesses by their intercession, presented to God, and united to Christ's *advocation*.—*Jeremy Taylor, Visitation of the Sick, i. 5.*

For the *advocation* of angels, that is, that they may be our advocates, we pray not; neither are you able to prove that the ministerie of defence or protection is all one with *advocation*.—*Fulke, Confutation of the Rhenish Testament, p. 826.*

Advoutr. s. [N. Fr. *advoultrier*.] Adulterer. *Obsolete.*

God wylł condempne *advoutrers* and whore-keepers.—*Bale, Yet a Course at the Romyshs Foze, fol. 70. c.*

Advoutr. s. Adulteress. *Obsolete.*

This kind of danger is to be feared chiefly when the wives have plots for the raising of their own children, or else that they be *advoutrers*.—*Bacon, Essays of Empire. (Ord MS.)*

Advoutrous. adj. Adulterous. *Obsolete.*

The fall of the *advoutrous*, cursed, and malignant church of hypocrites.—*Bale, On the Revelation.*

Advoutry. s. Adultery. *Obsolete.*

He was the most perfidious man upon the earth, and he had made a marriage compounded between an *advoutry* and a rape.—*Bacon, History of the Reign of Henry VII.*

Advowson. s. [Lat. *advocatio*, -onis = *advocacy*.] Right of perpetual presentation to a benefice; patronage in the sense of *Jus patronatus*.

The right of *advowson*, or of presenting a clerk to the bishop, as often as a church becomes vacant, was first gained by such as were founders, benefactors, or maintainers of the church. For although the nomination of fit persons to officiate was originally in the bishop, yet when lords of manors were willing to build churches, and endow them with manse and glebe, the bishops were content to let the lords have the nomination of persons to the churches so built and endowed by them. They were called '*advocati*' and '*patroni*,' because they were bound to protect and defend the rights of the church, and their clerk, from oppression and violence.—*Burn, Ecclesiastical Law, in voce.*

[The protection of the church naturally drew with it certain rights and emoluments on the part of the protector, including the right of presentation to the benefice itself; and the *advocatio*, or office of *advocate*, instead of being an elective trust, became a heritable property. *Advocatus* became in O. Fr. *advoue*, whence in the old Law language of England, *advouee*, the person entitled to the presentation of a benefice, and *advowson*, from O. Fr. *advowson*, *advowson*, the right itself. As it was part of the duty of the guardian or protector to act as *patronus*, or to plead the cause of the church in suits at law, the *advouee* was also called *patron* of the living, the name which has finally prevailed at the present day.—*Wedgwood, Dictionary of English Etymology.*]

Adz, or Adze. s. See *Addis*.

Æ. The sound of this combination of strokes is that of the *ee* in *eel*.

It can scarcely be called a *letter*, inasmuch as it is not only made out of A and E, as far as its form goes, but is often treated as if it were a real equivalent of the two. In all the previous editions of the present dictionary it stands as *Æ*: indeed so thoroughly is it treated as two letters that though *Ænigma* precedes *Ærial*, *Æthiops* mineral follows; in other words, *Æ*, a single letter constituting a single syllable, is treated as if it were A + E, two separate letters forming two separate syllables.

Neither is it a *compendium*, like *æ*; which stands for *ks*, or *gz*: inasmuch as *æ* is, in respect to its form, a separate letter, rather than a letter arising out of the combination of two others.

Neither is it a *diphthong*, i.e. a sound like the *oi* in *oil*, and others in which two sounds are combined. Its sound, as has just been stated, is simply that of the *ee* in *eel*.

Still less is it what it is generally called, viz. *e* diphthong: since it is *a* followed by *e*, rather than *e* preceded by *a*.

In A.S. the letter was one of the very commonest occurrence, both at the beginning or end, and in the middle of words. Yet it seems to have had no diphthongal power; even as it has none at present. Sometimes it was the equivalent to *a*, sometimes to *e*. This is not a matter of inference from the present sound of the words wherein it occurs, but one from the interchanges of the Saxon orthography itself. Thus, amongst the numerous words beginning with *æ* we find the double spelling *æce* and *ace* for *ache*; and the double spelling *æbban* and *ebban*, for *ebb*. So in the middle of words, *bæc* and *bac* = back, and *bæd* = bed.

But, although *æ* belonged to the Anglo-Saxon alphabet, in which it was an important element, the *æ* of the present English is *not* of Anglo-Saxon origin.

The Anglo-Saxon *æ* is sometimes represented an *ae* with the two letters written separately, sometimes a simple *e*.

The free use of it is held, and that on good grounds, to be a characteristic of the Northumbrian dialect, as opposed to the West-Saxon. It is also held to be a sign of antiquity, when used as the termination of an oblique case. The Anglo-Saxon inscription on the Ruthwell cross, as deciphered by Mr. Kemble, runs thus:

Riiknæ kyningk
Hifunæs hlafard,
Hælda ic ne deærste.

Mid stralum giwundæd,
Alegdun hie hine,

Krist was on rōdi;
Hwæðræ! ther fūse
Færran cwmu
Æððilæ ti lenuum.

Which in ordinary West-Saxon would be:

Ricena cuning
Heofonæs hlafard,
Hældan ic ne deærste.

Mid stralum giwundod,
Alegdun hie hine,

Krist was on rode;
Hwæðre! ther fūse
Færron cūmon
Æðele ti lenuum.

In English:

The powerful King,
The Lord of Heaven,
I dared not hold.

Wounded with shafts,
They laid him down,

Christ was on the cross.
Lo! there with speed
From afar came
Nobles to him

In the following, from a MS. at St. Gallen, the two vowels are written in full. The fragment is well known as the *Death-bed Verses of the venerable Bede*, and passes for a good specimen of the Northumbrian Anglo-Saxon:

Fore the niedfaerae,
Naenig uuiurthit
Thoc-snotturra
Than him thaef sio
To ymbhyccanne,
Aer his hlonongae,
Huaet, his gastae,
Godæes aethlha yllaes,
Efter deothdaege,
Doemid uuiorthae.

In English:

Before the necessary journey,

No one is
Wiser of thought
Than he hath need
To consider,
Before his departure,
What, for his spirit,
Of good or evil,
After the death-day,
Shall be deemed.

In the Danish, *æ* has the sound of the *a* in *fate*. In Swedish, this is *ä*; and in German *ä*, or *ä*. All this shows that it was as a modification of *a* rather than an *e* diphthong (so called), that it came into the German class of languages.

With this we may easily understand what Johnson says of the sign in question:

'Æ, or Æ. — A diphthong of very frequent use in the Latin language, which seems not properly to have any place in the English; since the *æ* of the Saxons has been long out of use, being changed to *e* simple, to which, in words frequently occurring, the *æ* of the Romans is, in the same manner, altered, as in *equator*, *equinoctial*, and even in *Æneas*.'

As this edition, with the exception of the present notice, ignores the sign in question, the preceding extract is adduced to show that it was not very willingly recognized by Johnson.

The difference between the Latin and the Anglo-Saxon *æ* he did recognize. The Latin *æ* itself is not used for words of Latin origin. It is the representative of the Greek *αι*. Thus *Æacus* = *Αἰακος*, &c. Hence, its application in English is limited to words of Greek origin introduced into English through the Latin.

Finally, it should be remarked that we have a good measure of the extent to which we ignore the claims of the Greek orthography to be represented in the English spelling, in the way by which *k* is represented. As a general rule, we represent it by *c*, a letter strange to the Greek alphabet, wherever we can do so with impunity, i.e. whenever there is no chance of *c* being sounded as *s*. In many cases we use it where such a chance exists; the effect being, that in more than one word of true Greek origin its power is wholly lost. It is so lost in the word *ascetic*, generally pronounced *assetic*. With this latitude in one quarter, it is not too much to claim an equal amount in another.

Of the words which in the previous editions begin with it, the number is eight, of which *Æl* and *Ælf* are only hypothetically or partially words at all. They have no independent existence; they find their place, however, as the initial elements of certain Anglo-Saxon compound proper names. The first is said to mean *all*, the second *help*; this latter statement being, as a matter of fact, inaccurate. No objection, then, lies to the elimination of these two terms. Of the six others, *Æglogue* (wherein the *que* shows a French influence, and of which even the origin in any word containing *ai* is doubtful) and *Enigma* are considered to begin with *E*, and to be spelt *Eclogue* and *Enigma*. Three, *Ægilops*, *Ægyptiacum*, and *Æthiops mineral*, are none of them true English words; whilst *Ætites*, the sixth, is even less so, besides which it comes from *αἰτός* with *ε*.

Such are the reasons against the use of *æ* when it is initial. But it by no means follows that because it may be omitted at the beginning of words it may also be omitted in other places. At the end, however, it nowhere occurs. If it did, there would be a reason, as far as it went, in favour of retaining it. It might be kept *ob*

differentiam, in order to distinguish it from an *e* mute. But, as aforesaid, it is nowhere final.

In the middle of a word it may occur on an accented, or an unaccented syllable. In an unaccented it is rare, and generally replaced by *e*. This is the case with four words newly coined for geological purposes, which, whether good or bad, have kept their ground — *pleistocene*, *pleiocene*, *miocene*, and *eocene*, which are seldom, if ever, spelt with *æ*, though derived from *καινός*. Their direct origin from the Greek can scarcely be taken as the reason for this. It rather lies in their want of accent, which carries with it the notion of *shortness*, to which the use of the diphthong is unfavourable.

The case that now stands over is that where the syllable that contains it is other than initial, and at the same time accented. That diphthongs are long rather than short, and that length in the way of quantity is often confounded with accent, are reasons for favouring its continuance. At any rate many who have no hesitation in writing *enigma*, scruple to write *encyclopedia*. It is submitted, however, that the rule be thoroughgoing.

Such are the minutiae of the application of a rule, which, though valid, has not an absolutely uniform operation. To the lexicographer the use of an initial *æ* is a stumbling-block. It is not a compendium; and yet, if treated as a letter, it is one which has no place in the alphabet. In this respect it differs from *y*; with which, in many cases, it agrees. Both are Latin characters for sounds of Greek origin; *y*, however, is a recognised letter.

With *æ*, as in *Crasus*, it does agree; and it is scarcely an anticipation of the question to state that what applies to *æ* applies to *æ* also.

Two other points still stand over. Are these two letters to be ejected from proper names? The lexicographer who deals with common names only, is not called upon to answer this question. All he is called upon to do is, to give his reasons for extending the form of spelling which gives *enigma*, *era*, and *eclogue* as far as he conveniently can. He extends a precedent rather than establishes an abstract principle.

With words directly from the Greek, words like the Anglicized form of *αιτιολογία*, what is the rule? As they never came through the Latin at all, the principle hitherto investigated does not touch them. If there were any chance of its being pronounced *aitiology* it might be well to write them so. But the sound of *ai* is uncommon in English. It is sounded as if written *etiology*. Whether they should be so written gives a conflict of difficulties. For *aitiology* no case can be made out except by the fiction that it came through the Latin; a fiction which has but little to recommend it.

The rule then is as follows:— If the word be Greek write *ai*, *ai*; if Latin, *æ*; if English, *e*; *ai* being no English combination, and *æ* no English letter.

Esthetics, unless we derive from the German *Aesthetik*, is in the same category with *Etiology*. If spelt with an *Æ* it would be one of less than half-a-dozen words. For these it is scarcely necessary to keep a special letter.

Aerate. *v. a.* Bring under the action of the oxygen of the air; oxygenize.

Not the quantity only, but also the condition of the blood passing through the nervous system, influences the mental manifestations. The arterial currents must be duly *aerated*, to produce the normal amount of cerebration. At the one extreme, we find that if the blood is not allowed to exchange its carbonic acid for oxygen, there results asphyxia, with its accompanying stoppage of ideas and feelings. While, at the other extreme, we find that by the inspiration of nitrous oxide, there is produced an excessive, and indeed irrepressible, nervous activity.—*Herbert Spencer, Principles of Psychology.*

Aerating. *part. adj.* Effecting aeration.

Now anything which causes a sudden agitation of the *aerating* and nutritive fluids diffused through this lax tissue, will produce a sudden accession of vital activity in all the components of the tissue.—*Herbert Spencer, Principles of Psychology*, pt. iii. ch. viii.

Aération. *s.* Oxygenization.

In virtue of its position, the surface may be regarded as necessarily assuming the duties of absorption.—the taking in of water, and nutriment, and oxygen. And when, by the involution of the surface, a stomach comes to be formed, the change may be understood as a further separation of duties, such that nutrition is chiefly confined to one part of the lining membrane, and *aération* to another.—*Herbert Spencer, Principles of Psychology*, pt. iv. ch. i.

The extensive vascular surfaces of the corium and of the body-sac, exposed to the sea-water, with the active cirri themselves, most probably suffice for the *aération* of the blood; and the additional expansion of surface, afforded by the plicated tubular appendages to the body of the Otio, concurs to effect the same end.—*Owen, Lectures on Comparative Anatomy*, lect. xiii.

Aërial. *adj.* [Lat. *aër* = atmosphere.]

1. Of the nature of air.

The notion of the fermentation of fluids, and of the *aërial* product thence resulting, to which he gave the name of Gas, forms an important part of his doctrines; and of the six digestions which he assumes, the first prepares an acid, which is neutralized by the gall when it reaches the duodenum, and this constitutes the second digestion.—*Whewell, History of Scientific Ideas*, b. ix. ch. i. sect. 2.

2. Belonging to, produced by, inhabiting, or placed in, the air.

From all that can with fins or feathers fly,
Through the *aërial* or the wat'ry sky. *Prior.*
I gathered the thickness of the air, or *aërial* interval, of the glasses at that ring.—*Sir I. Newton, Opticks.*

Vegetables abound more with *aërial* particles, than animal substances.—*Arbuthnot, On the Nature and Choice of Aliments.*

The gifts of heav'n my foll'wing song pursues,
Aërial honey and ambrosial dews. *Dryden, Virgil's Georgics.*

Where those immortal shapes
Of bright *aërial* spirits live insper'd,
In regions mild, of calm and serene air. *Milton, Comus, 2.*

Aërial animals may be subdivided into birds and flies.—*Locke.*

Here subterranean works and cities see,
There towns *aërial* on the waving tree. *Pope, Essay on Man.*

3 Moving in or through the air.

The notions entertained by the ancients respecting the composition of the world might have suggested important hints for realising the scheme of *aërial* navigation. Influenced by the same views, other authors, and particularly the famous Cardan, have proposed for *aërial* ascents to apply fire, acting as a rocket. . . . The sun had just set, and the night was beginning to close; but M. Charles formed the resolution of making alone another *aërial* excursion.—*Encyclopædia Britannica, v. Aeronautics.*

4 Through the air.

Aërial perspective chiefly represents the colours of objects, whose force and lustre it diminishes more or less to make them appear as if more or less remote. It is founded on this, that the longer the column of air an object is seen through, the more feebly do the visual rays emitted from it affect the eye.—*Pantologia, in voce.*

5 High; elevated in situation.

A spacious city stood, with firmest walls,
Sure mounted, and with numerous turrets crown'd,
Aërial spires, and citadels the seat
Of kings and heroes resolute in war. *J. Philips.*
For that sweet incense rose and never fail'd,
And, while day sank or mounted higher,
The light *aërial* gallery, golden-rail'd,
Burnt like a fringe of fire. *Tennyson, Palace of Art.*

6 Ethereal.

Some music is above me; most music is beneath me. I like Beethoven and Mozart—or else some of the *aërial* compositions of the elder Italians, as

Palestrina and Chrissini, and I love Purcell.—*Cole-ridge, Table Talk.*

Aërially. *adv.* In an aerial manner.

Your hair is darker, and your eyes
Touch'd with a somewhat darker hue,
And less *aërially* blue;
But ever trembling thro' the dew
Of dainty-woeful sympathies. *Tennyson, Margaret.*

Aërie, or Aëry. *s.* Same as Ery.

1. Egger, or collection of eggs; nest.

You, M. Garnet, out of your anointed influence of superabundant grace, endeavoured your best and uttermost to bruise the very nest-egg of this royal and high-flying *aërie*, if it had been possible.—*Lord Northampton, Proceedings against Garnet, &c. Sign. Dd. 3.*

One *aëry*, with proportion, ne'er discloses
The eagle and the wren. *Massinger, Maid of Honour.*

2. Occupant of a nest: (the true meaning of the word being misunderstood).

Your *aëry* buildeth in our *aëry*'s nest.
Shakespeare, Richard III. i. 3.

Aëriferous. *adj.* Conveying air.

The *aëriferous* tubes in insects are called 'tracheæ,' having their parietes strengthened by an elastic cartilaginous filament, not indeed disposed in a series of distinct rings, but in a continuous close spiral coil. By this structure the most delicate and invisible ramifications of the air-tubes may be easily recognised under the microscope. The spiral filament is situated between the external cellular and an internal delicate epithelial lining.—*Owen, Lectures on Comparative Anatomy*, lect. xvii.

Aëriiform. *adj.* Resembling air.

An elastic *aëriiform* fluid, or gas, is a peculiar combination of fire with a given substance.—*Adams.* These differences Prof. Tyndall regards as due to the different abilities of the different atoms to take up, in the increase of their own undulations, those undulations of the ethereal medium which constitute heat—an interpretation in perfect accordance with the late results of spectrum-analysis; which go to show that the various elementary atoms, when in an *aëriiform* state, intercept those luminiferous vibrations of the ether which are in unison or harmony with their own.—*Herbert Spencer, Principles of Psychology*, ch. xii. § 103.

Aërography. *s.* [Gr. *ἀήρ* = air, *γράφω* = describe.] Description of the air.

Aërography. A description of the air or atmosphere, its limits, properties, &c., amounting to much the same as *aerology*, unless the latter be confined to the theory, and the former to the description.—*Pantologia, in voce.*

Aërolite. *s.* [Gr. *ἀήρ* = air, *λίθος* = stone.] Meteoric mineral mass.

How different are the very malleable masses of iron from Hradschina, . . . all of which contain 96 per cent of iron, from *aërolite* of Sienna, which scarcely contains two per cent of iron. . . . The greatest heat of our own porcelain furnaces can produce nothing similar to the crust of the *aërolite*, so distinctly and sharply separated from the unaltered mass beneath.—*Humboldt, Cosmos, Sabine's Translation*, i. 119, 120.

Aërology. *s.* See Aerography.

Aërometry. *s.* [Gr. *ἀήρ* = air, *μετρέω* = measure.] Measurement of the air; pneumatics.

Pneumatics is certainly a sister of Hydrostatics; the one considering air in the same manner as the other does water. Wolfius, in lieu of pneumatic, uses the word *aërometry*, q. d. the art of measuring the air.—*Encyclopædia Londinensis, v. Pneumatics.*

Aëronaut. *s.* One who sails through the air: (i. e. with a balloon).

Let us be satisfied to admire, rather than attempt to follow, the *aëronauts* of France.—*Burke.* The *aëronauts*, at the head of whom was the celebrated Guyton-Morveau, mounted twice in the course of that day; and continued about four hours each time, hovering in the rear of the army, at an altitude of about 1,300 feet.—*Encyclopædia Londinensis, v. Pneumatics.*

Aëronautics. *s.* Science and art of navigating the air.

The theory of *aëronautics*, considered in its detail, includes three things; first, the power of a balloon to rise through the air; second, the velocity of its ascent; and third, the stability of its suspension at any given height in the atmosphere. The practice of *aëronautics* has not realized those expectations of benefit to mankind which sanguine projectors were, at first, disposed to entertain.—*Encyclopædia Londinensis, v. Pneumatics.*

Aërostat. *s.* Aerostatic machine. See Aerostation, 2.

Aërostatic. *adj.* Appertaining to Aerostation. See for example that word, 2.

Aerostation. *s.*

1. Static portion of pneumatics.

The general principles of *aerostation* are so little different from those of hydrostatics, that it may seem superfluous to insist more upon them.—*Adams.*

2. Same as Aeronautics.

Aerostation signifies aerial navigation, or the art of navigating the atmosphere. Hence the machines which are employed for this purpose are called *aerostats*, or *aerostatic* machines; and, from their globular shape, air-balloons. Upon this principle depends the whole theory of *aerostation*.—*Encyclopædia Londinensis, v. Pneumatics.*

Afar. *adv.* [A.S. on *feorran*.] See Far.

1. At a great distance.

So shaken as we are, so wan with care,
Find we a time for frightened peace to pant,
And breathe short-winded accents of new broils,
To be commenced in strands *afar* remote? *Shakespeare, Henry IV. Part I. i. 1.*

We hear better when we hold our breath than contrary; inasmuch as in listening to attain a sound *afar* off, men hold their breath.—*Bacon, Natural History*, no. 284.

2. To or from a great distance.

Hector hastened to relieve his boy;
Dismiss'd his burnish'd helm that shone *afar*,
The pride of warriors and the pomp of war. *Dryden.*

With from.

The rough Vulturinus, furious in its course,
With rapid streams divides the fruitful grounds,
And from *afar* in hollow murmur sounds. *Addison, Travels in Italy.*

With off.

Much suspecting his secret ends, he entertained a treaty of peace with France, but secretly and *afar* off, and to be governed as occasions should vary.—*Sir J. Hayward.*

Afear'd. *part. adj.* Frighted; terrified; afraid. *Obsolete.*

He loudly bray'd, that like was never heard
And from his wide devouring oven sent
A flake of fire, that, flashing in his beard,
Him all amaz'd, and almost made afraid. *Spenser, Faerie Queen.*

But tell me, Hal, art thou not horribly *afear'd*?
Thou being heir apparent, could the world pick thee
out three such enemies again? *Shakespeare, Henry IV. Part I. ii. 4.*

With of.

Fear is described by Spenser to ride in armour, at the clashing whereof he looks *afear'd* of himself.—*Peacham.*

Affability. *s.* Quality of being affable; condescension.

Her *affability* and bashful modesty,
Her wondrous qualities, and mild behaviour. *Shakespeare, Twelfth Night, ii. 1.*
All instances of charity, sweetness of conversation, *affability*, admonition, all significations of tenderness, care, and watchfulness, must be expressed towards children.—*Jeremy Taylor.*

Yet answer *affably* and modestly.
Beaumont and Fletcher, Martial Maid, iii. 4.

Affabulation. *s.* Moral of a tale, or story, or fable. *Obsolete.*

As an *affabulation* to the epilogue.—*Archdeacon Arnway, Tablet of Moderation*, &c. p. 75: 1861.

He calls heaven and earth to be witness of his utter detestation of those errors which are mal-

ciously *affined* to him.—*Bishop Hall, Christian Moderation*. (Rich.)

duced to any certain account.—*Dr. H. More, Gov-
ernment of the Tongue*.

Afresch. adv. Anew; again, after intermission.

Aft. adv. [root of *after*.] In Navigation.

He [Nelson] returned a practical seaman, but with a hatred of the king's service, and a saying then common among the sailors 'Aft the most honour; forward the better man.'—*Soutley, Life of Nelson*, i. 10.

After. adv. [A.S. *æfter*.] The termination *er* is common to (1) certain pronouns, as *ei-th-er*, *u-ei-th-er*, *we-th-er*, *o-th-er*; (2) certain prepositions and adverbs, as *ov-er*, *und-er*, *af-t-er*; (3) adjectives of the comparative degree; as *wis-er*, *strong-er*, *bett-er*, &c.; (4) adjectives like *upp-er*, *und-er*, *inn-er*, *out-er*, *hind-er*. The idea at the bottom of all these forms is that of *duality*. In the comparative degree we have a relation between one object and *some* other object like it, or a relation between two single elements of comparison; as *A is wiser than B*. In the superlative degree we have a relation between one object and *all* others like it, or a relation between one single and one complex element of comparison; *A is wiser than B, C, D, &c.* Over and above, however, the idea of simple comparison, there are those of (1) contrariety, as *inner*, *outer*, *under*, *upper*, *over*; and (2) choice in the way of an alternative, as *either*, *neither*, *other*, and *whether*. The *-er*, then, is no sign of the comparative degree, nor is *after* any comparative of *aft*; on the contrary, it is a sign of contrariety or opposition, its correlative being *fore*.]

1. In succeeding time.

Far be it from me, to justify the cruelties which were at first used towards them, which had their reward soon *after*.—*Bacon*.

After all. When all has been taken into the view, and there remains nothing more to be added; at last; in fine; in conclusion; upon the whole; at the most.

They have given no good proof in asserting this extravagant principle; for which, *after all*, they have no ground or colour, but a passage or two of scripture, miserably perverted, in opposition to many express texts.—*Bishop Atterbury, Sermons*.

But, *after all*, if they have any merit, it is to be attributed to some good old authors, whose works I study.—*Pope, On Pastoral Poetry*.

After in composition.

Most of the words which follow find a place in the present edition simply because they have been admitted into preceding ones; many of them being *two separate words in juxtaposition*, rather than true compounds.

The general principle upon which the difference between these two classes of words is determined has been sketched in the Preface. As the present word, however, stands at the head of a large class, it gives occasion to a further notice of some of the details.

The accent plays the chief part in the formation of a true compound; but the incidence of the accent itself may vary.

Time may change it. Under the combinations of the word *Black*, the compound Black-guard is treated by Johnson like Black-pudding, and placed between Black-earth and Black-lead. Nor is this apparent violation of the order unreasonable. The word was evidently treated as if sounded *bláck guárd*. But most of us say *bláckguard*, or rather *blággard*. At any rate, it stands in the present work in the same class with Blackbird.

The change of accent, however, as exhibited in difference of practice between the speakers of one generation and those of another gives us but a small part of our complications.

Poets use certain words according to the demands of the metre. Hence, whenever we find a word unusually accented in a verse, we should ask how the poet would have sounded it in prose. In the present work there are many words which the entry treats as true compounds, but for which some of the poetical examples give the accentuation of *two words*. In one page, for instance, the same writer, Byron, gives *blue-bóttle* and *blue-stócking* in the extracts where the entry gives *bluebottle* and *bluestocking*. Does anyone, however, doubt how the writer pronounced these words in prose? Does any doubt how he sounded

beef-steak. Yet in one passage he calls it *beefsteak*.

I like a *beefsteak*, too, as well as any.

Instances of this kind can easily be multiplied.

Hence, in the following entries, the accentuation (especially in cases where there are extracts in verse) must be taken as it is given in the entry itself, rather than as it may be suggested by certain quotations.

And Jacob lived in the land of Egypt seventeen years; so the whole age of Jacob was an hundred forty and seven years.—*Genesis*, xlvii. 28.

AGEN

{ AGAINST AND AGENCY

Mated with a squalid savage—what to me were sun or clime?

I the heir of all the ages, in the foremost files of time.

Tennyson, *Locksley Hall*.

When the Etruscans laid the foundation of a city, the births of the year, it was said, were carefully registered, and with the decease of the last survivor the first age of the city was supposed to terminate. In a similar way each subsequent age was calculated; but this fanciful definition of the æcælum seems to have been lost in the more natural, and at the same time, stricter notion of a fixed number of years. Whether, however, the age or century of the early Romans was a hundred or a hundred and ten of their years, or whether it was computed with reference to periods of ten or twelve months, of ordinary or intercalated years, remains a mystery.—*Méridieu*, *History of the Romans under the Empire*, xxv. p. 178.

By induction, we rise from the concrete to the abstract; by deduction, we descend from the abstract to the concrete. Accompanying this distinction, there are certain qualities of mind, which, with extremely few exceptions, characterize the age, nation, or individual, in which one of these methods is predominant.—*Buckle*, *History of Civilization in England*, ch. vi.

2. Maturity; ripeness; years of discretion; full strength of life.

Far in a wild unknown to public view,
From youth to age a reverend hermit grew.

Farnell, *The Hermit*.

4. In Law.

In a man, the age of fourteen years is the age of discretion; and twenty-one years is the full age: In a woman, at seven years of age, the lord her father may distrain his tenants for aid to marry her; at the age of nine years, she is dowable; at twelve years, she is able finally to ratify and confirm her former consent given to matrimony; at fourteen, she is enabled to receive her land into her own hands, and shall be out of ward at the death of her ancestor: at sixteen, she shall be out of ward, though, at the death of her ancestor, she was within the age of fourteen years; at twenty-one, she is able to alienate her lands and tenements. At the age of fourteen, a stripling is enameled to choose his own guardian; at the age of fourteen, a man may consent to marriage.—*Conwell*.

b. Applied to inanimate things, and commonly with some tendency to Prosopopæia.

Ágedness. s. Attribute suggested by Áged.

Nor, as his knowledge grew did's form decay;
He still was strong and fresh, his brain was gay.
Such agedness might our young ladies move

Ágen. adv. [used chiefly by the poets, in cases where the spelling with ai might lead to false pronunciation and spoil the rhyme.] Same as Again.

Borne far asunder by the tides of men,
Like adamant and steel they meet agen.

He [Polyphemus] weary sought agen
The cool retirement of his gloomy den.

Dryden, *Polyphemus and Galatea*.

For their agenda, matters of fact and discipline, their sacred and civil rites and ceremonies, we may have them authentically set down in such books as these.—*Bishop Barlow, Remains*.

What solemn humbug this modern political economy is! What is there true of the little that is true in their dogmatic books which is not a simple deduction from the moral and religious credenda and agenda of any good man, and with which we were not at all previously acquainted, and upon which every man of common sense instinctively acted? I know none.—*Coleridge, Table Talk*.

Agent. adj. Acting: (opposed to patient, or acted upon).

This success is oft truly ascribed unto the force of imagination upon the body agent; and then, by a secondary means, it may upon a diverse body; as, for example, if a man carry a ring, or some part of a beast, believing strongly that it will help him to obtain his love, it may make him more industrious, and again more confident and persisting than otherwise he would be.—*Bacon, Natural History*.

Agent. s.

1. One who acts; one who, or that which, possesses the faculty of action.

Where there is no doubt, deliberation is not excluded as impertinent unto the thing, but as needless in regard of the agent, which seeth already what to resolve upon.—*Hooker*.

Thus far as to the way in which the great civilizations exterior to Europe have been affected by the peculiarities of their food, climate, and soil. It now remains for me to examine the effect of those other physical agents to which I have given the collective name of Aspects of Nature, and which will be found suggestive of some very wide and comprehensive inquiries into the influence exercised by the external world in predisposing men to certain habits of thought, and thus giving a particular tone to religion, arts, literature, and, in a word, to all the principal manifestations of the human mind.—*Buckle, History of Civilization in England*, ch. i.

A great number of living and thinking particles could not possibly, by their mutual contact, and pressing, and striking, compose one greater individual animal, with one mind and understanding, and a vital consension of the whole body; any more than a swarm of bees, or a crowd of men and women, can be conceived to make up one particular living creature, compounded and constituted of the *aggregate* of them all.—*Bentley*.

Where the movement is very involved, and especially where it is that of some *aggregate* whose units are partially independent, anything like a regular curve is no longer traceable: we see nothing more than a general oscillation.—*Herbert Spencer, Principles of Psychology*, pt. i. ch. iii.

And I will not contest the positions, that the being of the Church depends upon certain gifts, and the conveyance of these gifts upon the ministerial succession; that, therefore, any *aggregation* of men cannot, of their own will, make and unmake a Christian Church: hence, that it is in vain for us to argue from that national identity, which survives political revolutions whether they be founded in right or in injustice, and proves that the abrogation of an old government and the substitution of a new one do not break the actual continuity of the collective life.—*Gladstone, The State in its Relations with the Church*, ch. vii.

Albany, backed by the Church, marched into his territories, in 1411, forced him to renounce the earldom, to make personal submission, and to give hostages for his future conduct. So vigorous a proceeding on the part of the executive was extremely unusual in Scotland; and it was the first of a series of *aggressions*, which ended in the Crown obtaining for itself, not only Ross, but also the Western Isles.—*Buckle, History of Civilization in England*, ch. iii.

Shut up by the sea with the people whom they had hitherto oppressed and despised, they gradually came to regard England as their country, and the English as their countrymen. The two races, so long hostile, soon found that they had common interests and common enemies. Both were alike *aggríevd* by the tyranny of a bad king. Both were alike indignant at the favour shown by the court to the natives of Poitou and Aquitaine.—*Macaulay, History of England*, ch. i.

Mathematicians have felt *aggríevd* because they often hear those who are called 'sensible men,' 'educated men,' and the like, asserting that they do not doubt of 'runs of luck;' speaking in a tone which implies that the occurrence of such tides of success or adversity are occasioned by an unknown or mysterious cause.—*Sir F. Palgrave, History of England and Normandy*, i. 137.

With terror of that blast,
Shall from the surface to the centre shake.

Agist. *v. a.* The meaning of this word is conveyed in the extract.

To take in and feed the cattle of strangers in the king's forest, and to gather the money. The officers that do this, are called Agistors, in English 'guest or gist takers.' Their function is termed Agistment; as, 'agistment upon the sea banks.' This word *agist* is also used for the taking in of other men's cattle into any man's ground, at a certain rate per week.—*Blount*.

Agistment. s. [L. Lat. *aggestamentum* or *aggestiamentum* = embankment. If this be the etymology, the sense of feeding must have grown out of that of the fence by which the feeding-ground was defined. For another derivation see extract.] Feeding of cattle at a stipulated price.

If a man takes in a horse or other cattle to graze, and depasture his grounds, which the law calls *agistment*, he takes them upon an implied contract to return them safe to the owner.—*Sir W. Blackstone*. [*Agistment*.—From Lat. *jacere*, to lie; the French had *gésir*, to lie; whence *giste*, a lodging, place to lie down in; *giste d'une lievre*, the form of a hare. The battle of Agincourt, the conquest and reconquest of France, called off the attention of the people; while the rise of the Lollards, and the intrusion of speculative questions, the agitation of which has ever been the chief aversion of English statesmen, contributed to change the current; and the reforming spirit must have lulled before the outbreak of the Wars of the Roses, or one of the two parties in so desperate a struggle would have scarcely failed to have availed themselves of it.—*Froude, History of England*, ch. ii.

Agitator. s. One who promotes a cause by creating or keeping up excitement.

He must be very ignorant of the state of every popular interest, who does not know that in all the corporations, all the open boroughs, indeed in every district in the kingdom, there is some leading man, some agitator, some wealthy merchant or considerable manufacturer, some active attorney, some popular preacher, some money-lender, &c. who is followed by the whole flock.—*Burke, Speech on the Duration of Parliaments*.

Yes, history will prove Shakespeare's aphorism that 'There's magic in a name,' especially for the working of evil. The political agitators who give nicknames are guided by this aphorism.—*Agnes Strickland, Lives of the Queens of England, Henrietta Maria*.

With special reference to certain commissioners, or functionaries, in the Parliamentary army.

The fairest day is seldom without a cloud, for at this time some active and malevolent persons of the army, disguised under the specious name of agitators, being too selected out of every regiment to meet and debate the concerns of the army, met frequently at Putney.—*Sir T. Herbert, Memoirs*.

Blackstone, Law of Descents*.

Our bards hold agnominations, and enforcing of consonant words or syllables one upon the other, to be the greatest elegance: as for example, in Welsh, 'Tewgeis, todyrri, ty'r deryn, gwilt, &c.' So have I seen divers old rhymes in Italian running so: 'Donne, o danno, che felo affronto affronta.' In selva salvo a me: Più caro cuore, &c.—*Howell, Letters*, i. 1. 40.

Of courage and endurance they have shewn enough; but, if either the one or the other be a fair sample of the ordinary Kosak deportment, no amount of sentiment can make us regret that the strong hand of arbitrary power has reduced the men whom the foregoing sketches exhibit to the humble condition of ordinary *agriculturalists*.—*Dr. R. 2. Bladder in fishes, by the contraction and dilatation of which they vary the proportions of their weight to their bulk, and thus rise or fall.

Though the *air-bladder* in fishes seems necessary for swimming, yet some are so formed as to swim without it.—*Cudworth*.

The proper walls of the *air-bladder* of ordinary osseous fishes consist of a shining silvery fibrous tunic, the fibres being arranged for the most part transversely or circularly, and in two layers; they are contractile and elastic; but the wall of the anterior compartment of the *air-bladder* of Cyprinoids are much more elastic than those of the posterior one. The *air-bladder* is lined by a delicate mucous membrane; it is more or less covered by the peritoneum. Its cavity is commonly simple; in the Seah-fish it is divided by a vertical longitudinal septum along three-fourths of its posterior part. The lateral compartments are subdivided by transverse septa in many other Silurids: the large *air-bladder* of some species of Erythrinus is partially subdivided into smaller cells. The cellular subdivision is such in the *air-bladder* of the Amia, that Cuvier compared it to the lung of a reptile; and the transition from the air or swim-bladder to the lung is completed in the Protopterus or Lepidosiren annectens.—*Owen, Lectures on the Comparative Anatomy, &c., of Vertebrate Animals*, pt. i. lect. xi.

Air-bone. s. Bone with the cavity filled with air.

Thus, in the long bones, the cavities analogous to those called medullary in beasts are more capacious, and their walls are much thinner: a large aperture called the pneumatic foramen, near one end of the bone, communicates with its interior; and an *air-cell*, or prolongation of the lung, is continued into and lines the cavity of the bone, which is thus filled with rarefied air instead of marrow. The extremities of such *air-bones* present a light open network, slender columns shooting across in different directions from wall to wall, and these little columns are likewise hollow.—*Owen, Anatomy of Vertebrates*, ch. i. § 12.

Air-born. adj. Born of the air.

And see the *air-born* racers start,
Impatient of the rein. —*Congreve, To Lord Godolphin*.

Air-breathing. part. adj. Breathing air.

In *air-breathing* creatures there is a tenable division between the two; the one taking cognizance of matters suspended in air; and the other of matters suspended in water.—*Herbert Spencer, First Principles*, § 105.

At the first introduction into the animal kingdom of a true lung, or *air-breathing* organ communicating with pharynx or oesophagus, much variety of form and structure, much inconstancy even as to existence, might be expected, especially in that class in which the normal function of the new organ could be so seldom in any degree exercised, and in which, therefore, different accessory or subordinate offices predominate in such rudimentary representative of the pulmonary organ.—*Owen, Lectures on the Comparative Anatomy, &c., of Vertebrate Animals*, pt. i. lect. xi.

Air-built. adj. Built in the air, without any solid foundation.

Hence the fool's paradise, the statesman's scheme, The *air-built* castle, and the golden dream,
The maid's romantick wish, the chymist's flame,
And poet's vision of eternal fame. —*Pope, Dunciad*, iii.

Air-cell. s. In Physiology. Cell for air.

The bones of birds, especially those of flight, present the opposite extreme of lightness. Thus, in the long-bones, the cavities, analogous to the medullary in mammals, are more extensive, and the solid walls of the bone much thinner; a large aperture called the foramen pneumaticum, near one or both ends of the bone, communicates with its interior, and an *air-cell* or prolongation of the lung is continued into and lines the cavity of the bone, which is thus filled with rarefied air instead of marrow. The vastly expanded beak, with its hornlike process, in the

Hornbill forms one great *air-cell*, with thin bony parietes; and in this bird, in the Swifts, and the Humming-birds, every bone of the skeleton, down to the phalanges of the claws, is pneumatic.—*Owen, Lectures on the Comparative Anatomy, &c., of Vertebrate Animals*, pt. i. lect. ii.

The most remarkable development of *air-cells* in the mammalian class is, however, presented by the Elephant; the intellectual physiognomy of this great Pachyderm being caused, as in the Owl, not by actual capacity of the brain-case, but by the enormous extent of the pneumatic cellular diploë between the two tables of the skull.—*Id.*

Of these, the most important are, the true nature of the circulation in crustacea and insects; the organ of hearing in cephalopods; the power possessed by mollusks of absorbing their shells; the fact that bees do not collect wax, but secrete it; the semicircular canals of the cetacea; the lymphatics of birds; and the *air-cells* in the bones of birds.—*Buckle, History of Civilization in England*, vol. ii. ch. v.

Air-chamber. s. Cavity for air; large air-cell.

The outer table of the entire epicranium is similarly raised above the inner one by intervening large *air-cells*, and their sinuous septa, in the Giraffe; the short horns are solid, but are sustained by the vaulted roof of the skull; and, as the animal can deal heavy blows with these simple weapons, the concussion is diminished by the interposition of these *air-chambers* between the outer table and the immediate covering of the brain.—*Owen, Lectures on the Comparative Anatomy, &c., of Vertebrate Animals*, pt. i. lect. ii.

Air-drawn. adj. Drawn or painted in air.

This is the very painting of your fear,
This is the *air-drawn* dagger, which, you said,
Led you to Duncan. —*Shakespeare, Macbeth*, iii. 4.

Air-gun. s. Gun charged with air instead of powder.

The small birds, or those under the size of a thrush, are best brought down by an *air-gun*; by the use of which you may preserve their plumage in its full perfection.—*Taxidermy*.

Air-poise. s. Instrument to measure the weight of the air.

Mr. Hooke had read in the minutes of the last meeting, that he had contrived a barometer, by which an infinite number of small mutations of the air might be discovered, which would be wholly invisible and insensible by the more common *airpoises*. —*Bishop Sprat, History of the Royal Society*, iii. 363.

Air-pump. s. Machine for effecting a vacuum by pumping out the air.

The air that, in exhausted receivers of *air-pumps*, is exhaled from minerals, and flesh, and fruits, and liquors, is as true and genuine as to elasticity and density, or rarefaction, as that we respire in; and yet this factitious air is so far from being fit to be breathed in, that it kills animals in a moment, even sooner than the absence of air, or a vacuum itself.—*Bentley*.

Pascal and Boyle brought into clear view the fundamental laws of fluid equilibrium; Boyle and Mariotte determined the law of the compression of air as regulated by its elasticity. Otto Guericke invented the *air-pump*, and by his 'Magdeburg Experiments' on a vacuum, illustrated still further the effects of the air. Guericke pursued what Gilbert had begun, the observation of electrical phenomena; and these two physicists made an important step, by detecting repulsion as well as attraction in these phenomena.—*Whewell, History of Scientific Ideas*, b. v. ch. i.

Air-shaft. s. Passage for the air into the mines and subterraneous places.

By the sinking of an *airshaft*, the air hath liberty to circulate, and carry out the steams both of the miners breath and the damps, which would otherwise stagnate there.—*Ray*.

Airiness. s. Lightness; gaiety; levity.

The French have indeed taken worthy pains to make classic learning speak their language; if they have not succeeded, it must be imputed to a certain talkativeness and *airiness* represented in their tongue, which will never agree with the sedateness of the Romans, or the solemnity of the Greeks.—*Felton*.

Airing. s. Short journey or ramble to enjoy the free air.

This little fleet serves only to fetch them wine and

A I R L

Ake. *v. n.* [see Ache, of which, in the way of spelling, the present word is the better form. Whether the word came from the Greek *ἀχος* or not, in respect to its ultimate origin, it is so old that it must be treated as Anglo-Saxon, to which language the combination *ch* was a stranger. Added to this, the practice of sounding it *aitsh*, which cannot be shown ever to have

A L A C

been *general*, is now absolutely extinct; except in such declamation as affects an archaic character. Finally, let it be observed that the *authorities* for the *k* are Locke, Prior, Addison, and South.]

I cannot forbear mentioning part of an *alabaster* column, found in the ruins of Livia's portico. It is of the colour of fire, and may be seen over the high altar of St. Maria in Campitello; for they have cut it into two pieces and fixed it, in the shape of a cross, in a hole of the wall; so that the light passing through it makes it look, to those in the church, like a huge transparent cross of amber.—*Addison, Travels in Italy*.

well-known debates in Parliament, and in an unfeel-
ing and insulting manner, not only renounced the
party, but also abjured the friendship of Mr. Fox;
and, from time to time, not content with condemn-

and sometimes, too, by open and calumnious charges.

He, who has a probable belief that he shall meet
with thieves in such a road, thinks himself to have
reason enough to decline it, *albéit* he is sure to sus-
tain some loss, though yet considerable, inconve-
nience by his so doing.—South, *Sermons*.

Here, then, we have a combination which many
readers will still consider with favour, and which, at
the time it occurred, excited the admiration, *albéit*
the terror, of Europe.—Buckle, *History of Civiliza-*
tion in England.

When hither to inhabit first we came,
These mountains, *albéit* that they are obscure,
As you perceive, yet without fear or blame
They seem'd to promise an asylum sure.

Byron, *Morgan's Maggiore*, 23.

- Álbicore.** *s.* [?] *Thynnus Pelamis*: (a sea-fish of the Tunny kind).

The *albicore*, that followeth night and day
The flying-fish, and takes them for his prey.

Davors, *Secrets of Angling*, ii.

- Albification.** *s.* Process making anything white.

Our lampes burning bothe night and day,
To bring about our craffe if that we may:
Our fournes eke of calcination,
And of waters *albification*.

Chaucer, *Canterbury Tales*, *Yeoman's Tale*

- Albinism.** *s.* Condition of an albino.

Everyone must have heard of cases of *albinism*
prickly skin, hairy bodies, &c. appearing in several
members of the same family.—Darwin, *Origin of*
Species, ch. i. p. 13.

- Albino.** *s.* [Portuguese.] Man, woman, or lower animal, with a deficiency of the natural pigment of the eye and hair.

The Cingalese vary in colour from light brown to
black; the prevalent hue of their hair and eyes is
black, but hazel eyes and brown hair not uncom-
mon; grey eyes and red hair are occasionally seen,
though rarely; and sometimes the light blue or red
eye, and light flaxen hair of the *albino*.—Dr. Davy
On Ceylon.

The buffalo, like the elk, is sometimes found in
Ceylon as an *albino*, with purely white hair and
pink iris.—Sir J. B. Tennent, *Ceylon*, pt. ii. ch. i.

- Albugineous.** *adj.* Resembling the white of an egg.

Eggs will freeze in the *albugineous* part thereof.—
Sir T. Browne, *Vulgar Errors*.

I opened it by incision, giving vent first to an
albugineous, then to white concocted matter; upon
which the tumour sunk.—Wiseman, *Surgery*.

- Álbum.** *s.* [Lat. *album*, neut. of *albus* = white.] Blank book for autographs, drawings, and manuscript compositions.

Mr. Gray went out of his way to make a second visit
to the Grand Chartreuse in Dauphiny, where he
enriched the *album* of the fathers with an *Alcaic*
ode worthy of the Augustan age, and marked with
all the finest touches of his melancholy muse.—*Life*
of Gray. (Ord MS.)

- Álbum græcum.** *s.* [Lat.] Dung of the dog, hyæna, and other animals feeding largely on bones, which is of a white or grey colour.

Album Græcum, once used as medicine in phthysic
and catarrh, as a remedy for the lungs and
throat, is now confined to the curriers, who use it
for softening leather.—*Pantologia*, in voce.

This conjecture is rendered almost certain by the
discovery I made of many small balls of the solid
calcareous excrement of an animal that had fed on
bones, resembling the substance known in the old
Materia Medica by the name of *album græcum*.—
Buckland, *Reliquiæ Diluviana*.

- Albúmen.** *s.* [Lat.] White of egg; one of the primary organic principles.

How, we may next ask, are the inorganic earthy
particles diffused through the animal basis, and
whence are they obtained? Bones are not a primi-
tive formation, but the result of a transmutation of
pre-existing tissues. The inorganic salts defined in
the foregoing tables pre-exist in the *albumen* of the
egg, in the milk which nourishes the new-born
mammal, in the plasma or 'liquor sanguinis' of the
circulating fluids.—Owen, *Lectures on the Compar-*
ative Anatomy of Vertebrate Animals, pt. i. lect. ii.

- Albúminous.** *adj.* Partaking of the nature of albumen.

The *albuminous* substances are more highly or
perfectly organic, i.e. are more different from in-
organic bodies than any of the substances yet con-
sidered, or, perhaps, any in the body. The principal
among them are albumen, fibrine, and caseine. The
last is found almost exclusively in milk. Principles
essentially similar to them all are found also in ve-
getables, especially in the sap and fruits. Albumen
exists in some of the tissues of the body. Its most
characteristic property, both in solution and in that
half-solid condition in which it exists in white of
egg, is that it is coagulable by heat, and, in thus be-
coming solid, becomes insoluble in water.—Kirk,
Handbook of Physiology, ch. ii.

- Alcáic.** *adj.* Appertaining to the metre named after **Alcaeus**.

There is the smaller *Alcaic* verse with a molossæ

ALCA

interposed in that noble place in the Revelation, which consists of strong and harmonious measures.—*Blackwall, Sacred Classics*, ii. 100.
Leave things so prostitute,
And take the *Alcaick* tune,
Or thine own *Horace*, or *Anacreon's* lyre.
B. Jonson to Himself.

Alcaic. *s.* Greek metre, adopted by the Latins; named after its inventor Alcæus.

He has a copy of *Alcaicks* extant in an Oxford collection on the death of Camden.—*T. Warton, Notes to Milton's Smaller Poems*, p. 429.

Alcaid. *s.* [This, being the first of a list of words which not only begin with the combination *al* followed by the sound of the *c* in *cat*, but of words wherein that combination has arisen out of the Arabic article *al* followed by a noun, serves as a text for some remarks upon the orthography suggested by it. Should the third letter in such words be *c* or *k*? i. e. should words like *al-ali* be spelt with the former of these letters or the latter?

The first rule is one which applies to the word in question, and decides in favour of *c*. *Alcaid* is scarcely an English word; and, even if it be one, is not a word derived directly from the Arabic, but one derived indirectly from it through the Spanish. In short, as far as its immediate derivation goes, it is a Spanish word. As *k* is a letter which is not only strange to the Spanish alphabet, but one which (on the strength of its being treated as foreign to the Latin) is most especially avoided in Spain, the orthography here is clear; and the word stands *Al-c-aid*.

The second rule, which is as decisive as the first, applies to words wherein the fourth letter is one of the slender vowels, *e*, *i*, or *y*; in other words a letter which, if preceded by *c*, would raise a chance of the *c* being sounded as *s*; just as *city* is pronounced *sity*. In this case the decision is in favour of *k*.

For cases, however, where the word is, at one and the same time, *direct* from the Arabic, and has *a*, *o*, or *u* for its fourth letter, there is no decided rule, and, to no great extent, any decided practice. The same author, in some cases, writes *Koran*, in others *Alcoran*.

The nearest approach to a general principle on this point lies in our habit of never using *k* in words of Latin origin. Unless we ignore the etymological principle to an extent which few do, this is a sound rule within its proper limits; i. e. the sphere of the Latin language and the languages derived from it.

To some extent this rule may be plausibly extended to words of Anglo-Saxon origin; inasmuch as, in the classical Anglo-Saxon, *k* was a rare letter. Like the Latins, the Anglo-Saxons eschewed it, and used *c* instead; but only to a certain extent. Before the Norman conquest *k* had become partially naturalized. This arose, partly, out of the influence of the other German alphabets, and, partly, out of the risk run of *c* in certain combinations being sounded as *s*. The A.S. for *king* was *cyning*; German, *könig*; Swedish, *könung*; Danish, *kong*; and in the charters attributed to Edward the Confessor, the use of the latter letter is almost as common as that of *c*. This has been ascribed to Danish influences.

Taking the two principles together, viz. that of the Anglo-Saxons and that of the Latins as exhibited in this disparagement of *k*, the practice in the existing English

ALCH

may be said to be this; viz. never to use *k* where *c* would not run the chance of being sounded as *s*.

So wide has been the extension of this principle that it is applied to words of Greek origin; words wherein the Latin *c* was impossible. More than this; the rule seems to be that whenever *c* is not followed by *a*, *o*, or *u*, it is sounded as *s*. This, at least, is the only principle upon which the fact of *c*, in certain writers, never standing at the end of a word is intelligible; since *c* followed by nothing is treated as *c* followed by *e*, *i*, or *y*; a fact which gives us such words as *kick*, *analytick*, and the like, wherein the function of *k* is to prevent *c* from being final.

I submit that this rule should be interpreted strictly, rather than liberally; and that it requires limitation rather than extension, for it is clear that it only leads to a complicated system of orthographic expedients.

Practically speaking, then, we transliterate the Greek *κ* by *c*; i. e. we treat all words of Greek origin in which it occurs as if they came through the Latin. The effect of this is that *ascetic* and *sceptre* are pronounced *assetic* and *septre*; and that *scepticism* is in a fair way of becoming *septicism*. Again, the Greek *χ* is rendered by *ch*, which is an impossible combination in Greek.

We may now apply these principles to the Arabic. Like the Greek, with its *κ* and *χ* represented by *c* and *ch*, the Arabic has two sounds of *k*, viz. that of *kaf* and that of *khcf*. No one, however, has insisted upon this being the basis of any distinction. Hence, the choice lies between *k* and *c* only. Are all Arabic words to be considered as having reached us through the Latin? If we answer this in the negative, we are as free to use *k* as *c*. Meanwhile, practice is divided. Few, at present, write *alcali*; fewer still *alkohol*; but, on the contrary, *alcohol* and *alkali*.

With this inconsistency before me, I suggest that, if *uniformity* be demanded, the form in *k* should be the standard; and, as uniformity is actually obtained by the alteration of a very few words, I submit that it should be demanded.] Spanish magistrate; governor of a castle, or judge of a city, in Spain.

Shuns the, and, with a grim civility,
Bows, and declines my walks.

Dryden.

Alchémical. *adj.* Relating to alchemy; produced by alchemy.

The rose-noble, then current for six shillings and eight-pence, the alchymists do affirm as an unwritten verity, was made by projection or multiplication alchymical of Raymond Lully, in the tower of London.—*Camden, Remains.*

Alchémically. *adv.* In the manner of an alchemist; by means of alchemy.

Raymond Lully would prove it alchymically.—*Camden, Remains.*

Alchemist. *s.* [see Chemist.] One who pursues or professes alchemy.

To solemnize this day, the glorious sun
Stays in his course, and plays the alchymist,
Turning with splendour of his precious eye,
The meagre cloddy earth to glittering gold.
Shakespeare, King John, iii. 1.

Every alchymist knows, that gold will endure a vehement fire for a long time without any change; and after it has been divided by corrosive liquors into visible parts, yet may presently be precipitated so as to appear in its own form.—*Greus.*

Chemistry undeniably took its rise out of the labours of the alchemists. Some very rational philosophers have maintained, on sound principles, the possibility of a change of properties, when so closely allied as those which distinguish metals. But al-

chemy was essentially mystical.—*Baden Powell, Order of Nature.*

Alchemister. *s.* Same as Alchemist, unless it superadd a notion of disparagement. *Obsolete.*

And when this alchemister saw his time,
'Rise up, Sir Priest,' quoth he, 'and stonde by me.'
Chaucer, Canon Yeoman's Tale.

Alchemistical. *adj.* Acting like an alchemist; practising alchemy.

The alchymistical cabalists, or cabalistical alchymists, have extracted the name, or number, whether you will, out of the word Jehovah, after a strange manner.—*Lightfoot, Miscellanies*, p. 9.

As the first sort of legislators attended to the different kinds of citizens, and combined them into one commonwealth, the others, the metaphysical and alchemistical legislators, have taken the direct contrary course.—*Burke.*

Alchemize. *v. a.* Transmute.

Not that you feared the discolouring cold
Might alchymize their silver into gold.
Lovelace, Lucasta, p. 7.

Alchemy. *s.* [both *alchemy* and *chemistry* are spelt with an *e* rather than *y*; the reason being this. The proper etymological use of *y*, as a vowel, when not at the end of a word, is to represent the Greek *upsilon* in words which have reached us through the medium of the Latin. Practically, this means *all* words containing that sound; just as it did in the case of *æ* and *c*. (See *Æ* and *Alcaid*.) Now the principle herein involved should be limited rather than extended; and as both *chemistry* and *alchemy* are words of doubtful origin, the practice which prefers *e* is adopted. A consistent spelling, however, is impossible. The *al* is Arabic; but, whatever may be the origin of *ch-m*, the *ist* in *chemist* and *alchemist* is Greek. This justifies us in the use of the *ch* = *χ*.]

1. Supposed art of transmuting metals, especially the less into the more noble.

There is nothing more dangerous than this deluding art, which changeth the meaning of words, as *alchemy* doth, or would do, the substance of metals, maketh of anything what it listeth, and bringeth, in the end, all truth to nothing.—*Hooker.*

O, he sits high in all the people's hearts:
And that which would appear offence in us,
His countenance, like richest *alchemy*,
Will change to virtue and to worthiness.

Shakespeare, Julius Caesar, i. 3.
Compar'd to this,

2. Mixed metal, used for spoons and kitchen utensils.

And hear old Chaucer warble through the glades.
Tickell.

b. In apartments.

Of these, eighteen were let into the bedchamber: but they stood at the furthest end of the room. The ladies stood within the alcove.—*Bishop Burnet, History of his own Time*: 1688.

Our English name was perhaps introduced from
Germany, where, as well as Italy, Ray says, the
plant is called *Herba Alexandrina*. Were it not for
this information, we might suspect *Alexanders* to be
a corruption of *olusatrum*.—*Rees, Cyclopædia*.

Alexandrine. *s.* [named from the romance
of *Alexander*, so composed.] Verse of
twelve syllables and six accents.

Our numbers should, for the most part, be lyrical.
For variety, or rather where the majesty of thought
requires it, they may be stretched to the English
heroick of five feet, and to the French *Alexandrine*
of six.—*Dryden*.

A needless *Alexandrine* ends the song,
That, like a wounded snake, drags its slow length
along. *Pope, Essay on Criticism*.

Alexandrine. *adj.* Relating to the verse so
called.

The harmony of his [Boileau's] numbers, as far as
Alexandrine lines will admit.—*J. Warton, Essay*
on the Writings and Genius of Pope, i. 199.

of an antidote.

A prosperous condition hath such a secret poison
in it, as against which no medicine hath been suffi-
ciently *alexipharmacal*.—*Dean Pierce, Sermons*,
29th May, 1661, p. 12.

Alexipharmic. *adj.* Driving away poison;
antidotal; opposing infection.

Some antidotal quality it may have, since not only
the bone in the heart, but the horn of a deer, is
alexipharmic.—*Sir T. Browne, Vulgar Errors*.

Alga. *s.* [Lat.] Sea-weed.

Plural alga.
The ciliated spores of the *alga*; the simplest of
the ciliated animalcules; the most regular of the
compound ciliated organisms, as the *Volvox globator*;
together with the sponges and their allies, may
be instanced as displaying this order of life.—
Herbert Spencer, Principles of Psychology, pt. iii.
ch. vi.

Algates. *adv.* [A.S. *algeates*.] All ways;
on any terms; at any rate. *Obsolete.*

Nor had the boaster ever risen more,
But that Renaldo's horse ev'n then down fell,
And with the fall his leg oppress'd so sore,
That, for a space, there must he *algates* dwell.
Fairfax.

Algebra. *s.* [Arabic.] Science of numbers
in the abstract.

It would surely require no very profound skill in
algebra, to reduce the difference of ninepence in
thirty shillings.—*Swift*.

Collect at ev'ning what the day brought forth,
Compress the weight into its solid worth,
And if it weigh the importance of a fly
The scales are false or *algebra* a lie.
Cowper, Conversation.

Algebraic. *adj.* Relating to algebra.

A fourth of these associated cultivators of science
in the North of England was William Melbourne,
who is stated to have made his way by himself to
certain of the *algebraic* discoveries first published in
Vol. I.

Marriot's work.—*Craik, History of English Literature*, ii. 131.

Algebraical. *adj.* Same as *Algebraic*.

The velocities of evanescent or nascent quantities
are supposed to be expressed, both by finite lines of
a determinate magnitude, and by *algebraical* notes
or signs.—*Bishop Berkeley, Analyst*, § 36.

There is nothing on cubic equations, nor does he
(Recordes) appear to have known anything of the
Italian algebraists. Recordes was one of the few
who had a distinct perception of the difference be-
tween an *algebraical* operation and its numerical
interpretation, to the extent of seeing that the one
is independent of the other.—*Companion to the*
Almanack, 1837.

Algebraist. *s.* One who understands or
practises the science of algebra.

When any dead body is found in England, no
algebraist or uniphoner can use more subtle posi-
tions to find the demonstration or cipher, than
every unconcerned person doth to find the murder-
ers.—*Gravett, Bills of Mortality*.

Confining themselves to the synthetick and ana-
lytick methods of geometers and *algebraists*,
they have too much narrowed the rules of method,
as though every thing were to be treated in mathe-
matical forms.—*Wallis, Logick*.

Alias. *adv.* [Lat.] Otherwise; under an-
other name.

What nation formerly knew not the acts of Eng-
lishmen better than themselves? otherwise Polydore
Virgil had not undertook, to our shame and pre-
judice, the English chronology; nor Verstegan, *alias*
Lowly, the confidence to render well-nigh all the
considerable gentry of this land, from the etymo-
logy of their names, Teutonicks.—*Sir T. Herbert*,
Travels, p. 396.

Alias. *s.*

1. False name.

An author who was determined to print, and could
not obtain a license, must employ the services of
needy and desperate outcasts, who, hunted by the
peace officers, and forced to assume every week new
aliases and new disguises, hid their paper and their
types in those dens of vice which are the pest and
the shame of great capitals.—*Macaulay, History of*
England, ch. xxi.

time.

If the sheriff cannot find the defendant upon the
first writ of *capias*, there issues out an *alias* writ.—

Alibi. *adv.* [Lat.] In Law. Elsewhere.

endeavoured to prove himself *alibi*, so that the trial
turned upon this single question, whether the said
Timothy, Trim, and Jack were the same person.—

Alibi. *s.* In Law. Plea consisting of the
statement that the person charged was *alibi*.

So, on a charge of highway robbery, the prose-
cutor was allowed to rebut an *alibi*, by proving that
shortly before the attack was made upon him, and
near the same spot, the prisoner had robbed another
person.—*J. P. Taylor, Treatise on the Law of Evi-*
dence, vol. i. pt. ii. ch. ii. § 314.

For some of the prisoners an *alibi* was set up.—
Macaulay, History of England, ch. xx.

Inglorious shelter in an *alien* land. *A. Philips*.

Bitter-spirited malcontents muttered that, since
there was no honourable service which could not
be as well performed by the natives of the realm as
by *alien* mercenaries, it might be suspected that the
king wanted his *alien* mercenaries for some service
not honourable.—*Macaulay, History of England*,
ch. v.

2. Estranged; adverse: (with *from*).

To declare my mind to the disciples of the fire, by
a similitude not *alien* from their profession.—*Boyle*.

ness, and a prey to the great destroyer.—*Rogers*,
Sermons.

They encouraged persons and principles, *alien*
from our religion and government, in order to
strengthen their faction.—*Swift, Miscellanies*.

but enemies, so as it was no capital offence to kill
them.—*Sir John Davies, On Ireland*.

But the situation of James was widely different
from that of Elizabeth. Far inferior to her in abili-
ties and in popularity, regarded by the English as an
alien, and excluded from the throne by the testa-
ment of Henry the Eighth, the King of Scots was
yet the undoubted heir of William the Conqueror and
of Egbert.—*Macaulay, History of England*, ch. i.

With to.

prince was totally *aliened* from all thoughts of, or
inclination to, the marriage.—*Lord Clarendon*.

Alienability. *s.* Capability of being alienated
or transferred.

Whoever seriously considers the excellent argu-
ment of Lord Somers in the *backer's* case, will see he
bottoms himself upon the very same maxim which
I do; and one of his principal grounds of doctrine
for the *alienability* of the domain in England con-
trary to the maxim of the law in France, lays in
the constitutional policy of furnishing a permanent
reward to public service; of making that reward
the origin of families; and the foundation of wealth
as well as of honours.—*Burke*, ii. 236. (Ord MS.)

Alienable. *adj.* Capable of being alienated.

Land is *alienable*, and treasure is transitory, and
both must pass from him by his own voluntary act,
or by the violence of others, or at least by fate.—

Alienate. *v. a.*

1. Transfer the property of anything to an-
other.

While, on the one hand, the clergy extorted from
the dying prince or noble some important grant,

scruple at no means of resuming his *alienated* rights
or property.—*Milman, History of Latin Chris-*
tianity, b. vii. ch. i.

2. Withdraw the heart or affections.

The manner of men's writing must not *alienate*

opinions.—*Hooker*.

Of *alienated* Judah. *Milton, Paradise Lost*, i. 456.

Anything that is apt to disturb the world, and to
alienate the affections of men from one another,
such as cross and distasteful humours, is either
expressly, or by clear consequence and deduction,
forbidden in the New Testament.—*A. Archbishop Till-*
otson.

Castilian, whom she was taught to look upon as a formal old fellow.—*Addison*.

Great changes and *aliénations* of property have created new and great dependencies.—*Swift, On Athens and Rome*.

According to the strict law, the clergy could receive everything, *alienate* nothing. But the frequent and bitter complaints of the violent usurpation, or the fraudulent *aliénation* by the clergy themselves, of what had been church property, show that neither party respected this sanctity when it was the interest of both to violate it.—*Milman, History of Latin Christianity*, b. vii. ch. l.

2. State of being alienated: (as, the estate was wasted during its *aliénation*).

That darkness which our sin causeth, in the *aliénation* and absence of the light of God's countenance, is, without his great mercy, the beginning of an utter exclusion from the beatific face of God.—*Bishop Hall, Remains*, p. 42.

Some of the popish bishops were no less *aliénators* of their episcopal endowments, than many other bishops of the protestant church proved afterwards, in the reigns of Edward the Sixth and Elizabeth.—*T. Warton, Life of Sir T. Pope*, p. 40.

Aliéno. *v. a.* Same as *Aliénate*. *Rare*.

The words in my book which he [Mr. Boyle] excepts against are commentaries, repudiate, conceal, *aliéno*, vernacular, timid, negro, putid, and 'idiom': every one of which were in print before I used them, and most of them before I was born. Why may we not say 'negro' from *negocium*, as well as 'commerce' from *commercium*, and 'palace' from *palatium*? Has not the French nation been beforehand with us in espousing it? and have not we 'negotiate,' and 'negotiation,' words which grew upon the same root, in the commonest use?—*Bentley, Preface to the Dissertation upon Phalaris*: quoted by Dean Trench in *Deficiencies of our English Dictionaries*.

Aliénism. *s.* Condition of an alien.

Precedents were not wanting for them (general warrants) even of a very late date, but they were generally justified on some plea of war or *aliénism*, that seemed to take the cases out of the pale of common law right and ordinary proceeding.—*Raikes, On the English Constitution*, ii. 376.

Alife. *adv.* [two words rather than a compound.] Vulgarism for 'on (my) life.'

Alife-minded. *adj.* [two words rather than a compound.] Having like minds.

Aliment. *s.* [Lat. *alimentum*, from *alo* = nourish.] That which nourishes; food.

New parts are added to our substance; and as we die, we are born daily; nor can we give an account how the *aliment* is prepared for nutrition, or by what mechanism it is distributed.—*Glanville, Scopsis Scientifica*.

All bodies which, by the animal faculties, can be changed into the fluids and solids of our bodies, are called *aliments*. In the largest sense, by *aliment*, I understand every thing which a human creature takes in common diet; as, meat, drink; and seasoning, as, salt, spice, vinegar.—*Arbutnot, On the Nature and Choice of Aliments*.

Alimental. *adj.* Having the quality of aliment; nourishing; feeding.

The sun, that light imparts to all, receives From all his *alimental* recompense, In humid exhalations.

Alinéation. *s.* [Lat. *alineatio*, -onis.] In Astronomy. Determination of the position of distant points by a line drawn through an intermediate one.

In order to determine this fundamental question, Hipparchus undertook to construct a Map of the heavens; for, though the result of his survey was expressed in words, we may give this name to his Catalogue of the positions of the most conspicuous of the stars. The positions are described by means of *alinations*; that is, three or more such stars are selected as can be touched by an apparent straight line drawn in the heavens.—*Whevell, History of the Inductive Sciences*, b. i. ch. iv. § 1.

A method of determining the positions of the stars, susceptible of a little more exactness than the former, is the use of *alinations*, already noticed in speaking of Hipparchus' catalogue. Thus a straight line passing through two stars of the Great Bear passes also through the pole-star; this is, indeed, even now, a method usually employed to enable us readily to fix on the pole star; and the two stars *a* and *β* of Ursa major are hence often called 'the pointers'.—*Ibid.* b. iii. ch. iii. § 3.

Aliquot. *adj.* [Lat. *aliquot*.] In Arithmetic. Parts of any number or quantity, which will exactly measure it without any remainder, are said to be *aliquot*: as 3 is an aliquot part of 12, because, being taken four times, it will just measure it.

man alive, could not look upon the destruction of
monarchy with any pleasure.—*Lord Clarendon*.

Alkahest. s. [Arabic.] Universal solvent
of the alchemists.

The properties of the *alkahest*, according to Van
Helmont, are the following: It is a fluid of perfect
simplicity and purity, is never found native, but
always prepared by art; is capable of dissolving all
substances into a liquor which rises wholly in dis-
tillation, leaving no lees behind; at the same time
that the *alkahest* itself spontaneously separates from
the body on which it has produced such a remark-
able change. . . . We now hear no more of the *alka-
hest* than of the elixir of metals, and the universal
medicine.—*Rees, Cyclopaedia*.

Alkaléscent. adj. With a tendency to the
properties of an alkali.

All animal diet is *alkaléscent* or anti-acid.—*Ar-
buthnot, On the Nature and Choice of Aliments*.

count of the effects produced by the respiration of
nitrous oxide (the laughing gas) in 1800, in 1807
extracted metallic bases from the fixed *alkalis*, in
1808 demonstrated the similar decomposability of
the metallic earths, in 1811 detected the true nature
of chlorine (oxymuriatic acid), and in 1815 invented
his safety-lamp. In 1804 Leslie published his Experi-
mental Enquiry into the Nature and Properties of
Heat. In 1808 the atomic theory was announced by
Dalton; and in 1814 its development and illustration
were completed by Wollaston, to whom both chemi-
cal science and optics are also indebted for various
other valuable services.—*Cruik, History of English
Literature*, ii. 519.

Alkaline. adj. With the qualities of alkali.

ing very long, by diluting the fluids, and conse-
quently keeping them from an *alkaline* state.
People have lived twenty-four days upon nothing
but water.—*Arbuthnot, On the Nature and Choice of
Aliments*.

For example, let the antecedent A be the contact
of an *alkaline* substance and an oil. This combi-
nation being tried under several varieties of circum-
stances, resembling each other in nothing else, the
results agree in the production of a greasy and de-
tersive or saponaceous substance; it is therefore con-
cluded that the combination of an oil and an alkali
causes the production of a soap.—*Mill, System of
Logic*, ch. viii.

Alkalious. adj. Abounding in alkali; al-
kaline. *Obsolete*.

Each of them may partake of an acid and *alka-
lious* nature.—*Dr. Keimair, Essay on the Nerves*,
p. 134: 1739.

Alkalizate. v. a. Reduce to the condition
of an alkali. *Rare*.

body, given often, and in small doses, is a safe general
deobstruent.—*Cheyne, Philosophical Discourses*, 3.
(Ord MS.)

alkali; impregnated with alkali. *Rare*.

that which it discovers, being dissolved in hot water,
is different being of kin to that of other *alkalizate*
salts.—*Boyle*.

The colour of violets in their syrup, by acid liquors,
turns red, and, by urinous and *alkalizate*, turns
green.—*Sir I. Newton*.

hogany and rosewood colour.—*P. L. Simmonds, Com-
mercial Products of the Vegetable Kingdom*.

stain.—*Sir T. Browne, Vulgar Errors*

Alkermes. s. [see Kermes.] Confection,
in which kermes was an ingredient.

Christophorus Ayerius prefers bezoar stone, and
the confection of *alkermes*, before other cordials;
and amber in some cases: *Alkermes* comforts the
inner parts, and bezoar stone hath an especial virtue
against all melancholy affections.—*Burton, Anatomy
of Melancholy*, p. 397.

Alkohol. s. [Arabic, *al* = the, *kohl* = impal-

ALL

pable powder; hence anything brought to
extreme tenuity.] Pure spirit.

If the same salt shall be reduced into *alcohol*, as
the chymists speak, or an impalpable powder, the
particles and intercepted spaces will be extremely
lessened.—*Boyle*.

Where with her best nurse, Contemplation,
She plumes her feathers, and lets grow her wings,
That in the various bustles of resort
Were *all-to* ruffled, and sometimes impair'd.

Milton, Comus, 380.

All-triumphing. part. pref. [such, at least, is the accent in the quotation from Ben Jonson. It would now (if used) be sounded *all-triumphing*.] Everywhere triumphant. As you were ignorant of what were done By Cupid's hand, your *all-triumphing* son.

Irenæus was bishop of Vienne in Gaul; and so
completely is Christianity now one world, that a
bishop of Gaul *allays* a feud in which the bishop of
Rome is in alliance with the bishops of Syria and of
the remoter East, against those of Asia Minor.—
Milman, History of Latin Christianity, b. i. ch. ii.
[Two distinct words are confounded in the modern
allay, the first of which should be properly written
with a single l, from A.S. *alecgan*, to lay down, to
put down, suppress, tranquillise. The other form,
confounded with *allegre* from *alecgan*, is the old
allegre, from Fr. *allegre*, Ital. *alleggiare*, Lat. *al-
leviare*, to lighten, mitigate, tranquillise, thus coming
round so exactly to the sense of *allegre* from *alecgan*,
that it is impossible sometimes to say to which of
the two origins the word should be referred.—*Wedg-
wood, Dictionary of English Etymology*.]

Allay. s. [The equivocal character of this
word is indicated by the preceding extract. Refer-
ences to *Allegre* and *Alloy* will put
it in a still stronger light. Three similar
combinations in the way of sound coincide,
to a certain extent, in sense: (1) *alecgan* =
lay down; (2) *alleviare* = lighten; (3) *ad
legem* = according to law. Each of these
may come to mean *abatement*. When this
is the case, it is by no means easy to say how
the signification originated. The notion
may have come from the calm that suc-
ceeds a storm at sea; or it may have come
from the lightening of a burden; or it may
have come from the regulation or tempering

of a mixture. Of the following extracts, the first seems to give a derivative of *alleviare*, the others one of *ad legem*.]

1. That which lightens.

Friendship is the *alloy* of our sorrow, the care of our passions, the discharge of our oppression, the sanctuary to our calamities, the counsellor of our doubts, the charity of our minds, the emission of our thoughts, the exercise and improvement of what we meditate.—*Jeremy Taylor*. (Ord MS.)

For fools are stubborn in their way,
As coins are harden'd by th' alloy. *Butler, Hudibras*.

Sir Diaphanous is a recusant
In sack: He only takes it in French wine,
With an alloy of water. *B. Jonson, Magnetick Lady*, iii. 1.

Allayer. s. Person or thing which has the power to alloy.

Phlegm and pure blood are reputed *allayers* of acrimony; and Avicen countermands letting blood in choleric bodies; because he esteems the blood a *frænum bilis*, or a bridle of gall, obtunding its acrimony and fierceness.—*Harvey*.

Allaying. part. adj. Tempering, diluting.

When flowing cups run swiftly round
With no *allaying* Thames,
Our careless heads with roses bound,
Our hearts with loyal flames. *Lovelace*.

Allayment. s. That which has the power to alloy or abate the force of another.

Alléctive. s. Allurement. *Rare*.

What better *alléctive* could Lucifer devise to allure and bring men pleasantly into damnable servitude, than to purpose to them in form of a play [dice-playing] his principal treasury, wherein the more part of sin is contained, and all goodness and virtue confounded.—*Sir Thomas Elyot, The Governour*, fol. 79, b.

Many strong *alléctives* to evil in the lower carnal part of the man, as well as invitations and obligations to good in the upper and spiritual.—*Hammond, Sermons*.

That new course of life . . . had nothing to recommend it to his taste but its unpleasantness, the best *alléctive* unto him.—*Bishop Fell, Life of Hammond*, § 3.

I omitted no means to be inform'd of my errors;
and I expect not to be excused in any negligence on account of youth, want of leisure, or any other idle *allegations*.—*Pope*.

Such allusions ought to impose on no one without a careful comparison of facts; and most assuredly that comparison will not bear out the *allegation* of increased corruption and degeneracy between the age of Miltiades and the end of the Peloponnesian war.—*Grote, History of Greece*, pt. ii. ch. lxvii.

Allége. v. a. [Lat. *allego*.] Affirm; declare; maintain; plead as an excuse, or produce as an argument.

Now this *alleged* simultaneity in our consciousness of subject and object, on which Sir William Hamilton relies for his proof of realism, will not only be disputed by many as not being uniformly confirmed by their experience, but there would be no sufficient warrant for his conclusions, did experience invariably endorse his premiss.—*A Datum wanted*, pt. i. ch. i. § 3.

[To *allege*.—Lat. *legare*, to intrust or assign unto; *allegare*, to depute or commission one, to send a message, to solicit by message, 'Petit a me Rabonius, et amicos allegat.' Rabonius asks of me, and sends friends (to support his petition). Hence it came to signify to adduce reasons or witnesses in

support of an argument. Here [in a passage from Chaucer, and another from Piers Plowman] we find *allege* from Lat. *allegare* spelt and pronounced in the same manner as *allege* (the modern *alloy*) from A.S. *alegan*, and there is so little difference in meaning between laying down and bringing forward reasons, that the Latin and Saxon derivations were sometimes confounded.—*Wedgwood, Dictionary of English Etymology*.]

Allegeable. adj. Capable of being alleged.

Upon this interpretation all may be solved, that is *allegeable* against it.—*Sir T. Browne, Vulgar Errours*.

Is there so much as the least shadow of excuse *allegeable* for parents not bringing their children to the bishop to be confirmed by him.—*South, Sermons*, v. 37.

As spelt in the text it is the only word in the English language in which *j* (as in Germany and elsewhere) is sounded as *y*.] Word of spiritual exultation used in hymns. thing, with some concessions or cautions
regarding something else.

If we consider the different occasions of ancient
and modern medals, we shall find they both agree
in recording the great actions and successes in war,
allowing still for the different ways of making it,
and the circumstances that attended it.—*Addison.*

[Two words seem here confounded; 1. from Lat. *lau-
dare*, to praise, and 2. from *locare*, to place, to let;
especially *laus* as applied to the approbation
given by a feudal lord to the alienation of a fee
depending upon him, and to the fine he received
for the permission to alienate. From signifying
consent to a grant, the word came to be applied to
the grant itself. Again, as the senses of Lat.
laudare and *allocare* coalesced in Fr. *allower* and
Eng. *allow*, the confusion seems to have been carried
back in the contemporary Latin, where *allocare* is
used in the sense of appraise or admit: 'essonium
allocabile,' an admissible excuse.—*Wedgwood, Dic-
tionary of English Etymology.*]

Allowable. adj.

1. Capable of being allowed or admitted.

It is not *allowable*, what is observable in many

C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. v.
 In the different countries for which we have returns, we find year by year the same proportion of persons putting an end to their own existence; so that, after making allowance for the impossibility of collecting complete evidence, we are able to predict, within a very small limit of error, the number of voluntary deaths for each ensuing period; supposing, of course, that the social circumstances do not undergo any marked change.—*Buckle, History of Civilization in England*, vol. i. ch. i.

 The applauses which were justly due to his conduct at Walcourt could not altogether drown the voices of those who muttered that, wherever a broad piece was to be saved or got, this hero was a mere Euclio, a mere Harpagon; that, though he drew a large allowance under pretence of keeping a public table, he never asked an officer to dinner; that his muster rolls were fraudulently made up; that he pocketed pay in the names of men who had long been dead, of men who had been killed in his own sight four years before at Sedgemoor; that there were twenty such names in one troop; that there were thirty-six in another.—*Macaulay, History of England*, ch. xiv.

(Ord MS.)
Allure. v. a. [see *Lure*.] Entice.

 Where the expression in one place is plain, and the sense affixed to it agreeable to the proper force of the words, and no negative objection requires us to depart from it; and the expression, in the other, is figurative or allusive, and the doctrine, deduced from it, liable to great objections; it is reasonable, in this latter place, to restrain the extent of the figure and allusion to a consistency with the former.
Rogers, Sermons.
 The subjects falling within the scope of the Pro- fessorship of Ancient and Modern History are so various and so vast, that an attempt of mine to treat them or any large portion of them compre- hensively, in such a course of lectures as the same body of students could possibly attend, would only develop itself in the production of mere skeleton outlines, of disjointed and unequal fragments, or, at best, of an unsatisfactory series of hasty and allusive sketches.—*Sir E. Creasy, Introductory Lecture on the Study of History*.
Allusively. adv. In an allusive manner; by implication; by insinuation.
 The Jewish nation, that rejected and crucified him, within the compass of one generation, were, according to his prediction, destroyed by the Ro- mans, and preyed upon by those eagles (*Matt.* xxiv. 28) by which, allusively, are noted the Roman ar- mies, whose ensign was the eagle.—*Hammond*.

Alluvial. adj. Of the nature of alluvium.
 These recent formations present themselves in a still more striking form in the north of the island, the greater portion of which may be regarded as the conjoint production of the coral polypi, and the currents, which, for the greater portion of the year, set impetuously towards the south. Coming laden with alluvial matter collected along the coast of Coromandel, and meeting with obstacles south of Point Calimere, they have deposited their burthens on the coral reefs round Point Pedro; and these gradually raised above the sea level, and covered deeply by sand drifts, have formed the peninsula of Jaffna and the plains that trend westward till they unite with the narrow causeway of Adam's Bridge.—*Sir J. E. Tennent, Ceylon*, pt. i. ch. i.

 The civil law gives the owner of land a right to that increase which arises from alluvion, which is defined an insensible increment, brought by the water.—*Cowell*.
 Languages are like laws or coins, which commonly receive some change at every shift of princes: or as slow rivers, by insensible alluvions, take in and let out the waters that feed them, yet are they said to have the same beds.—*Howell, Letters*, iv. 19.
Alluvium. s. [Lat.] Deposit of matter brought from a higher to a lower level, by water: (a geological, rather than a legal, term; for the difference between which and Diluvium and Drift see those words).

Almacantar. *s.* [*Arabic.*] In *Astronomy*. Circle drawn parallel to the horizon: (generally used in the plural, and meaning a series of parallel circles drawn through the several degrees of the meridian).

Before quitting the subject, we may observe that *Astronomy* brought back from her sojourn among the Arabs a few terms which may still be perceived in her phraseology. Such are the zenith, and the opposite imaginary point the nadir—the circles of the sphere termed *almacantars* and azimuth circles. The alid of an instrument is its index, which possesses an angular motion. Some of the stars still retain their Arabic names: Aldebaran, Regel, Fomenhaut. Many others were known by such appellations a little while ago. Perhaps the word *almacantar* is the most familiar vestige of the Arabic period of astronomy.—*Whewell, History of the Inductive Sciences*, b. iii. ch. iv. § 230.

Almagest. *s.* [*Arabic and Gr.*] Title of a work of Ptolemy.

I speak of Ptolemy, whose work, the 'Mathematical Construction' (of the heavens), contains a complete exposition of the state of astronomy in his time,—the reigns of Adrian and Antonine. The book is familiarly known to us by a term which contains the record of our having received our first knowledge of it from the Arabic writers. The 'Megiste Syntaxis,' or great construction, gave rise among them to the title *Al Magiste*, or *Almagest*, by which the work is commonly described.—*Whewell, History of the Inductive Sciences*, b. iii. ch. iv. § 6.

Almanack. *s.* [*? Arabic.*] Calendar; book in which the revolution of the seasons, with the return of feasts and fasts, &c., is noted for the year.

It will be said, this is an *almanack* for the old year; all hath been well; Spain hath not assailed this kingdom.—*Bacon.*

This astrologer made his *almanack* give a tolerable account of the weather, by a direct inversion of the common prognosticators.—*Dr. H. More, Government of the Tongue.*

And the place (Birmingham) whence, two generations later, the magnificent editions of Baskerville went forth to astonish all the librarians of Europe, did not contain a single regular shop where a Bible or an *almanack* could be bought.—*Macaulay, History of England*, ch. iii.

In this catalogue of books which are no books—biblia a-biblia—I reckon court calendars, directories, pocket books, draught boards bound and lettered on the back, scientific treatises, *almanacks*, statutes at large: the works of Hume, Gibbon, Robertson, Beattie, Soame Jenyns, and, generally, all those volumes which 'no gentleman's library should be without': the histories of Flavius Josephus (that learned Jew), and Paley's Moral Philosophy.—*Lamb, Last Days of Elia, Detached Thoughts on Books and Reading.*

[The etymology of this word has been differently given. Some have derived it from the Arabic particle *al*, and *manack* to count; others from *al* and *manax*, the course of the months. Golius is of another opinion: he says that, throughout the East, it is the custom for subjects, at the beginning of the year, to make presents to their princes; and, among the rest, the astronomers presented him with the ephemerides for the ensuing year, whence these ephemerides were called *almanka*: viz. handsets or new-year's gifts. Others, again, as Verstegan, write the word *almonat*, making it of German origin. Our ancestors, the author observes, were in the practice of carving the course of the moon for the year upon a square piece of wood which they called *almonaght*, signifying, in Old English or Saxon, *all-moon-need*. Whether any one of these may be considered as a direct derivation of the word *almanac*, it is very difficult to decide: with respect to the notion of Golius, we have had an opportunity of consulting Meerza Jaafar, a gentleman belonging

ALMO

to the court of the Prince of Persia, and a native of that country, of great intelligence and veracity; he assures us that, though the custom be as Golius describes, neither the Persians nor the Arabians have any such word as *almanka*.—*Encyclopædia Metropolitana*.]

Almandine. *s.* [see last extract.] Red transparent variety of the garnet.

Almandine may be distinguished from Corundum or Spinel by its duller colour.—*Bristow, Glossary of Mineralogy.*

They would pelt me with starry spangles and shells,
Laughing and clapping their hands between,
All night, merrily, merrily:

But I would throw to them back in mine
Turkis and agate and *almondine*.

Tennyson, The Merman.

The borrow'd glories, that, by gift of heaven,
By law of nature and of nations, 'long
To him and to his heirs. *Shakespeare, Henry V.* ii. 4.

Almighty. *s.* Omnipotent: (usually applied to the Deity).

By the Almighty, who shall bless thee.—*Genesis*, xlix. 25.

So spake the Almighty, and to what he spake
His Word, the Filial Godhead, gave effect.

Milton, Paradise Lost, vii. 174.

Almond. *s.* [*Lat. amygdalum.*]

The bishops entreated Becket either to withdraw or to change the offensive word. At first he declared that if an angel from heaven should counsel such weakness, he would hold him accursed. At length, however, he yielded, as Herbert de Bosham asserts, out of love for the king, by another account at the persuasion of the Pope's *almoner*, said to have been bribed by English gold. He went to Oxford and

Alóne. *adj.* [The exact details of the form of this word are obscure; and they belong to minute philology, rather than to lexicography. The *al-*, in the first instance, looks like *all*. In *lone*, however, we have it without the *a*: a syllable which, viewed merely with respect to its form, may represent the initial of *all*, the French *a*, or Anglo-Saxon *on*.

The second element, however, is *one*; the construction of which is peculiar. Just as the construction of *self* is sometimes that of a substantive preceded by a possessive pronoun (like *myself* = *mea*, or *mei*, *individualitas*), and sometimes that of an adjective (as in *himself* = *eum individuum*); so is *one*, though generally more of an adjective than a substantive, not unfrequently treated as a substantive; as may be seen in the following examples supplied by Dr. Guest (*Transactions of the Philological Society*, no. 22):

'In this world's wote I no knight,
Who durst his one with hym fight.'

Ypomedon, 1690.
'bali ha hire ane were
Ayein so kere keisere and al his kineriche.'

Betwixt ourselves let us decide it then.

Alone on the wide wild sea;
And never a saint took pity on
My soul in agony. *Coleridge, Ancient Mariner*.

2. Not to be matched; without an equal.

All I can, is nothing
To her, whose worth makes other worthies nothing:
She is *alone*.

Shakespeare, Two Gentlemen of Verona, ii. 4.

Not *alónely* the Germans, but also the Italians
themselves, that counte, as the Greeks did full arrogantly, all other nations to be barbarous and unlettered.—*Leland, New Year's Gift*, E. 3.

night or two before, that I might sleep on it.—*Return from Parnassus*.

Who is this 'long of?—*Stubbes, Anatomy of Abuses*, ii.

[We must distinguish *alóng*, through the length of, from *alóng*, in the sense of causation, when some consequence is said to be *alóng of* or *alóng* of a certain agent or efficient principle. In the former sense *long* is originally an adjective agreeing with the object now governed by the preposition *alóng*. In the latter it is the O.S. and A.S. *gelang*, owing to, in consequence of; from *gelingen*, to happen, to succeed. . . . His son on whom *bat gelang* were; they inquired *alóng* of whom that was, whose fault it was from whom it happened that it was.—*Wedgwood, Dictionary of English Etymology*.]

He is aloof from grace, as the way; so from glory, as the end; here is indeed a great gulfe, and unmeasurable, betwixt the sinner and heaven.—*Bishop Hall, Remains, p. 86.*

Pennant, in noticing the second British species of shad taken out of the Thames and Severn, which is without teeth, or the row of lateral spots, called it an *allis*, a name preferable to *alosa*. The old name for the shads was *Lachia*, and hence are derived *Hallachia*, *Alachia*, *Alosa*, *alose*, *allis* or *allice*. *Ausonius*, who wrote A.D. 380, in his poem on the Moselle, calls the fish *alausea*; and we follow M. Valenciennes in using this name as more euphonious than *alosa*. I venture to propose the names *twiste-shad* and *allice-shad* for our two species, the better in future to distinguish them; thus combining the generic name shad with a trivial name by which these two fishes have been hitherto, to some extent at least, locally known.—*Farrall, British Fishes.*

Alto-relievo. s. [Ital. = high relief.] Sculp- ture on a flat surface, in which the figures are very prominent without being wholly detached, and are raised at least one half.

It is a back in alto-relievo that bears all the ridic-
ule; though one would think a prominent belly a
more reasonable object of it: since the last is gen-
erally the effect of intemperance, and of a man's own
creation.—*Hay, Essay on Deformity.*

Aludel. s. [?] See extract. Obsolete.

Aludel, in Chemistry, an earthen pot, or cucur-
bite, formerly used for containing substances for
distillations. It was open at both ends, that a series
might be readily joined together.—*Encyclopædia
Metropolitana.*

Alum. s. [Lat. alumen.] Sulphate of alumina and potassa.

Although the term *alum* (*alumen* of the Romans,
αλμυρα of the Greeks) occurs in the writings of
Herodotus [sic], Hippocrates, Pliny, Dioscorides,
and other ancient writers, yet it is not satisfactorily
proved that our *alum* was the substance referred to.
On the contrary, the learned Beckmann has asserted
that the *alum* of the Greeks and Romans was sul-
phate of iron, and that the invention of our *alum*
was certainly later than the twelfth century. But
Geber, who is supposed to have lived in the eighth
century, was acquainted with *alum*, and describes
the method of burning it; and it is not, I think,
improbable that even Pliny was acquainted with it,
though he did not distinguish it from sulphate of
iron.—*Pereira, Elements of Materia Medica.*

Alum-stone. s. Stone or calx used in sur- gery: (perhaps alum calcined, which then becomes corrosive).

She gargled with oxyerate, and was in few days
cured, by touching it with the vitriol and alum-
stones.—*Wiseman, Surgery.*

Alumina. s. Oxide of Aluminium.

That *alumina* is an oxidized body was proved by
Davy. The propriety of this inference has been

demonstrated by Wöhler, who has procured alumi-
nium in a pure state.—*Turner, Chemistry.*

Aluminous. adj. Relating to alum or con- sisting of alum.

Nor do we reasonably conclude, because, by a cold
and aluminous moisture, it is able a while to resist
the fire, that from a peculiarity of nature it sub-
sisteth and liveth in it.—*Sir T. Browne.*

Aluminium. s. See Alumina.

Aluminium, aluminum, or aluminium, is the metallic
base of the earth alumina.—*Pereira, Elements of
Materia Medica.*

Alumish. adj. Having the nature of alum. Rare.

Upon discoursing concerning Irish slate, Sir Wil-
liam Petty remarked that there were two sorts in
Ireland: the one more strong or slaty, found at
Slane in the county of Meath; the other an earth or
bole, being blacker and less slaty than the former,
tasting something *alumish*, and being found near
some places which afford alum.—*History of the
Royal Society, iv. 196.*

Alveary. s. [Lat. *alvearium* = beehive.] Book serving as a repertorium or thesau- rus. Obsolete.

Within a yeare or two, they had gathered together
a great volume, which (for the apt similitude be-
tweene the good scholars and diligent bees in gather-
ing their wax and home into their hive) I called
them their *alvearie*: both for a memoriall by whom
it was made, and also by this name to encourage
other to the like diligence, for that they should not
see their worthe praise for the same unworthilie
drowned in oblivion.—*Barret, To the Reader.*

Alway, or Always. adv. [A.S. *eal* = all, *wag* = way.]

1. Perpetually; throughout all time: (op- posed to *sometime*, or to *never*).

That, which sometime is expedient, doth not
always so continue.—*Hooker.*

Man never is, but *always* to be blest. *Pope.*
I loath it; I would not live *always*: let me alone;
for my days are vanity.—*Job, vii. 16.*

2. Constantly; without variation: (opposed to *sometimes*, or to *now and then*).

He is *always* great, when some great occasion is
presented to him.—*Dryden.*

Leave us not, we beseech thee, destitute of thy
manifold gifts, nor yet of grace to use them *always*
to thy honour and glory.—*Collect for St. Barnabas
Day.*

Am. copula of present time, in the first per- son singular.

[The principle upon which we separate
neuter from active verbs, when, as far as
the mere sound is concerned, the words
are the same, if consistently acted on,
leads us to separate *am* as the simple copula
from *am* the verb. *Am* the verb will be
found under the next head.

The second point which requires notice
is the meaning of the word *copula*, and the
reason why it is used here as the name
of a part of speech. Whatever *am* in the
ordinary sense of the word may be, it is not
a verb. The essence of a verb lies in the
fact of its being able to form the predicate
of a proposition. It does something more.
It forms the copula as well; inasmuch as,
since a proposition falls into three parts,
the subject, the predicate, and the copula,
the verb delivers the predicate and the
copula together. If it give the predicate
only it is a participle; as, *I am speaking*.
If it give both it is a verb; as, *I speak*.
Every verb then contains two elements,
the copula and the predicative; the latter
being, when we consider it as a part of
speech, participial. It is clear that *am*, in
such an expression as the one just given,
is neither verb nor participle. All that can
be said of it is that it forms an element in
the notion conveyed by the word. This is
the reason for avoiding the ordinary name,
verb substantive; for so the word *am* (to
which we may add *be* and *was*) is gene-
rally named. It is as little a verb as a
substantive, and as little a substantive as a
verb. It is a part of speech *per se*.

What it does is this: it shows that the

subject and predicate stand in a relation
to one another. When it stands alone, it
shows that they agree. When it is fol-
lowed by *not*, it shows that they differ, i.e.
that the attribute conveyed or suggested
by the predicate is not common to it and
the subject. It is a sign of equality or
non-equality rather than aught else; and
in this abstract form it should be con-
sidered.

There are several facts supplied by Com-
parative Philology which lead us to believe
that it was not used affirmatively until after
a negation had been current. In more than
one language it is wholly absent, so that
fire hot = fire is hot. In such cases *fire
not hot* preceded *fire is hot*.

The pure and simple copula enters into
the expression of agreement or disagree-
ment between the subject and predicate,
and nothing more. It takes no cognizance
of the manner in which they disagree or
agree. In most languages, however, it
conveys the superadded notion of Time as
well. For this reason *am* is called the
copula of present time; *was* being that of
past; and *be* that of indefinite time.

Such are the reasons for the innovation
upon the ordinary phraseology conveyed in
the words *copula of present time*.

The analysis of the word in respect to its
form is another matter. In respect to its
form, *am* is a copula and something more.
It is a copula and a subject; and, so far
as it is this, it may be called a verb sub-
stantive; but this is not the sense in which
the term has been used.

The final *-m* is no part of the original
word; but, on the contrary, it is the sign of
the first person singular: in other words,
it is the *m* in the Latin word *su-m*, and the
Greek word *ει-μι*. This means that it is
the English equivalent to what the Greek
grammarians call the verbs in *-μι*. The
fragmentary nature of this form is mea-
sured by the fact that, even in the Latin
no words retain it but *sum* and *inquam*.
In the Lithuanic and Slavonic it is nearly
as fragmentary, the forms being fuller; as,
dūmi = ειμι = do = I give. In Old High-
German the first person present of the
verb meaning *stand* is *sto-m*; so that it is
in the O.H.G. division that the form under
notice is just a little less fragmentary than
elsewhere.

In the languages derived from Latin the *m*
is either changed into *n* as in the Italian
so-no = *am*, or wholly lost, as in the French
suis or the Spanish *soy*. In the Scandi-
navian languages, also, the *m* is lost.

In A.S. the form was *eom*, the *e* being
sounded as *y*:

'I am a man
More sinned against than sinning.'
Shakespeare, King Lear, iii. 2.

Art.—This is the copula in the second
person: the *-t* being (like the *-m* in *am*) no
part of the original word but a personal
sign. Its origin, however, is obscure; in-
asmuch as the ordinary ending in the
singular number was *-st*, as in *call-est*,
and in the older stages of the language,
-s, as *sok-est*, seek-est in Mæso-Gothic,
and in Old Saxon. *Art*, then, was proba-
bly in its origin plural. The only
other second persons singular which end
in *-t* are *wilt* and *shalt*; of which it is
only the first that is truly in the present
tense; *shall* being, originally, a perfect.
See *Shall*.

With *t* taken away as the personal ending, on the one side, and *m*, on the other, the parts that stand over for comparison are *a*, (from *a-m*) and *ar* (from *ar-t*); a fact which leads us to ask whether the two words are the same; in other words, whether the *r* be radical, and (if radical) why it is wanting in *am*. The facts which bear upon this will come in the sequel.

The A.S. form was *cart*:

'And Nathan said to David, Thou art the man.'—2 Samuel, xii. 7.

'As the husband is, the wife is: thou art mated with a clown,
And the grossness of his nature will have weight to drag thee down.'

Tennyson, *Locksley Hall*.

Is.—The copula in the third person singular. The fuller and older form was *is-t*: word for word the 1st of the modern German, the *est* of the Latin, the *esti* of the Greek, the *asti* of the Sanskrit. The A.S. form was *is*:

'All flesh is grass.'

Are.—The copula in plural number for all persons; *we are*, *ye are*, *they are*. Here the personal ending is wanting; the *-r* being the *r* in *ar-t*.

In A.S. the equivalents to *are* were of two kinds.

In the dialect of Wessex, or the West Saxon, the so-called verb substantive ran:

To eom = I am. Wi syndon = we are.
pu eart = thou art. Gi syndon = ye are.
He is = he is. Hi syndon = they are.

In the northern, or Northumbrian dialect, however, the plural was *wi*, *gi*, *hi aron*; the form *syndon*, or *synd*, (the German *seyn*.) being either rare or out of use.

From this it has been inferred that it is from the Northumbrian rather than the West-Saxon that the literary English is derived.

Again, as the West-Saxon and German forms are generally forms of *s-n*, whilst that root is rare in the Scandinavian languages, the form *are* is one of the words to which a Danish origin has been assigned, and that with a show of plausibility; the Scandinavian form being (in Danish)

Jag, du, han er = I am, thou art, he is,
Vi, I, de ere = We, ye, they are,

to the exclusion of any of the English or other variations.

The evidence that *am*, *art*, and *is* are the same word lies in the following table:—

Greek . . .	εἰμι.	εἶς.	ἐστί.
Latin . . .	sum.	es.	est.
Sanskrit . .	asmi.	asi.	asti.
Zend . . .	ahmi.	asi.	ashti.
Lithuanic .	esmi.	esi.	esti.
Old Slavonic	ysmy.	yesti.	gesty.
Russian . .	esm.	esi.	est.
Servian . .	yesam.	yesti.	yest.
Moso-Gothic	im.	is.	ist.
Icelandic .	em.	ert.	er.
English . .	am.	art.	is.

The derivation of what we must call the root of the forms *am*, *art*, *are*, and *is*, is a point upon which there are only hypotheses. All that the preceding instances have shown is that the root in question is *-s*, with some second sound attached to it. To this we may add that the same sound is the basis of one of the Demonstrative Pronouns, of which, in the modern English, *she* is the only representative. See *She*. Can the so-called verb substantive have been, in its origin, a demonstrative pronoun; so that *I am* is an abstraction from *I here*, or some allied notion? Mr. Garnet has given many cogent reasons in favour of this view, and I refer to his paper on the

subject for the clue to this very obscure etymon.]

Am. v. n. Exist.

For knowing that I am, I know thou art; Since that must needs exist, which can impart.

Prior.
For the proposition 'I am' no one who utters it can find any proof but the invariable existence of his belief in it.—Herbert Spencer, *Principles of Psychology*, b. iii. ch. ii.

Amability. s. [Fr. *amabilité*; from Lat. *amabilitas*.] Same as *Amiability*. *Obsolete*.

In all the course of virtuous meditation, the soul is like a virgin invited to a matrimonial contract; it inquires into the condition of the person, his estate and disposition, and other circumstances of *amability* and desire.—Jeremy Taylor, *Great Exemplar*, p. 60.

No rules can make *amability*; our minds and apprehensions made that; and so is our felicity.—Jeremy Taylor.

Amadou. s. [P?] German tinder.

The substance sold in the shops as *amadou*, or German tinder, is prepared from this as well as the preceding species [*Polyporus fomentarius* and *Polyporus ignarius*] by cutting the fungus in slices, beating it, and then soaking it in a solution of nitre, and afterwards drying it. When impregnated with gunpowder, it is called black *amadou*. *Amadou*, or German tinder, has been recommended by Mr. Weatherfield as an elastic medium for applying support and pressure, and as a defence to tender and delicate parts. It does not lose its elasticity like lint.—Pereira, *Elements of Materia Medica*.

Amain. adv. [A.S. *on mægne* = on main, might, or strength.] With energy.

Great lords, from Ireland am I come *amain*, To signify that rebels there are up.

Shakespeare, *Henry VI. Part II.* iii. 1.
The hills, to their supply,
Vapour and exhalation dusk and moist,
Sent up *amain*. Milton, *Paradise Lost*, xi. 740.
From hence the boar was roused, and sprung

Like lightning sudden, on the warrior train,
Beats down the trees before him; shakes the ground,
The forest echoes to the crackling sound. Dryden.

Amalgam. s. [Gr. *μαλagma* = anything emollient or softening, poultice.] Same as *Amalgama*, of which word it is the current form.

The induration of the *amalgam* appears to proceed from the new texture resulting from the coalescence of the mingled ingredients, that make up the *amalgam*.—Boyle.

Amalgama. s. Alloy in which one of the metals is mercury. *Obsolete*.

The retort brake,
And what was said was put into the Pellicane,
And sign'd with Hermes' seal.—I think 'twas so.
We should have a new *amalgama*.

B. Jonson, *Alchymist*, i. 3.
They have attempted to confound all sorts of citizens, as well as they could, into one homogeneous mass; and then they have divided this their *amalgama* into a number of incoherent republics. Burke.

Amalgamate. v. n. Unite by amalgamation.

Ingratitude is indeed their four cardinal virtues compacted and amalgamated into one.—Burke.

Amalgamation. s. Mixture by means of an amalgamation; close union.

Amalgamation is the mixing of mercury with any of the metals. The manner is thus in gold, the rest are answerable: Take six parts of mercury, mix them hot in a crucible, and pour them to one part of gold made red hot in another crucible; stir these well that they may incorporate; then cast the mass into cold water, and wash it.—Bacon.

The peculiarity in his case was the unusual defect of *amalgamation* and subordination: the highest lay side by side with the lowest: not morally combined with it and spiritually transfiguring it, but tumbling in half-mechanical juxtaposition with it, and, from time to time, as the mad alternation chanced, irradiating or eclipsed by it.—Carlyle, *Miscellaneous, Review of Boswell's Life of Johnson*.

But, in fact, the two hostile elements of which it consists have never been known to form a perfect *amalgamation*; and at length, in our own time, they have been completely and professedly separated.—Macaulay, *Essays, Hallam's Constitutional History*.

Amalgame. v. a. Mix metals by amalgamation. *Amalgamate. Rare*.

What is some three ounces of fresh materials?—Is't no more?—No more, Sir, of gold, to *amalgame*, with some six of mercury.—B. Jonson, *Alchymist*, i. 3.

Amalgaming. verbal abs. Amalgamation *Rare*.

That we had in our maters subliming,
And in *amalgaming*, and calcining
Of quicksilver.

Chaucer, *Canterbury Tales, Yeoman's Tale*.

Amanuensis. s. [Lat.] Person who writes what another dictates; or copies what has been written by another.

I had not that happy leisure; no *amanuensis*, no assistants.—Burton, *Anatomy of Melancholy, To the Reader*, 12.

In so many copies as have been made of the gospel, before printing was known; and considering the many translations of it into several languages, where the idioms are different, and the phrases may be mistaken; together with the natural slips of *amanuenses*; it is much more wonderful that there are no more various lections, than that there are so many.—Leslie, *Truth of Christianity*, 52.

The principal design of Bentley's notes is to prove that Milton's native text was vitiated by an infinite variety of licentious interpolations, and factitious readings, which, as he pretends, proceeded from the artifice, the ignorance, or the misapprehension, of an *amanuensis*, to whom Milton, being blind, had been compelled to dictate his verses.—T. Warton, *Preface to Milton's Smaller Poems*.

Dr. Parr, on his return to Halton, summoned to his aid the present writer, as an *amanuensis*.—Field, *Life of Dr. Parr*, i. 375.

Amaraeus. s. Plant so called. See *Shamrock*.

And at their feet the crocus brake like fire,
Violet, *amaracus*, and asphodel,
Lotos and lilies. Tennyson, *Enone*.

Amaranth. s. [Lat. *amaranthus*; from (P) Gr. *ἀ = not*, *μαραινω = wither*.] In *Poetry* Imaginary flower, supposed never to fade.

Immortal *amaranth*! a flower which once
In paradise, fast by the tree of life,
Began to bloom; but soon, for man's offence,
To heav'n remov'd, where first it grew, there grows,
And flowers aloft, shading the fount of life.
Milton, *Paradise Lost*, iii. 353.

Amaranthine. adj. Relating to *amaranth*s; consisting of *amaranth*s.

By the streams that ever flow,
By the fragrant winds that blow
O'er the Elysian flowers,
By those happy souls that dwell
In yellow meads of Asphodel,
Or *amaranthine* bowers. Pope.

Adieu to ravishing delights,
High raptures and romantic flights;
To Goddesses so heavenly sweet,
Expiring shepherds at their feet;
To silver meads and shady bowers,
Dressed up with *amaranthine* flowers. Swift.

Amartitude. s. [Lat. *amarus* = bitter.] Bitterness. *Rare*.

What *amartitude* or acrimony is deplored in cholera, it acquires from a commixture of melancholy, or external malign bodies.—Harvey, *Discourse of Consumptions*.

Amass. v. a.

1. Collect together in one heap or mass.

The rich man is not blamed, as having made use of any unlawful means to *amass* riches, as having thriven by fraud and injustice.—Bishop Atterbury, *Sermons*.

When we would think of infinite space, or duration, we, at first step, usually make some very large idea, as perhaps millions of ages, or miles, which possibly we double and multiply several times. All that we thus *amass* together in our thought is positive, and the assemblage of a great number of positive ideas of space or duration.—Locke.

2. Add one thing to another: (generally with some share of *reproach*, either of eagerness or indiscriminate).

Such as *amass* all relations, must err in some, and be unbeliever in many.—Sir T. Browne, *Vulgar Errors*.

Do not content yourselves with mere words, lest your improvements only *amass* a heap of unintelligible phrases.—Watts, *Improvement of the Mind*.

Amate. *v. a.* [from *mate*.] Accompany; entertain as a companion. *Obsolete.*

A lovely bery of fair ladies sate,

The which did them in modest wise amate,
And each one sought his lady to aggrate.

Spenser, Faerie Queen.

Amate. *v. a.* [from N.Fr. *amater* = weaken, depress.] Terrify; perplex; discourage; puzzle. *Obsolete.*

But in the porch, that did them sore amate,
A flaming fire ymixt with smouldry smoke
And stinking sulphure, that with griesly hate
And dreadful horror did all entrance choke,
Enforced them their forward footing to revoke.

Spenser, Faerie Queen.

When we are so easily dor'd and amated with every sophism, it is a certain argument of great defect of inward furniture and worth.—*Hales, Golden Remains*, 13.

Ye bene right hard amated, gracious lord,
And of your ignorance great mervell make,
Whiles cause not well conceived ye mistake.

Spenser, Faerie Queen.

Amateur. *s.* [Fr.] One who follows a pursuit from his love of it; rather than for the emolument which it brings: (opposed to professional).

It must always be, to those who are the greatest amateurs or even professors of revolutions, a matter very hard to prove, that the late French government was so bad, that nothing worse, in the infinite devices of men, could come in its place.—*Burke.*

He had been a very indifferent musical amateur in his better days; and when he fell with his brother, resorted for support to playing a clarionet as dirty as himself in a small Theatre Orchestra.—*Dickens, Little Dorrit*, ch. vi.

With interest, and in turn was wont with rigour
To exact of Cupid's bills the full amount
At sight.

Byron, Don Juan, ix. 62.

Amaurosis. *s.* [Gr.] Unsusceptibility to light from loss of nervous power in the retina.

But light may be freely admitted, and yet no vision ensue. The fault is in the nervous matter that should receive and transmit the impression. . . .

Amaurotic. *adj.* Pertaining to Amaurosis.

Mr. Lawrence's doctrine, that fulness and congestion of the vessels originally lead to the amaurotic affection, may be more correct than the theory which refers the blindness simply to weakness.—*Cooper, Surgical Dictionary*, voc. Amaurosis.

Behold! famine and plague, tribulation and anguish, are sent as scourges for *améndment*.—*2 Esdras*, xvi. 19.

5. Modification of a bill in Parliament.

The House resolved itself into a Committee. The great question was instantly raised: What provision should be made for the defence of the realm? It was naturally expected that the confidential advisers of the Crown would propose something. As they remained silent, Harley took the lead which properly belonged to them, and moved that the army should not exceed seven thousand men. Sir Charles Sedley suggested ten thousand. Vernon, who was present, was of opinion that this number would have been carried if it had been proposed by one who was known to speak on behalf of the King. But few members cared to support an *améndment* which was certain to be less pleasing to their constituents, and did not appear to be more pleasing to the Court than the original motion. Harley's resolution passed the Committee. On the morrow it was reported and approved. The House also resolved that all the seven thousand men who were to be retained should be natural born English subjects. Other votes were carried without a single division either in the Committee or when the matter was on the table.—*Macaulay, History of England*, ch. xxiv.

His was a frank playfulness, or *amenity* at least of manner, which Henry IV. never surpassed, and a blamelessness hardly ever before, till very recent times never after, seen on the throne of France.—*Milman, History of Latin Christianity*, b. xi. ch. i.

To this rare and important knowledge he added a sweetness and an *amenity* of temper which extorted the praises even of his political opponents.—*Buckle, History of Civilization in England*, vol. i. ch. vii.

When a party was thus placed at the mercy of the court it was the business of the 'afterors' appointed for that purpose to pay the amount of the *amercement*.—*Wedgwood, Dictionary of English Etymology*.]

I had rather be in this choice than throw *ames-ace* for my life.—*Shakespeare, All's well that ends well*, ii. 3.

But then my study was to cog the dice,
And dextrously to throw the lucky sice;
To shun *ames-ace*, that swept my stakes away;
And watch the box, for fear they should convey
False bones, and put upon me in the play. *Dryden*.

This will be yet clearer, by considering his own instance of casting *ambs ace*, though it partake more of contingency than of freedom. Supposing the posture of the party's hand who did throw the dice, supposing the figure of the table, and of the dice themselves, supposing the measure of force applied, and supposing all other things which did concur to the production of that cast, to be the very same

they were, there is no doubt that in this case the cast is necessary.—*Bishop Bramhall, Against Hobbes.*

The old *amity*, and more than the *amity*, something like a close league between the Sultan of Egypt and the Emperor Frederick, now appeared almost in its full maturity.—*H. Milman, History of Latin Christianity*, b. x. ch. iii.

The consternation of Rivers and Grey, of discovering the fatal snare into which they had fallen, may be readily imagined. They did their best, however, to conceal their emotion as together, and apparently in perfect *amity*, the four lords set off on horseback for Stony Stratford.—*J. H. Jesse, Memoirs of King Richard III*, ch. iii.

A treaty of *amity* was also concluded between the Sultan and the Venetians.—*Sir E. Creasy, History of the Ottoman Turks*, ch. iv.

Their cringings, crossings, censings, sprinklings, chrisms, Their conjurings, and spells, and exorcisms, Their motley habits, maniples, and stoles, Aibs, ammits, rochets, chimers, hoods, and cowls. *Oldham, Satire against the Jesuits*.

Ammonia. s. [from the Egyptian name of the god Jupiter Ammon; as coming from the country in which he was worshipped.] Volatile alkali.

It is probable that Pliny was acquainted with the smell of ammonia, and that the 'vehement odour' which he says arose from mixing lime with nitrum was produced by the action of lime on sal ammoniac.—*Pereira, Elements of Materia Medica*.

Ammoniac. s. Same as Ammoniacum.

Ammoniac is usually imported from Bombay; but occasionally it comes from the Levant.—*Pereira, Elements of Materia Medica*.

Ammoniac. adj. (generally following the substantive.) [from *ammonia* the alkali.] Same as Ammoniacal.

Ammoniacal. adj. Having the properties of ammoniac.

Human blood calcin'd yields no fixed salt; nor is it a sal *ammoniac*: for that remains immutabile after repeated distillations; and distillation destroys the *ammoniacal* quality of animal salts, and turns them alkaline: so that it is a salt neither quite fixed, nor quite volatile, nor quite acid, nor quite alkaline, nor quite *ammoniacal*; but soft and benign, approaching nearest to the nature of sal *ammoniac*.—*Arbutnot*.

Ammoniac gas is obtained by heating a mixture of one part powdered sal *ammoniac* and two parts of dry quicklime in a glass retort, and collecting the gas over mercury.—*Pereira, Elements of Materia Medica*.

Ammoniacum. s. [Lat.] Gum-resin so called.

The term *ammoniacum* has been applied to two different resins; one the produce of *Ferula tingitana*, the other of *Dorema ammoniacum*. They must make themselves defensible against strangers; and must have the assistance of some able military man, and convenient arms and *ammunition* for their defence.—*Bacon*.

would have pronounced fabulous.—*Macaulay, History of England*, ch. iii.

Amnesty. s. [Gr. ἀμνηστία.] Act of non-remembrance; oblivion.

Abraham, to procure an everlasting amnesty, and utter cessation thenceforth of all debate between himself and his nephew Lot and their servants, made use of this one argument, as the most prevalent of all other for that end, that they were brethren.—*Bishop Sanderson, Sermons*, p. 472.

I never read of a law enacted to take away the force of all laws, by which a man may safely commit upon the last of June what he would infallibly be hanged for if he committed it on the first of July; by which the greatest criminals may escape, provided they continue long enough in power, to anticipate their crimes, and, by stifling them a while, deceive the legislature into an amnesty.—*Swift*.

He had already given his consent to an act by which an amnesty was granted, with few exceptions, to all those who, during the late troubles, had been guilty of political offences.—*Macaulay, History of England*, ch. i.

Amolition. s. [Lat. *amolito*, -onis = removal or abolition of anything.] Removal; putting away. *Rare*.

Among. prep. Mingled with; placed with other persons or things on every side.

The voice of God they heard
Now walking in the garden, by soft winds
Brought to their ears, while day declin'd: they heard,
And from his presence hid themselves, *among*
The thickest trees, both man and wife.
Milton, Paradise Lost, x. 97.

There were, *among* the old Roman statues, several of Venus in different postures and habits; as there are many particular figures of her made after the same design.—*Addison*.

When the preposition *follows* its substantive, as it sometimes (more especially in poetry) does, an *adverbial* construction is simulated (see *Before*). In the following line it is not impossible that the sense of *among* may be *adverbial*:

I've been plucking plants *among*,
Hemlock, henbane, adder's tongue. *B. Jonson.*

Amongst. prep. Same as *Among*.

Amongst strawberries sow here and there some borage-seed: and you shall find the strawberries under those leaves far more large than their fellows.—*Bacon*.

Because that a lover is one that is indeed false in love; but an *amorist* is one that is inclined to this folly.—*Ferrand, Love Melancholy*, p. 139.

Female beauties are as fickle in their faces as their minds; though casualties should spare them, age brings in a necessity of decay; leaving doters upon red and white, perplexed by uncertainty both of the continuance of their mistress's kindness, and her beauty, both which are necessary to the *amorist's* joys and quiet.—*Boyle*.

1. Partaking of two natures: (so as to live in two elements, air and water).

A creature of amphibious nature.

On land a beast, a fish in water. *Butler, Hudibras.*

Those are called amphibious, which live freely in the air, upon the earth, and yet are observed to live long upon water, as if they were natural inhabitants of that element; though it be worth the examination to know, whether any of those creatures that live at ease and by choice a good while, or at any time, upon the earth, can live a long time together perfectly under water. *Locke.*

Fishes contain much oil, and amphibious animals participate somewhat of the nature of fishes, and are oily. *Arbutnot, On the Nature and Choice of Aliments.*

In defining obvious appearances, we are to use what is most plain and easy; that the mind be not misled by amphibologies into fallacious deductions. *Glanville, Scepis Scientifica.*

Making difference of the quality of the offence may (say they) give just ground to the accused party either to conceal the truth, or to answer with such amphibolies and equivocations as may serve to his own preservation. *Bishop Hall, Cases of Conscience.*

Amphibrach. *s.* [Gr. ἀμφί = on both sides, βραχύς = short.] In Prosody. Foot of the formula — — in the Latin and Greek languages.

'To endeavour preserving' is not grammar. It should be, 'to endeavour to preserve,' or if, in order to avoid the two infinitives, and the repetition of the particles, another mode should be preferred, it ought to be, 'to endeavour the preserving of this temper,' &c. The arrangement of the words as they now stand has a very bad effect on the ear, 'endeavour preserving this temper among them,' from four successive amphibrachs, with the accent four times repeated on the middle syllable of three in each foot, which give the sentence the air of a comic canting verse. *Sheridan, Note to Swift's Examiner, no. 24.*

Conceive a man placed in the burning iron chair at Lyons, amid the insults and mockeries of a crowded amphithæatre, and still keeping his seat; or stretched upon a grate of iron, over coals of fire, and breathing out his soul, among the exquisite sufferings of such a tedious execution, rather than renounce his religion. *Addison.*

Was never yet seen in our amphithæatres. *Byron.*

crease our knowledge. They are also called synthetic, from placing together two notions not hitherto associated. For example, 'all bodies possess power of attraction' is an ampliative judgement, because we can think of bodies without thinking of attraction as one of their immediate primary attributes. But, if our knowledge of any object were complete, we should conceive it invested with all its attributes, and no ampliative judgements would be required. *Thompson, Laws of Thought, § 81.*

Thinking, under this condition, is ampliative or synthetic. *Sir W. Hamilton, Discussions, p. 529.*

Amplification. *s.* [Fr. amplification; Lat. amplificatio, -onis.]

To attempt by mere logical knowledge to amplify a science is an absurdity. . . . But though logic cannot extend, cannot amplify a science by the discovery of new truths, it is not to be supposed that it does not contribute to the progress of science. *Sir W. Hamilton, Logic, lect. ii. l. 44.*

Anagram, *s.* [Gr. ἀνα = back, in change, γράμμα = letter.] Conceit arising from the letters of a name transposed: (as this of William Noy, attorney-general to Charles I., a very laborious man, *I moyl in law*).

Anagram, called 'a divination by names, [is] called by the antients Onomantia.' The Greeks refer this invention to Lycophron—afterwards there were divers Greek wits that disported themselves herein, as he which turned Atlas, for his heavy burthen in supporting heaven, into Talas, that is, wretched. Some will maintain, that each man's fortune is written in his name, which they call Anagrammatism, or Metagrammatism.—*Explanation of Hard Words, Academy of Pleasure*: 1638.

Though all her parts be not in th' usual place,
She hath yet the *anagrams* of a good face:
If we might put the letters but one way,
In that lean dearth of words, what could we say?

Thy genius calls thee not to purchase fame
In keen iambicks, but mild *anagram*.

The idea that the Lady Eleanor Davys was a prophetess, arose from finding that the letters of her name twisted into an *anagram*, might be read in this line, 'Reveal, O Daniel.' Her prophetic pride was, however, somewhat rebuked by one of the king's privy council, who having occasion to reprove her for venting some mischievous, political predictions, by a suitable exordium in the star-chamber, very wittily attacked her with her own weapons, by assuring her that the letters which composed her name she had not rightly construed; for the real *anagram* should be read thus: 'Dame Eleanor Davys'—'Never so mad a lady.'—*Agnes Strickland, Lives of the Queens of England, Henrietta Maria*.

The only quintessence that hitherto the alchymy of wit could draw out of names, is *anagrammatism*, or metagrammatism, which is a dissolution of a name truly written into his letters, as his elements, and a new connexion of it by artificial transposition, without addition, subtraction, or change of any letter into different words, making some perfect sense applicable to the person named.—*Camden*.

Analogical, *adj.*

1. Used by way of analogy.

It is looked on only as the image of the true God, and that not as a proper likeness, but by *analogical* representation.—*Bishop Stillingfleet*.

When a word which originally signifies any particular idea or object, is attributed to several other objects, not by way of resemblance, but on the account of some evident reference to the original idea, this is peculiarly called an *analogical* word: so a sound or healthy pulse, a sound digestion, sound sleep, are so called, with reference to a sound and healthy constitution: but if you speak of sound doctrine, or sound speech, this is by way of resemblance to health, and the words are metaphorical.—*Watts, Logic*.

Let it be remarked that *analogical* reasoning is the antipode of demonstrative reasoning, not only in its uncertainty, but also in the dissimilarity of the objects whose relations it recognises.—*Herbert Spencer, Principles of Psychology*, pt. ii. ch. vi.

2. Analogous; having resemblance or relation.

There is placed the minerals between the inanimate and vegetable province, participating something *analogical* to either.—*Sir M. Hale, Origination of Mankind*.

More, Antidote against Idolatry*, p. 16.

I am convinced, from the simplicity and uniformity of the Divine Nature, and of all his works, that there is some one universal principle running through the whole system of creatures *analogically*, and congruous to their relative natures.—*Cheyne*.

Analogous, *adj.* Having analogy; bearing some resemblance or proportion; having something parallel.

ANALOGOUSLY ANALYZER

Many important consequences may be drawn from the observation of the most common things, and analogous reasonings from the causes of them.—*Arbutnot.*

Analogously. adv. In an analogous manner.

Can you, then, demonstrate from his unity or omnipresence, which you conceive but *analogously* and imperfectly, that there cannot be such a distinction in his incomprehensible nature, as may be figured and represented to us by the personal distinction of man from man?—*Skellon, Deism revealed*, dial. 8.

Analogy. s. [Gr. *ἀναλογία*.] Relation between ratios; proportion; relation in general.

From God it hath proceeded that the church hath evermore held a prescript form of common prayer, although not in all things every where the same, yet, for the most part, retaining the same *analogy*.—*Hooker.*

Homology cannot consist with such diversities as these; and therefore the gastric teeth of the Crustacea have no true *analogy* with the jaws of the Rotifera.—*Gosse, Philosophical Transactions*, cxlvi. 11.

Horace has been ridiculed by some shrewd critics for this comparison, which, however, we think is more defensible than the former. Addressing himself to Munatius Plancus, he says:—

Albus ut obscuro deterget nubila coelo
Sepe Notus, neque parturit imbres
Perpetuos: sic tu sapiens finire memento
Tristitiam vitæque labores
Molli, Plance, mero, &c.

The *analogy*, it must be confessed, is not very striking: but, nevertheless, it is not altogether devoid of propriety: The poet reasons thus: as the south wind, though generally attended with rain, is often known to dispel the clouds, and render the weather serene; so do you, though generally on the rack of thought, remember to relax sometimes, and drown your cares in wine. As the south wind is not always moist, so you ought not always to be dry.—*Goldsmith, Essays*, 17.

With to.

Analysis. s. [Gr. *ἀνάλυσις*=resolution.]

1. Resolution of a compound body into the several parts of which it consists; division; separation.

There is an account of dew falling, in some places, in the form of butter or grease, which grows extremely fetid: so that the *analysis* of the dew of any place, may, perhaps, be the best method of finding such contents of the soil as are within the reach of the sun.—*Arbutnot.*

We cannot know anything of nature but by an *analysis* of its true initial causes; till we know the first springs of natural motions we are still but ignorants.—*Glanville.*

But an extension of any science by logic is absolutely impossible; for by conforming to logical canons we acquire no knowledge—receive nothing new—but are only enabled to render what is already obtained more intelligible by *analysis* and arrangement.—*Sir W. Hamilton, Logic*, lect. ii. i. 44.

In life, as we actually experience it, motives slide one into the other, and the most careful *analysis* will fail adequately to sift them.—*Froude, History of England*, ch. xi.

2. Opposite to Synthesis.

a. As a correlative, i.e. as applying to the same things under different aspects.

The process of pulling a substance to pieces, of unloosing the connexion of its constituent parts, in order to examine it piecemeal, is called *analysis*. The process of putting together again the same ingredients, so as to reproduce the body analyzed, is called *synthesis*.—*Daniell, Introduction to Chemical Philosophy*, p. 422.

ANAL

b. As applied to different objects.

In *Mathematics*. Algebra rather than Geometry.

In geometrical reasoning such as we have described, we introduce at every step some new consideration; and it is by combining all these considerations, that we arrive at the conclusion, that is, the demonstration of the proposition. Each step tends to the final result, by exhibiting some part of the figure under a new relation. To what we have already proved, is added something more; and hence this process is called Synthesis, or putting together. . . . We may take the proposition of which we require a proof, and may examine what the supposition of its truth implies. If this be true, then something else may be seen to be true; and from this, something else, and so on. We may often, in this way, discover of what simpler propositions our theorem or solution is compounded, and may resolve these in succession, till we come to some proposition which is obvious. This is geometrical *Analysis*. . . . Since in our symbolical reasoning our symbols thus reason for us, we do not necessarily here, as in geometrical reasoning, go on adding carefully one known truth to another, till we reach the desired result. On the contrary, if we have a theorem to prove or a problem to solve which can be brought under the domain of our symbols, we may at once state the given but unproved truth, or the given combination of unknown quantities, in its symbolical form. After this first process, we may then proceed to trace, by means of our symbols, what other truth is involved in the one just stated, or what the unknown symbols must signify; resolving step by step the symbolical assertion with which we began, into others more fitted for our purpose. The former process is a kind of synthesis, the latter is termed *analysis*. And although symbolical reasoning does not necessarily imply such *analysis*, yet the connexion is so familiar, that the term *analysis* is frequently used to designate symbolical reasoning.—*Whewell, History of Scientific Ideas*, b. ii. ch. xii.

Another species of imperfectly quantitative reasoning occupies a position in mathematical *analysis*, like that which the foregoing species does in mathematical synthesis.—*Herbert Spencer, Elements of Psychology*, pt. ii. ch. iii.

In *Philology*. Condition of a language in which inflections are displaced by prepositions and auxiliary verbs.

An *analysis* conducted in a truly systematic manner, must commence with the most complex phenomenon of the series to be analysed: must seek to resolve these into the phenomena that stand next in order of complexity; must proceed in like fashion with the less complex phenomena thus disclosed; and so, by successive decompositions, must descend, step by step, to the simpler and more general phenomena, reaching at last the simplest and most general. As applied to Psychology, this mode of procedure, though, perhaps, if patiently pursued the best in its results, is beset with difficulties.—*Herbert Spencer, Elements of Psychology*, pt. ii. ch. i.

Analyst. s. One who analyzes.

You, who are a skilful computist or *analyst*, may not therefore be deemed skilful in anatomy.—*Bishop Berkeley, Analyst*, § 53.

The employment of modern *analysts*, however useful in mathematical calculations and constructions, doth not habituate the mind to apprehend clearly and infer justly.—*Ibid.*, § 49.

Analytic. adj. After the manner of analysis.

It was, in fact, the conversion of an inflectional into a non-inflectional, of a synthetic into an *analytic* language. It may be, that a synthetic tongue is essentially a nobler and more effective instrument of expression than an *analytic* one; but, perhaps, the comparison has been too commonly made between the synthetic tongue in its perfection, and the *analytic* one while only in its rudimentary state. Even if it be inferior upon the whole, and for the highest purposes, an *analytic* language may perhaps, have some recommendations which a synthetic one does not possess. It may not be either more natural, or properly speaking, more simple, for the original constitution of most, if not of all, languages seems to have been synthetic; and a synthetic language is as easy both to acquire and to wield as an *analytic* one, to those to whom it is native. Nor can the latter be said to be more rational or philosophical than the former; for, as being, in the main, natural products, and not artificial contrivances, languages must be held to stand all on an equality in respect to, at least, the reasonableness of the principle on which they are constituted; but yet, if comparatively defective in poetical expressiveness, *analytic* languages will probably be found, whenever they have been sufficiently cultivated, to be capable, in pure exposition, of rendering thought with superior minuteness and distinctness of detail.—*Craik, History of English Literature*, i. 137.

Analytic method takes the whole compound as it finds it, whether it be a species or an individual, and leads us into the knowledge of it, by resolving into its first principles, or parts, its generic nature, and its special properties; and therefore it is called the method of resolution.—*Watts, Logic*.

ANAL

Thought, I showed, could be viewed, by an *analytic* abstraction, on two sides or phases.—*Sir W. Hamilton, Logic*, lect. ii. i. 21.

Analytic. s. Analytic method.

I cannot edify how, or by what rule of proportion, that man's virtue calculates, what his elements are, nor what his *analytically*.—*Milton, Tetrachorden.*

He was in logic a great critic,

Profoundly skill'd in *analytic*. *Butler, Hudibras.*
Your rant at *analytically*, like dogs barking at the moon, hurts no body but yourself. That art will live, when you are dead; and those that know it, will not think it ever a whit the worse for your not understanding it, or railing at it.—*Wallis, Correction of Hobbes*, § 12.

Of a long time I have suspected, that these modern *analytically* were not scientific.—*Bishop Berkeley, Analyst*, § 50.

Thus it appears that Aristotle possessed no single term by which to designate the general science of which he was the principal author and finisher. *Analytic* and apodeictic, with topic (equivalent to dialectic and including sophistic), were so many special names by which he denoted particular parts or particular applications of logic.—*Sir W. Hamilton, Logic*, lect. i. i. 8.

Analytical. adj. Resolving anything by means of analysis.

This complaint has often been made by chemical students, who are wearied with descriptions of oxygen, hydrogen, and other invisible elements, before they have any knowledge respecting such bodies as commonly present themselves to the senses. And accordingly some teachers of chemistry obviate, in a great degree, this objection by adopting the *analytical*, instead of the *synthetical*, mode of procedure, when they are first introducing the subject to beginners. The *synthetical* form of teaching is indeed sufficiently interesting to any one who has made considerable progress in any study; but the *analytical* is the more interesting, easy, and natural kind of introduction, as being the form in which the first invention or discovery of any kind of system must originally have taken place.—*Whately, Elements of Logic*, introd.

Either may be probably maintained against the inaccuracy of the *analytical* experiments vulgarly relied on.—*Boyle, Sceptical Chemist.*

Descartes hath here infinitely outdone all the philosophers that went before him, in giving a particular and *analytical* account of the universal fabric; yet he intends his principles but for hypotheses.—*Glanville, Sceptis Scientifica.*

In *Language*. See *Synthetic*.

It has been supposed that even the classical Greek and Latin, such as we find it in books, may have always been accompanied each by another form of speech, of looser texture, and probably more of an *analytical* character, which served for the ordinary intercourse of the less educated population, and of which it has even been conjectured we may have some much disguised vestige or resemblance in the modern Roman and Italian.—*Craik, History of English Literature*, i. 138.

Analytically. adv. By means of analysis.

I have seen sketches and rough draughts of some poems to be designed, set out *analytically*.—*Oldisworth, in Johnson's Life of Smith.*

In *Logic*.

Logic can, at best, only *analytically* teach how to discover, that is, by the development and dismemberment of what is already discovered.—*Sir W. Hamilton, Logic*, lect. ii. i. 36.

Analyzable. adj. Capable of being analyzed.

The relations being perfectly independent and distinct, the mental processes into which they enter are more readily *analyzable*.—*Herbert Spencer, Elements of Psychology*, pt. ii. ch. iii.

Analyze. v. a. Resolve a compound into its first principles.

a. *Material compound.*

Chymistry enabling us to depurate bodies, and, in some measure, to *analyze* them, and take asunder their heterogeneous parts, in many chymical experiments, we may, better than in others, know what manner of bodies we employ; art having made them more simple, or uncompounded, than nature alone is wont to present them us.—*Boyle.*

b. *Mental compound.*

When the sentence is distinguished into subject and predicate, proposition, argument, act, object, cause, effect, adjunct, opposite, &c., then it is *analyzed* *analytically* and *metaphysically*. This last is what is chiefly meant in the theological schools, when they speak of *analyzing* a text of scripture.—*Watts, Logic.*

When sympathy is in action, we may, by *analyzing* our idea of it, reduce it to five different heads, and may classify it as continued, or contiguous, or remote, or similar, or dissimilar.—*Buckle, History of Civilization in England*, vol. ii. ch. v.

Analyzer. s.

This appointment of the great Author of nature is clearly revealed, and well understood by the true

analyse, however naturalists may value themselves on the discovery.—*Student*, ii. 380.

2 That which has the power of analyzing.

Particular reasons incline me to doubt, whether the fire be the true and universal *analyser* of mixt bodies.—*Boyle*.

Anamórhosis, or Anamórphosis. s. [Gr. *áná* = again, *μόρφη* = form.] Repetition of the same form.

The English and Chinese are equally poor in inflections; the former because it has lost, the latter because it has never evolved them. Yet they differ in character. There is not such a thing as a true *anamorphosis* in language.—*Dr. R. G. Latham, Elements of Comparative Philology*, ch. ult.

If, however, all cephalous mollusks, i. e. all Cephalopoda, Gasteropoda, and Lamellibranchiata, be only modifications by excess or defect of the parts of a definite archetype, then I think it follows, as a necessary consequence, that no *anamorphism* takes place in the group. There is no progression from a higher to a lower type; but merely a more or less complete evolution of one type. . . It may, indeed, be a matter of very grave consideration whether true *anamorphosis* ever occurs in the whole animal kingdom.—*Huxley, Morphology of the Cephalous Mollusca, Philosophical Transactions*, cxliii. 1.

Anán. adv. Anon.

Go to, little blusht, for this, *anan*,
You'll steal forth a laugh in the shade of your fan.
B. Jonson, Entertainments.

Anán! interj. This is a common expression amongst the Irish and some of the English peasantry, when they do not understand, or have not heard, what was said; in which sense it is probably used in the following extract. *Colloquial, vulgar.*

The poets imag'd in the golden age.
Thomson, Seasons, Summer.

Anapest. s. [Gr. *ἀναπαιστός*.] Metrical foot containing two short syllables followed by one long = *υυ*—, *ἀνιόν*; *peditum*.

The feet that principally enter into the composition of Greek and Latin verses are either of two or three syllables; those of two syllables are either both long, as the spondee, or both short as the pyrrhic; or one short and the other long as the iambic; or one long and the other short, as the trochee. Those of three syllables are the dactyl, of one long and two short syllables; the *anapest* of two short and one long; the tribrachium of three short; and the molossus of three long. . . Thus Spenser, Shakespear, Milton, Dryden, Pope, and all our poets abound with dactyls, spondees, trochees, *anapests*, &c.—*Goldsmith, Essay* 10.

In this manner, opinions on moral or political subjects are multiplied, the authority of sound and scientific principles is weakened, the judgment of the public is distracted and perplexed, the difficulty of a selection of safe guides is increased, and an *anarchical* state of public opinion is created.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iii.

Anarchism. s. Confusion; want of government.

I do look upon this bill as upon the gasping period of all good order: it will prove the mother of absolute *anarchism*.—*Sir E. Dering, Speeches*, p. 153.

—*Anastrophe*, or inversion, is a figure by which we place last, and perhaps at a great distance from the beginning of the sentence, what, according to the common order, should have been placed first. Plural Greek.

The *anathemata* of the church sometimes denote more particularly those gifts, which were hanged upon pillars, and set in public view, as memorials of some great mercy which men had received from God. In allusion to which, Socrates thinks the term *anathema* is used for excommunication, because thereby a man's condemnation is published and proclaimed, as if it were hanged up upon a pillar.—*Christian Antiquities*, i. 248.

Plural English.

Between them the two families got a great portion of her private savings out of her: and finally she fled to London followed by the *anathemas* of both, and determined to seek for servitude again as infinitely less onerous than liberty.—*Thackeray, Vanity Fair*.

Andabatism. s. [Lat. *andabata* = gladiator who fought hood-winked.] Ambiguity; uncertainty. *Rare*.

To state the question, that we might not fall to *andabatism*, we are to understand, that as there be two kinds of perfection, one of our way, the other of our country to which we are travelling: so there are two kinds also of fulfilling God's law, one of this life, the other of the next.—*Shelford, Learned Discourses*, p. 121: 1635.

Andante. adj. In Music. With a slow movement.

Another good purpose, which must be derived from such a practice is, that then would not appear to us so enormous the great variety and disproportion, now observable in the *andamento* of the recitative, and that of the airs; but, on the contrary, a more friendly agreement among the several parts of an opera would be the result. The connoisseurs have been often displeased with those sudden transitions, where, from a recitative in *andantissimo* and gentlest movement, the performers are made to skip off and bound away into ariettas of the briskest execution; which is to the full as absurd as if a person, when soberly walking, should all on the sudden set to leaping and capering. *Andamento*, *andante*, *andantissimo*, from the Italian word *andare*, to go, signify that the notes (especially in the thorough basses) are to be played distinctly and slow, from a less to a greater degree.—*Translation of an Essay on the Opera*, by Count Algarotti.

the table was laid out when wanted; the table dormant, or permanent table, which was probably even then an article of rarer occurrence; benches, as the ordinary seats; a long settle to draw up to the fire, or to place on the dais, behind the high table; a chair, for ceremonious occasions, and a stool; a cushion for the chair; bankers and dossers, or carpets to lay over the principal seats; a screen; a basin and laver, for washing the hands of the guest; and *andirons* to support the fire, tongs to arrange it, and bellows to raise it into flame.—*Remark by Editor in Preface, Volume of Vocabularies. Edited by T. Wright.*

[*Andiron*.—Originally the iron bars which supported the two ends of the logs on a wood fire. A.S. *brand-isen*, brand-iron. But this could never have been converted into *andiron*. The Mid Lat. has *andena*, *andela*, *andeda*, *andaria*; Fr. *tandier*, grand chenet de cuisine. Dict. Wallon. The Flemish *wend-tijser* probably exhibits the true origin from *wenden*, to turn.—*Landor*. Gall. *tandier*, Lat. *versutium*; item *hec andena*. Catholicism arm. in Duc. In modern English the term has been transferred to moveable fire-irons.—*Wedgwood, Dictionary of English Etymology.*]

Androgynous. adj. [*ἀνδρόγυνος* = of the nature of an *androgyne*.] In Biology. With the characteristics of both sexes in a single individual.

The fissiparous mode of generation is no longer witnessed, and these animals have been considered to be, for the most part, *androgynous*, or capable of producing ova without the co-operation of two individuals; nevertheless, from recent observations, it would appear that their bisexuality can no longer be a matter of doubt.—*L. Jones, Outline*, ch. i.

His love of the French language was of a peculiar kind. He loved it as having been for a century the vehicle of all the polite nothings of Europe, as the sign by which the freemasons of fashion recognised each other in every capital from Petersburg to Naples, as the language of raillery, as the language of *anecdotes*, as the language of memoirs, as the language of correspondence.—*Macaulay, Essays, Walpole's Letters*, p. 268.

ANELLID }
ANGER

ANELL

Anellid. s. Ringed worm. See *Annelose*.

Most insects, however, commence their career as worms; the high form which they are ultimately destined to attain in the articulate series is at first masked by the guise of an *Anellid* or Entozoon.—*Queen, Lectures on Comparative Anatomy*, lect. xvi.

Anémomy. s. [Gr. ἀνέμων.] Windflower.

Growths of jasmine turn'd
Their humid arms festooning tree to tree,
And at the root thro' lush green grasses burn'd
The red *anémomy*.

Tennyson, A Dream of Fair Women.

[It was on the analogies of *orator*, &c., that the English pronunciation of the Greek word ἀνέμων was stated to be *anémomy*. Now to take a word derived from the Latin, and to look to its original quantity only, without consulting the analogy of other words similarly derived, is to be neglectful of the analogies of our own language and attentive only to the quantities of foreign ones. There is of the word *lens* a plural number, and this plural number is the English form *lenses*, and not the Latin form *lentes*. The existence of an English inflection proves that the word to which it belongs is English, although its absence does not prove the contrary. That the word *anémomy* is English (and consequently pronounced *anémomy*) we know from the plural form, which is not *anémomata* but *anémomies*.—*Dr. R. G. Latham, English Language, Orthoëpy*.]

The author would now write *anémomies* (with an *i*), the singular being as given above.

Áneurism. s. [Fr. *aneurisme*; from Gr. ἀνευρυσμός = widen.] Giving way of the middle coat of an artery, with the bulging arising therefrom, and the chance of its breaking.

He, moreover, introduced what is probably the most capital improvement in surgery ever effected by a single man: namely, the practice in *aneurism* of tying the artery at a distance from the seat of disease. This one suggestion has saved thousands of lives; and both the suggestion, and the first successful execution of it, are entirely owing to John Hunter, who, if he had done nothing else, would, on this account alone, have a right to be classed among the principal benefactors of mankind.—*Buckle, History of Civilization in England*, ii. 575.

Anéw. adv. [on *new*.] Over again; another time; afresh.

Into the utmost *angle* of the world.

Spenser, Faerie Queen, iii. 9. 27.

2. In *Geometry*. Space determined by the meeting of two straight converging lines.

Though there can be no direct quantitative relation between a side and an *angle*, yet, by being contained between the two lesser sides, the greater *angle* is put in indirect quantitative relation with the greater side. — *Herbert Spencer, Principles of Psychology, pt. ii. ch. 5.*

To illustrate this subject, Reid uses the fiction of a nation whom he terms the Idomenians, who have no sense except that of sight. He describes their notions of the relations of space as being entirely different from ours. The axioms of their geometry are quite contradictory to our axioms. For example, it is held to be self-evident among them that two straight lines which intersect each other once, must intersect a second time; that the three *angles* of any triangle are greater than two right *angles*; and the like. These paradoxes are obtained by tracing the relations of lines on the surface of a concave sphere, which surrounds the spectator, and on which all visible appearances may be supposed to be presented to him. — *Whevell, History of Scientific Ideas, b. ii. ch. vi.*

There exist no points without magnitude; no lines without breadth, nor perfectly straight; no circles with all their radii exactly equal, nor squares with all their *angles* perfectly right. — *Mill, System of Logic, b. i. ch. v. § 1.*

Angle. *s.* [from A.S. *angul* = hook.] Fishing-rod.

She also had an *angle* in her hand; but the taker was so taken, that she had forgotten taking. — *Sir P. Sidney.*

Give me mine *angle*,—we'll to the river: there,
 My musick playing far off, I will betray
 Tawny-finn'd fishes.

Shakespeare, Antony and Cleopatra, ii. 5.
 [Chaucer has *angle-hook*, shewing that the proper meaning of the word was then lost, and by a further confusion it was subsequently applied to the rod:
 'A fisher next his trembling *angle* bears.' (Pope).
 — *Wedgwood, Dictionary of English Etymology.*]

Angle. *v. n.*

 This seeming brow of justice, did he win
 The hearts of all that he did *angle* for.

Shakespeare, Henry IV. Part I. iv. 3.
 The pleasant'st *angling* is to see the fish
 Cut with her golden oars the silver stream,
 And greedily devour the treacherous bait;
 So *angle* we for Beatrice.

Id., Much Ado about Nothing, iii. 1.
 No solemn, antique gentleman of rhyme,
 Who having *angled* all his life for fame,
 And getting but a nibble at a time,
 Still fassily keeps fishing on, the same
 Small 'Triton of the minnows,' the sublime
 Of mediocrity, the furious tame,
 The echo's echo, usher of the school
 Of female wits, boy bards—in short, a fool!
Byron, Beppo, 73.

Animal, s. [Lat. *animal*; from *anima* = spirit.] That which has animal life: (as opposed to *spiritual* on the one side, and *vegetable* on the other).

Nothing seems easier than to distinguish a plant from an *animal*, and in common practice as regards the more obvious members of both kingdoms no distinction is easier; yet as the knowledge of their nature has advanced the difficulty of defining them has increased, and seems now to be insuperable. Not that the lack of such power of definition is any loss to the naturalist, if he has gained, instead, a truer conception of the fundamental unity of all organic nature.—*Owen, Lectures on Comparative Anatomy*, iv. 2.

The irresistible and constant apprehension of a purpose in the forms and functions of *animals* has introduced into the writings of speculators on these subjects various forms of expression, more or less precise, more or less figurative; as, that '*animals* are framed with a view to the part which they have to play,'—that '*nature* does nothing in vain,'—that she employs the best means for her ends; and the like. However metaphorical or inexact any of these phrases may be in particular, yet, taken altogether, they convey, clearly and definitely enough to preclude any serious error, a principle of the most profound reality and of the highest importance in the organic sciences.—*Whewell, History of Scientific Ideas*, b. ix. ch. vi. § 15.

Animal, adj. Belonging or relating to animals.

There are things in the world of spirits wherein our ideas are very dark and confused; such as their union with *animal* nature, the way of their acting on material beings, and their converse with each other.—*Watts, Logic.*

Its recognition is chiefly owing to the rapid advance of *animal* chemistry, and to improvements in the microscope. For, by the employment of these resources, it has become manifest, that the red globules, the respiratory process, the production of *animal* heat, and the energy of the locomotive organs, are but different parts of a single scheme.—*Buckle, History of Civilization in England*, ii. 558.

Animalcular, adj. Relating to animalcules; belonging to animalcules.

Animalcule, s. Microscopic animal.

The ciliated spores of the algae; the simplest of the ciliated *animalcules*; the most regular of the compound ciliated organisms, as the *Volvox* globator; together with the sponges and their allies; may be instanced as this order of life.—*Herbert Spencer, Principles of Psychology.*

The most minute forms, as the species called *Monas crepusculus*, Ehr., have been estimated at the $\frac{1}{1000}$ of a line in diameter. Of such infusoria a single drop of water may contain five hundred millions of individuals,—a number equalling that of the whole human species now existing upon the surface of the earth. But the varieties in the size of these invisible *animalcules* are not less than that which prevails in almost every other natural class of animals: from the minutest monad to the larger species of *Loxodes* or *Amphileptus*, which are one sixth or one fourth of a line in diameter, the difference of size is greater than between a mouse and an elephant. Within such narrow bounds might our ideas of the range of size in animals be limited, if the sphere of our observation was not augmented by artificial aids!—*Owen, Lectures on Comparative Anatomy*, lect. ii.

Animalculine, adj. Same as *Animalcular*.

Animalculine putrefaction is the immediate cause of those diseases.—*Dr. Dwight, Travels in New England*, i. 438.

Animalish, adj. Of an animal nature. *Rare.*

From whence it is concluded that there is no life, soul, nor understanding acting the whole world, because the world hath no blood nor brains, nor any *animalish* or humane form.—*Cudworth, Intellectual System.*

ANIM

Animality, s. State of animal existence.

All the parts serving in any wise to *animality* must be suddenly and irrecoverably smitten, and cease from their several uses.—*Smith, Portrait of Old Age*, p. 222.

What are they? animals or vegetables? or something betwixt and between? The first impression of any casual observer would be to declare in favour of their *animality*.—*Slack, Marvels in Pond Life*, ch. ii.

Animalization, s. Act of converting into animality.

The raw material of this restoration is derived from without: the alimentary canal, in which the conversion and *animalisation* of the food take place, is provided, in the Vertebrata, with two apertures, an entry or mouth, and an excremental outlet.—*Owen, Lectures on Comparative Anatomy*, introd. lect.

Animalized, part. adj. Converted into animal matter.

Now we are acquainted with the antiseptic virtue of the gastric fluid, the disgusting manners of vultures ought no longer to surprise us, for the food, however putrid, must be totally changed before it is converted into nutriment and *animalized*.—*Translation of Spallanzani*, i. 346. (Ord MS.)

Animant, adj. Quickening; giving the character of life or soul. *Rare.*

The pagans really accounted that only for a god, by the worshipping and invoking whereof they might reasonably expect benefit to themselves, and, therefore, nothing was truly and properly a god to them, but what was both substantial and also *animant* and intellectual.—*Cudworth, Intellectual System.*

Animastic, s. Doctrine of the soul; psychology. *Rare.*

The other schoolmen, again, who maintained that the object of Logic was thought in its processes of simple apprehension, judgement, and reasoning, (three, two, or one,) carefully explained that these operations were not in their own nature proposed to the logician; for, as such, they belonged to *Animastic*, as they called it, or Psychology.—*Sir W. Hamilton.*

Animate, v. a. [Lat. *animatus* = endowed with *anima*, or spirit.]

1. Quicken; make alive; give life to; heighten the energy of anything.

He was *animated* to expect the papacy, by the prediction of a soothsayer, that one should succeed Pope Leo whose name should be Adrian.—*Bacon.*

Animate, adj. Alive; possessing animal life.

All bodies have spirits and pneumatical parts within them; but the main differences between *animate* and *inanimate* are two: the first is, that the spirit of things *animate* are all contained within themselves, and are branched in veins and secret canals, as blood is; and in living creatures, the spirits have not only branches, but certain cells or seats, where the principal spirits do reside, and whence to the rest do resort; but the spirits in things *inanimate* are shut in and cut off by the tangible parts, and are not pervious one to another as air is in snow.—*Bacon.*

Nobler birth
Of creatures *animate* with gradual life,
Of growth, sense, reason, all summ'd up in man.—*Milton, Paradise Lost*, ix. 112.

There are several topics used against atheism and idolatry; such as the visible marks of divine wisdom and goodness in the works of the creation, the vital union of souls with matter, and the admirable structure of *animate* bodies.—*Bentley.*

Every acre of soil was *animate*, so to speak, with duties and privileges, which had attached to it from time immemorial, and could not be lost.—*C. H. Pearson, The early and middle Ages of England*, ch. xxxiv.

Animated, part. adj.

1. Endued with animal life.

Some of the *animated* substances have various organic or instrumental parts, fitted for a variety of motions from place to place, and a spring of life within themselves, as beasts, birds, fishes, and insects; these are called *animals*.—*Watts, Logic.*

2. Lively; vigorous.

The orations of Demosthenes are *animated* and even inflamed with metaphors, some of which are so bold as even to entail upon him the censure of the critics.—*Goldsmith, Essays*, 13.

On the report there was an *animated* debate.—*Macaulay, History of England*, v. 73.

Animosity. s. [Fr. *animosité*.] Resentment, attended with irritation.

They were sure to bring passion, *animosity*, and malice enough of their own, what evidence soever they had from others.—*Lord Clarendon*.

No religious sect ever carried their aversions for each other to greater heights than our state parties have done: who, the more to inflame their passions, have mixed religious and civil *animosities* together; borrowing one of their appellations from the church.—*Swift*.

His *animosities* were numerous and bitter. He hated Frenchmen and Italians, Scotchmen and Irishmen, Papists and Presbyterians, Independents and Baptists, Quakers and Jews. Towards London and Londoners he felt an aversion which more than once produced important political effects.—*Macaulay, History of England*, ch. iii.

Up to the ankles, legs, and knees. *Prior*.

Ankle-bone. s. [Probably two words, rather than a compound.] Bone of ankle.

The distinct single piece which forms the upper end of the *ankle-bone* in the young bird represents the tarsal segment, and rests, not on a single diaphysis, but on the still separate proximal ends of the three metatarsals.—*Owen, Lectures on Comparative Anatomy*, lect. ii.

Ankled. adj. Furnished with ankles.

Say he be black, he's of a very good pitch,
Well *ankled*, two good confident calves.

This is the sum of what passed in three years against the Danes returning out of France, set down so periphrastically by the Saxon *annalist*.—*Milton, History of England*, b. v.

Their own *annalist* has given the same title to that of Symmian.—*Bishop Atterbury*.

The native historians of Rome who were prior to Sallust, Dionysius, and Livy, have been sometimes grouped together under the common designation of *annalists*. Lewis, Enquiry into the Credibility of the early Roman History*, i. 90.

Then the light and glory
More rev'rend grows. *G. Herbert*.

[Commonly referred to A.S. *anelan*, *onelan*, to kindle, set on fire, light up; from *aelan*, burn. But the A.S. is a very unusual source for the designation of a process in any of the fine arts; and I think it more likely that the term was derived from the Ital. *niello*, Lat. *niellum*, a kind of black enamel on gold or silver. To ornament in this manner became in Fr. *nieller* or *néeler*, which seems loosely to have been applied to enamelling in general.—*Wadgwood, Dictionary of English Etymology*.]

Annex. v. a. [Fr. *annexer*.] Unite to something previously having a separate and independent existence of sufficient magnitude to make the thing annexed of secondary import.

Concerning fate or destiny, the opinions of those learned men that have written thereof may be safely received, had they not thereunto *annexed* and fastened an inevitable necessity, and made it more general and universally powerful than it is.—*Sir W. Raleigh*.

Nations will decline so low
From virtue, which is reason, that no wrong,
But justice, and some fatal curse *annex'd*,
Deprives them of their outward liberty.

I mean not the authority which is *annexed* to your office; I speak of that only which is inborn and inherent to your person.—*Dryden*.

These high pretensions gave scandal to Protestants as well as to Catholics; and the scandal was greatly increased when the supremacy, which Mary had resigned back to the Pope, was again *annexed* to the crown on the accession of Elizabeth.—*Macaulay, History of England*, ch. ii.

Annex. s. Thing annexed.

To which, by way of application, I add these two *annexes* of holy prayer.—*Jeremy Taylor, Sermons*, p. 14.

Annexary. s. Addition; supernumerary. Rare.

The lay people of all sorts, both men and women, both single and married, do inroll themselves into one or more of these societies, approaching so much nearer to the state of the clergy; unto which sundry of them are no other than *annexaries* and appurtenances.—*Sir E. Sandys, State of Religion*.

Annexation. s. Conjunction; union; addition; act, or practice, of adding or uniting.

For the patrimonies of both crowns, I see no question will arise; except your majesty would be pleased to make one compounded *annexation*, for an inseparable patrimony to the crown, out of the lands of both nations.—*Bacon, On the Union of England and Scotland*.

If we can return to that charity and peaceable mindedness which Christ so vehemently recommended to us, we have his own promise, that the whole body will be full of light, Matt. vi., that all other christian virtues will, by way of concomitance or *annexation*, attend them.—*Hammond*.

How *annexations* of benefices first came into the church, whether by the prince's authority, or the pope's license, is a very great dispute.—*Ayliffe, Parergon Juris Canonici*.

If Edward of England meditated the reduction of the whole British islands under one monarchy, . . . Philip the Fair coveted with no less eager ambition the continental territories of England. He too

aspired to be King of all France. . . He had succeeded in incorporating the wreck of the kingdom of Arles with his own realm. He had laid the train for the *annexation* of Burgundy: his son was affianced to the daughter and heiress of Otto V. Edward, however, had given no cause for aggression.—*Milman, History of Latin Christianity*, b. xi. ch. viii.

Annexionist. s. One who favours annexation.

The unconditional *annexionists*, suspicious of the issue, and fearing lest an assembly elected under such auspices might prove the theatre of republican intrigues, now urged immediate appeal to the people so-called autonomists, more justly called constitutionalists, were not to be shaken in their opinion that the Parliament alone could legally dispose of the throne, &c.—*Westminster Review*, April 1861, p. 346.

Annexion. s. Act of annexing; addition.

It is necessary to engage the fears of men, by the *annexion* of such penalties as will overbalance temporal pleasure.—*Rogers*.

When it falls,
Each small *annexment*, petty consequence,
Attends the boisterous ruin. *Shakespeare, Hamlet*, iii. 3.

Annihilable. adj. Capable of being annihilated.

Is not this contradicting himself, for a man to affirm (as Cartes does in all his writings) that the world was created by God and depends on him, and yet at the same time to declare that it implies as plain a contradiction to suppose any part of matter *annihilable* by the power of God, as to suppose that two and three should not make five.—*Clarke, Evidence of natural and revealed Religion*, preface.

Annihilate. v. a. [Lat. *ad* = to, *nihil* = nothing.] Reduce to nothing; put out of existence; destroy.

It is impossible for anybody to be utterly *annihilated*: but that as it was the work of the omnipotency of God to make somewhat of nothing, so it requirith the like omnipotency to turn somewhat into nothing.—*Bacon*.

What is then become of those immense sales of paper, which must needs have been employed in such numbers of books? Can these also be wholly *annihilated*?—*Swift, Tale of a Tub*, dedication.

Any of which, by the smallest transposal or misapplication, is utterly *annihilated*.—*Ibid.* preface.

Annihilation. s. Act of reducing to nothing; state of being reduced to nothing.

God hath his influence into the very essence of things, without which their utter *annihilation* could not choose but follow.—*Hooker*.

That knowledge, which as spirits we obtain,

Annihilation were to lose heav'n more;
We are not quite exil'd where thought can soar. *Dryden*.

And on their sacred anniversary decreed To stamp their image on the promis'd seed.

Who shall presume to mourn thee, Donne, unless He could his tears in thy expressions dress,

How fitly the Saracens are resembled to locusts, or scorpion-tail'd locusts, in Apocal. ix. 3, 5, 10 (as the like is also said of the Turks, ver. 19), Mr. Mede hath with far more clearness shewn, than the *annotationists* of the new way have discovered.—*Worthington, Miscellanies, p. 58.*

A penal statute is virtually *annulled* if the penalties which it imposes are regularly remitted as often as they are incurred. Annúlose. *adj.* In Zoology. Belonging to the sub-kingdom containing the insects and worms.

The churchmen, at the time of the Revolution, justified their conduct by all those profligate sophisms which are called Jesuitical, and which are commonly reckoned among the peculiar sins of Popery, but which, in fact, are every where the *anodynes* employed by minds rather subtle than strong, to quiet those internal twinges which they cannot but feel and which they will not obey.—*Macaulay, Essays*, p. 91.

The negroes of Nubia, with their bodies painted half white, half vermilion, and partly covered with skins of lions or leopards, their bows four cubits long, and small arrows, in which a sharp stone supplied the place of steel, their spears pointed with the horn of the *antelope*, and their knotty clubs, were among the most prominent figures in the motley host.—*Bishop Thirlwall, History of Greece*, ch. xv.

It may be proper to mention that the *anthems* which on Easter Sunday morning are appointed to be used instead of the Venite, are so called from their being short sentences; the word *anthems* in this instance, by a peculiar usage, signifying 'texts,' and not having reference to the way in which they should be sung or said.—*Finlayson, Collection of Anthems sung in the Dublin Cathedrals.*

Anthropomorphite. *s.* [ἀνθρωπομόρφος = man-shaped.] One who attributes a human form to the Deity; one of a sect which did so.

Many Englishmen who had no scruple about *antiphonies* and genuflections, altars and surplices, saw with pleasure the progress of a rebellion which seemed likely to confound the arbitrary projects of the court, and to make the calling of a parliament necessary.—*Macaulay, History of England*, ch. i. 98.

Antiphrasis. *s.* [Gr. *avri* = against, *φράσις* = form of speech.] Use of words in a sense opposite to their proper meaning.

Antiphrastically. *adv.* In the manner of an antiphrasis.

Antipodal. *s.* One who dwells at the antipodes.

The Americans are *antipodals* unto the Indians.—*Sir T. Browne*.

Antipodes. *s.* [Gr. *avri* = against, *πόδες* = feet.—The *s* in this word, which is inflectional in the original Greek, must be looked upon as radical in English; though such a word as *antipod* or *antipode* exists.]

The strict meaning of the word is *opposite foot*, or *opposite feet*: and, as the feet of persons at the two extremities of a straight line drawn through the centre of the earth are opposite, this opposition is all that, in the first instance, the word conveys. It may apply to a single *foot*, or to two; to the feet of a single individual, or of many; whence the possibility of such a form as *antipod* (not *antipode*); for it is clear that if we were speaking of two one-legged men, one in England and the other in New Zealand, we might say that the single foot of the first was the *antipod* to the single foot of the second, or vice versa.

However, the primary sense of the word along with the singular number is rare. What the word usually means is, by a natural extension, (1) the men to whom the opposite feet belong, and (2) the country which they inhabit.

In the former case, the necessity of speaking of a single individual may occur, in which case a singular form is required. It is, however, unattainable, inasmuch as *antipod* means *opposite foot*.

The form, then, of the following extracts is exceptional:

'My soul is an *antipode*, and treads opposite to the present world.'—*Stafford, Niobe, To the Reader*.

'In tale or history your beggar is ever the just *antipode* to your king.'—*C. Lamb, Essays of Elia, A Complaint of the Decay of Beggars*.

The difficulty of getting at a singular number for this word has just been suggested; and it is now added that even *antipod*, if there were no other objections to it, would be an exceptional form: the Greek nominative singular being *ἀντίπους*. This makes *antipodal* a convenient, though not a common, word. A similar difficulty, attended with an additional complication, occurs in the word *aborigines*. It has no good form for the singular number, a fact which forces us upon a *boriginal*.]

1. Those people who, living on the other side of the globe, have their feet directly opposite to ours; their country.

2. Diametrical opposition.

suggest the possibility of the remaining
ninety-nine being other than brave. If, on
the other hand, we say *any one of them is*
brave, we convey the statement that *all are*
brave. This is because *any*, meaning *one*,
means something else besides. It means not
only *one*, but *one indifferently*. To say that
out of a body of men any one whom we may
choose will be brave, is to say that *all* are
brave; since though we can only choose
a single individual, we may choose one as
well as another. Hence, whoever is chosen
will, as far as what we predicate of him is
concerned, represent all. In other words
besides the one under notice, this element
of indifference plays an important and a
like part. *Either* means *one out of two*;
but as it means this *indifferently*, it has the
power of both. Thus, *on either side*, means
on both sides. See also *Each*. In strict
syntax such words when they stand alone
require their verb to be singular.

The power of *all* or *every* thus attached
to the word *any* is permanently attached to
it only so long as it is positive, or affirma-
tive. When preceded by a negative, it may
simply mean *one*. If, on going out, I
leave word that *any one who calls must be*
asked to wait till my return, I may find, on
getting back, twenty men waiting for me.
My order, though it admits no one in par-
ticular, excludes no one in particular. If,
however, I say *not any one who calls is to*
be admitted, there is an ambiguity, inas-
much as *not any* may mean *no one*, or it
may mean *not every one*.

Any combined with *one* and *thing* gives
us two words or a compound according to
the sense. In using such a combination as
anything, we have one of two meanings.
When the accent lies on *thing*, the notion
of the indifference in the way of selection
is subordinate to the notion of the in-
difference in respect to the object selected.
Any thing means a *thing* as opposed to a
person. Where the accent lies on *any*, the
notion of indifference in the way of selec-
tion predominates; which particular object
is meant being indifferent. All that is
insisted on is, that whoever or whatever
may be the individual out of many which is
taken, he or it will serve the purpose.

When the accent is on the last syllable,
the result is two words; when on the first,
a compound.

The same applies to *any + one*. It means
one, as opposed to *more than one*; and that

APAC

one chosen at random, rather than by selec-
tion. *Any one* expresses the first; *anyone*,
the second of these meanings.

For the derivation of the element *one*,
i.e. the question how far is it the numeral
one (= *unus*), or the indeterminate pronoun
one (= the French *on*), see *One*.

The result of the combination of *any* with
another word is either a pronoun or an
adverb; this being determined by the na-
ture of the second element; *any* itself be-
ing always an adjective with an adverbial
power, expressive of indifference.

The chief pronominal combinations are
anyone, anybody, anyman, anything.

The chief adverbs are *anywhere, any-
whither, anywhen* (rare and colloquial, if
not provincial or vulgar), *anyhow*.

Anywise, though the second element is
a substantive, is adverbial; having exactly
the construction of *anyhow*.

Anybody, though the second element is
also a substantive, is, like *anyone*, pro-
nominal. At least it is in the same cate-
gory with *anyone*.]

1. Every; whoever he be; whatever it be:

Sacred Classics, ii. 224.

Aorta, *s.* [Lat. *aorta*; from Gr. *ἀόρη*.]
Great artery which rises immediately out
of the left ventricle of the heart, opposite
to the third dorsal vertebra.

The left ventricle of the heart doth, in its diastole,
receive that blood that is brought unto it by the
arteria venosa of the lungs; and having retained it
a little, it doth, in its systole, conveniently pass a
due proportion thereof into the *aorta*. — *Smith, Por-
trait of Old Age*, p. 244.

Aortic, *adj.* Belonging to, of the nature of,
or constituted by, the *Aorta*.

The four veins on each side, which are analogous
to the pulmonary veins in man, unite to form the
aortic circle which encompasses the basi-sphenoid.
The current of arterialed blood flows forward at
the fore-part of this circle into the hyo-opercular
and orbito-nasal arteries; but the main streams are
directed backwards, and converge to the *aortic*
trunk. — *Owen, Lectures on Comparative Anatomy*,
lect. x.

Apáce, *adv.* [if the *a* have grown out of
the A.S. *on*, which it generally does, this is
a hybrid word, since the second element is
the Fr. *pas* = Lat. *passus* = step. But the
a may be the French *a*, or it may have
arisen out of a confusion of the two. It
implies not only a *step* but a *quick one*.]
Quickly; speedily.

Or when the flying libbard she did chace,
She could them nimbly move, and after fly *apace*.

Spenser, Faerie Queen.

could not be reproached with *apathy*. — *Finlay, His-
tory of the Greek Revolution*, i. 126.

I confess that I do feel the differences of mankind,
national or individual, to an unhealthy excess. I
can look with no indifferent eye upon things or per-
sons. Whatever is, is to me a matter of taste or
distaste; or when once it becomes indifferent, it
begins to be disrelishing. I am, in plainer words, a
bundle of prejudices—made up of likings and dis-
likings—the veriest thrall to sympathies, *apathies*,
antipathies. — *C. Lamb, Essays of Elia*, p. 349.

Celestial beings, when of late they saw
A mortal man unfold all Nature's law,

By their faire handling, put into Malbecco's cape.
Spenser, *Faerie Queen*, iii. 9, 31.

Apebearer. s. Strolling fool, or buffoon, who bore an ape on his shoulder. See *Ape*.

Apert. adj. Open ; without disguise ; evident. *Obsolete*.

Apheïon. s. pl. apheïa. [Gr. *ἀπό* = from, *ἥλιος* = the sun.] That part of the orbit of a planet in which it is at the point remotest from the sun.

Apheis. s. pl. apheides. [Lat.] Hemipterous insects of genus so-called ; plant-louse.

The larval *apheides*, however, unequivocally propagate, and so frequently, as quite to parallel the condition of the procreant larve of the medusa-producing polypes ; and the analogy is both true and close of the winged male and oviparous female *apheides* to the locomotive male and female medusa and to the male and female modified leaf-individuals of plants.—*Owen*, *Lectures on Comparative Anatomy*, lect. ix.

There is, again, in insects, a fourth modification of the individual, in relation to the sexual function. I allude to that remarkable state of the *apheis*, which, like the working bee, is an arrested stage of the female, constituting the larviparous individual, but which propagates by a kind of internal gemmation, without sexual concourse in her own person. She possesses, however, the female organs ; but, contrariwise to the working bee, the external and accessory parts of the apparatus are wanting, whilst the more essential organs are extremely active.—*Ibid.* lect. xviii.

Aphorism. s. [Gr. *ἀφορισμός*.] Maxim ; precept contracted into a short sentence.

I shall at present consider the *aphorism*, that a man of religion and virtue is a more useful, and consequently a more valuable member of a community.—*Rogers*.

That in reality has no qualities has no existence in thought.—it is a logical nonentity : hence e converso, the scholastic *aphorism*, 'nomenia nulla sunt predicata'.—*Sir W. Hamilton*, *Logic*, i. 77.

Yes, history will prove *Shakespeare's aphorism*, 'that there is magic in a name' especially for the working of evil.—*Agnes Strickland*, *Lives of the Queens of England*, *Henrietta Maria*.

Putting all these points together, we see how much wider was the intellectual range of tragedy, and how considerable is the mental progress which it betokens, as compared with the lyric and gnomic poetry, or with the seven wise men and their authoritative *aphorisms*, which formed the glory, and marked the limit of the preceding century.—*Grote*, *History of Greece*, pt. ii. ch. lxvii.

Aphoriser. s. Writer or relater of aphorisms. *Rare*.

We may infallibly assure ourselves, that it will as well agree with monarchy, though all the tribe of *aphorisers* and politicians would persuade us

there be secret and mysterious reasons against it.—*Milton*, *Of Reformation in England*, b. ii.

Aphorismic. adj. After the manner of an aphorism.

The style of Junius is a sort of metre, the law of which is a balance of thesis and antithesis. When he gets out of this *aphorismic* metre into a sentence of five or six lines long, nothing can exceed the slovenliness of the English. Horne Tooke and a long sentence seem the only two antagonists that were too much for him. Still the antithesis of Junius is a real antithesis of images or thought, but the antithesis of Johnson is rarely more than verbal.—*Coleridge*, *Table Talk*.

Aphorist. s. Writer of aphorisms.

He took this occasion of farther clearing and justifying what he had written against the *aphorist*.—*Nelson*, *Life of Bishop Bull*, p. 246.

Apiarist. s. One who studies the nature of, or breeds, bees.

Aristotle's sentiments seem to have been much more correct, and not very wide of what some of our best modern *apiarists* have advanced.—*Kirby and Spence*, ii. 124. (Ord MS.)

Apiary. s. [Lat. *apicrium* = place for bees.] Place where bees are kept.

Those who are skilled in bees, when they see a foreign swarm approaching to plunder their hives, have a trick to divert them into some neighbouring *apiary*, there to make what havoc they please.—*Swift*.

Apical. adj. Relating to, or constituting, an Apex.

In the outer layer are developed distinct, firm, and opaque cartilages, the neuropophyses, which, in the young sturgeon, are two superimposed pieces on each side, the basal portion bounding the neural canal, the *apical* portion the parallel canal filled by fibrous elastic ligament and adipose tissue : above this is the single cartilaginous neural spine.—*Owen*, *Lectures on Comparative Anatomy*, lect. iii.

Gloomy sits the queen ;
Till happy chance reverts the cruel scene ;
And *apish* folly, with her wild resort
Of wit and jest, disturbs the solemn court. *Prior*.

Apishly. adv. In an apish manner ; foppishly ; conceitedly.

So *apishly* romanizing, that the word of command still was set down in Latin.—*Milton*, *Areopagitica*. Sin is generally so *apishly* crafty, as to hide itself under the colours and masks of goodness and honesty.—*Jeremy Taylor*, *Artificial Handsomeness*, p. 15.

the incubus as soon as the opportune hour should
arrive.—*Sir F. Palgrave, History of Normandy and
of England*, ii. 187.

With this throne of the glory of the Father com-
pare the throne of the Son of God, as seen in the
apocalypse.—*T. Burnet, Theory of the Earth*.

2. Revelation; disclosure.

O for that warning voice which he who saw
Th' *apocalypse* heard cry in heav'n aloud.

Milton, Paradise Lost, iv. 1.

A company of giddy heads will take upon them to
define how many shall be saved, and who damned,
in a parish; where they shall sit in heaven; inter-
pret *apocalypses*, and those hidden mysteries to
private persons, times, and places, as their own
spirit informs them!—*Burton, Anatomy of Melan-
choly*, p. 677.

Nor do I think any of the learned will dispute
that famous treatise to be a complete body of civil
knowledge, and the revelation or rather the *apoca-
lypse* of all state arcana.—*Swift, Tale of a Tub*, in-
trod.

Apocalýptic. *adj.* Pertaining to an apo-

Apocalýptical. *adj.* Same as Apoca-

of this *apocalýptical* theatre, we should find it a
representation of the majesty of our Saviour.—
T. Burnet, Theory of the Earth.

They are light and giddy-headed, much symbol-
izing in spirit with our *apocalýptical* zealots and
fiery interpreters of Daniel and other prophets,
whereby they often soothe or rather fool themselves
into some illumination, which really proves but
some egregious dotage.—*Howell, Letters*, i. 6.

Apócrypha. *s.* [Gr. ἀπόκρυφα.] Nonca-
nonical scriptures.

We hold not the *apocrypha* for sacred, as we do
the holy scripture, but for human compositions.—
Hooker.

Apocryphal. *adj.*

1. Not canonical; of uncertain authority.

Jerom, who saith, that all writings not canonical
are *apocryphal*, uses not the title *apocryphal* as the
rest of the fathers ordinarily have done, whose cus-
tom is so to name, for the most part, only such as
might not publicly be read or divulged.—*Hooker*.

2. Contained in the apocrypha.

To speak of her in the words of the *apocryphal*
writers, wisdom is glorious, and never fadeth away.—
Addison.

3. Of doubtful credit.

a. Of things.

Many *apocryphal* pamphlets (let him who likes
them call them books), have been of late years writ
and licensed, which endeavour to confute the esta-
blished and known doctrine of our church, and all
reformed churches in Europe; and maintain posi-
tions which are evidently Socinian, Popish, or Pei-
gian.—*Bishop Barlow, Remains*, p. 54.

All your lights and calls,
Are but *apocryphal* and false.

Butler, Hudibras, iii. 2.

b. Of persons.

Who shall take your word?

A whoreson, upstart, *apocryphal* captain?

B. Jonson, Alchemist.

Apócryphal. *s.* (there is no reason why it
should not be used in the singular number;
in which case it is equivalent to *apocryphon*,
the Greek singular, though not natural-

ized, in English, of Apocrypha.) Same
as Apocrypha.

Nicephorus and Anastasius, upon this only ac-
count (as Usher thinks), because they were inter-
polated and corrupted, did rank these epistles in
the number of *apocryphals*.—*J. Hammer, View of
Ecclesiastical Antiquity*, p. 419.

scripture proof and authentic tradition for their
image-worship, betook themselves to certain *apo-
cryphical* and ridiculous stories, as Charles the great
observed.—*Bishop Bull, Corruptions of the Church
of Rome*.

Apódal. *adj.* [Gr. ἀπόδω, -δος = without
foot.] Destitute of actual feet, their equi-
valents, or their analogues: (used in *Zoo-
logy* with the latter sense).

Such [fishes] as are entirely destitute of ventral
fins are termed Pisces apodes, being, as it were,
apodal or footless fishes.—*Shaw, Zoology*, ch. iv. (Ord
MS.)

The *apodal* entozoiform larvæ, in which the seg-
ments of the body are obscurely defined, as those of
most Diptera, Hymenoptera, and of some Coleoptera
with very rudimentary feet, have a simple ventral
nervous chord, almost as devoid of ganglionic en-
largements as in the Nematoidea and Lulidae: it is,
however, usually relatively shorter, failing to reach
the posterior extremity of the body, and the fine
nerves pass off on each side and radiate from the
extremity.—*Owen, Lectures on Comparative Ana-
tomy*, lect. xvi.

Apodictic. *adj.* [Gr. ἀποδεικτικός.] De-
monstrative; in the way of demonstra-
tion.

Logic is not only a science, but a demonstrative
or *apodictic* science.—*Sir W. Hamilton, Logic*, i. 12.
Thus it appears that Aristotle possessed no single
term by which to designate the general science of
which he was the principal author and finisher.
Analytic and *apodictic*, with topic (equivalent to
dialectic, and including sophistic), were so many
special names by which he denoted particular parts
or particular applications of logic.—*Ibid.* i. 8.

The argumentation is from a similitude, there-
fore not *apodictic*, or of evident demonstration.—
Robinson, Endoxa, p. 23.

Apodictical. *adj.* Same as Apodictic.
Rare.

Holding an *apodictical* knowledge, and an assured
knowledge of it; verily, to persuade their apprehen-
sions otherwise were to make an Euclid believe that
there were more than one centre in a circle.—*Sir T.
Browne, Vulgar Errors*.

We can say all at the number three; therefore the
world is perfect. Tobit went, and his dog followed
him; therefore there is a world in the moon, were
an argument as *apodictical*.—*Glanville*.

Apodictically. *adv.* Demonstratively.

Mr. Mede's synchronisms are *apodictically* true
to any one that has but a competency of wit and
patience to peruse them.—*Dr. H. More, Mystery of
Godliness*, p. 175.

Apodixis. *s.* Demonstration.

This might taste of a desperate will, if he had not
afterwards given an *apodixis* in the battle, upon
what platform he had projected and raised that hope.
—*Sir G. Buck, History of King Richard III.* p. 60.

Apódosis. *s.* [Gr.] In *Rhetoric*. Appli-
cation or latter part of a similitude; con-
clusion of a proposition.

The apostle puts lords, and that for the honour of
Christ, of whom he was to infer εἰς κύριος; the name
of Christ being not to be polluted with the appella-
tion of an idol; for his *apodosis* must have been
otherwise εἰς δαίμων.—*Mede, Apostasy of the later
Times*, p. 13.

Apodous. *adj.* Having no feet: (a less ge-
neral term than Apodal.)

Amongst larvæ there are two classes of movers—
apodous larvæ, or those that move without legs;

legs.—*Kirby and Spence, Introduction to Entomo-
logy*, ii. 272. (Ord MS.)

dytérion*, Mr. W. Rogers, one of his [King James
II.] retinue, said, Sir, this convocation-house is the
place wherein they confer degrees.—*Life of A. Wood*,
p. 364.

Apógee. *s.* [Gr. ἀπό = from, γῆ = earth.]
Point in its orbit at which any heavenly
body is at its maximum distance from the
earth.

The sun in his *apogee* is distant from the centre

of the earth 1550 semi-diameters of the earth, but in
his perigee 1446.—*Dr. H. More, Astr. Prop. Notes
to his Song of the Soul*, p. 379.

The ancients, who regarded the earth as being the
centre of our system, naturally paid the most atten-
tion to these points; but the moderns have changed
them for aphelion and perihelion, so that the *apogee*
of the sun is now the aphelion of the earth, and the
perihelion of the sun the same as the perigee of the
earth.—*Encyclopædia Metaphisica*.

When Arachel found by observation the *apogee*
of the sun to be situated too far back, he ventured
to correct Ptolemy's statement of its motion. But
when Aboul-Wefa had really discovered the varia-
tion of the moon's motion, he did not express it by
means of an epicycle. If he had done so, he would
have made it unnecessary for Tycho Brahe at a later
period to make the same discovery.—*Whewell, His-
tory of Scientific Ideas*, b. i. ch. viii.

Apógeum. *s.* Same as Apogee. *Obsolete.*

The sun in his *apogeeon* placed,
And when it moveth next, must needs descend.

Fairfax.

It is yet not agreed in what time, precisely, the
apogeeum absolveth one degree.—*Sir T. Browne,
Vulgar Errors*.

Theologica*, i. 104; 1752.

the whole body of the discourse, being an *apolo-
getical* defence of the power and providence of God,
his wisdom, his truth, his justice, his goodness and
mercy.—*Hakewill, Apology*, preface.

If, by looking on what is past, thou hast deserved
that name [of reader], I am willing thou shouldst
yet know more by that which follows, an *apologetical*
dialogue.—*B. Jonson, Poetaster*.

To begin an apology for these animadversions,
which I write against the remonstrant in defence of
Smectymnus; since the preface, which was pur-
posely set before them, is not thought *apologetical*
enough; it will be best to acquaint ye, readers, before
other things, what the meaning was to write them
in that manner which I did.—*Milton, Apology for
Smectymnus*.

Twelve yeares agoe I wrote a little *apologetical*
letter for the marriage of persons ecclesiasticale.—
Bishop Hall, Honour of married Clergy. (Ord MS.)

Francis Palgrave, History of England and Nor-
mandy*, i. 276.

These princely endowments and charities have
been adduced by the *apologists* of Richard as proofs
that he was innately and sincerely pious.—*J. H.
Jesse, Memoirs of King Richard III.* ch. vi.

This more plainly appears from the writings of
the Christian *apologists* of those times against the
Heathens objecting to them.—*Bishop Bull, Corrup-
tions of the Church of Rome*.

Apologize. *v. n.* Plead in favour of any
person or thing.

It will be much more reasonable to reform than
apologize or rhetoricate; and therefore it imports
those who dwell secure to look about them.—*Dr.
H. More, Decay of Christian Piety*.

With for.

I ought to *apologize* for my indiscretion in the
whole undertaking.—*Archbishop Wake, Preparation
for Death*.

The translator needs not *apologize* for his choice
of this piece, which was made in his childhood.—

for his infraction of the laws.—*Macaulay, History
of England*, ch. i.

lery; others for *apologues* and apposite diverting
stories.—*Locke*.

Ápologuer. *s.* Fabler. *Rare.*

A mouse, saith an *apologuer* [apologuer] was

brought up in a chest, there fed with fragments of bread and cheese.—*Burton, Anatomy of Melancholy*, p. 559.

Why may not a sober *apologuer* [apologuer], be permitted, who brings his burthen to cool the conflagrations of fiery wits?—*Waterhouse, Apology for Learning*, p. 238: 1653.

Apology. s. [Gr. ἀπολογία.]

1. Vindication in the way of extenuation or excuse.

In her face excuse
Came prologue, and *apology* too prompt;
Which with bland words at will she thus address'd.
Milton, Paradise Lost, ix. 854.

With *for*.

It is not my intention to make an *apology* for my poem: some will think it needs no excuse, and others will receive none.—*Dryden*.

I shall neither trouble the reader nor myself with any *apology* for publishing of these sermons; for if they be, in any measure, truly serviceable to the end for which they are designed, I do not see what *apology* is necessary; and if they be not so, I am sure none can be sufficient.—*Archbishop Tillotson*.

2. Defence: (generally with special reference to Plato's *Apology*, i. e. Defence of Socrates).

Bishop Watson's '*Apology* for the Bible,' is a good book with a bad title. No *apology*, in the common meaning of the term, was wanted.—*Robert Hall*.

Apophthegm. s. [Gr. ἀποφθεγμα.] Sententious saying; maxim.

We may magnify the *apophthegms*, or reputed replies of wisdom, whereof many are to be seen in *Laertius* and *Lyosthenes*.—*Sir T. Browne, Vulgar Errors*.

By frequent conversing with him, and scattering short *apophthegms*, and little pleasant stories, and making useful applications of them, his son was, in his infancy, taught to abhor vanity and vice as monsters.—*I. Walton, Life of Bishop Sanderson*.

I had a mind to collect and digest such observations and *apophthegms* as tend to the proof of that great assertion, All is vanity.—*Prior*.

The Jews were guided by the proverbs of their wise king, and a moral *apophthegm* was attributed to each of the seven sages of Greece.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vi.

Apophthegmatic. adj. In the manner of an *apophthegm*; dealing in *apophthegms*.

Apoplectic. adj. Relating to an apoplexy.

A lady was seized with an *apoplectic* fit, which afterwards terminated in some kind of lethargy.—*Wiseman, Surgery*.

By the older writers an *apoplectic* fit had always been considered to be the effect of some mechanical compression upon the brain; but pathologists were long before they suspected that the cause of such compression was commonly to be found in a heart whose functions were disordered. . . . Such symptoms, I think it will appear, must necessarily be of two kinds; one caused by changes in the systemic, and the other by changes in the pulmonary heart; and this view of the nature of the different kinds of *apoplectic* fits, simple as it may appear, yet enables a satisfactory explanation to be given of the various and apparently incongruous symptoms of

these diseases which have been classed together by nosologists, and will also account for the inconsistent subdivisions and number of species which they have enumerated.—*Wardrop, Diseases of the Heart*.

Apoplectical. adj. Same as *Apoplectic*. *Rare*.

We meet with the same complaints of gravity in living bodies, when the faculty locomotive seems abolished; as may be observed in supporting persons inebriated, *apoplectical*, or in lithopneumies and swoonings.—*Sir T. Browne, Vulgar Errors*.

Preternatural sleep and preternatural watching are altogether inconsistent; and therefore an *apoplex* and a frenzy are in no wise incident to the same person at the same time.—*Smith, Portrait of Old Age*, p. 131: 1668.

An *apoplex* falls under a double consideration: either as it is a disease, or as it is a symptom.—*Ibid.* p. 223.

Apostate. adj. False; traitorous; rebellious.

Easily the proud attempt
Of spirits *apostate*, and their counsels vain,

They now generally *apostatize* from their own cause, belye their own conscience.—*Dean Martin, Letters*, p. 5.

None revolt from the faith, because they must not look upon a woman to lust after her, but because they are restrained from the perpetration of their lusts. If wanton glances and libidinous thoughts had been permitted by the gospel, they would have *apostatized* nevertheless.—*Bentley*.

Apostemate. v. a. Become an aposteme *Rare*.

I am far from pretending infallibility: that would be to erect myself into an *apostle*: a presumption in any one that cannot confirm what he says by miracles.—*Locke*.

We know but a small part of the notion of an *apostle*, by knowing barely that he is sent forth.—*Watts, Logic*.

Subscriptions were easily collected, and agents called *Apostles* were sent amongst the orthodox population of Turkey to preach hatred to the Turks and devotion to the Czar of Russia. The supreme direction of the society was unfortunately always in

the hands of incapable men, and the *Apostles* were often so ill-selected that the members who resided in Greece refused to intrust them with large sums of money, and feared to confide their lives and fortunes to their prudence.—*Finlay, History of the Greek Revolution*.

Till th' *apostolic* hero wakes.

Bishop Patrick, Poems, &c. p. 25: 1719.

Such infringement is a violation of the conditions of the compact with the State, and therefore an offence against the State, quite apart from the consideration that it is also an offence against the *apostolic* precept of order as interpreted and applied in the existing arrangements.—*Gladstone, The State in its Relations with the Church*, ch. viii. § 248.

Apostolical. adj. Same as *Apostolic*.

Apostolically. adv. In the manner of the apostles.

2. In *Grammar*. Mark (') used to indicate the omission of a letter or letters in the contraction of a word (as *tho'* for *though*; *rep'* for *reputation*); and also as a sign of the possessive case, singular or plural. In the former instance it precedes, in the latter, follows the final *s*: as the *ship's* sails = the sails of a *single ship*; but the *ships'* sails = the sails of more ships than one. In the plural it is no mark of anything omitted, as the A.S. possessive was *scipa*. In the singular it stands for the *e*, as of the fuller form *scipes*. The notion that it stands for the possessive pronoun *his* (in favour of which the expression for *Jesus Christ his sake* is often quoted) is wholly wrong. In the first place it will not account for combinations like the *Queen's* realm, or the *children's* bread; in the second, it leaves the *s* in *his* itself unexplained; in the third, the *s* is the *s* in *patris*, πατρός, &c.

Many laudable attempts have been made, by abbreviating words with *apostrophes*; and by lopping polysyllables, leaving one or two syllables at most.—*Swift*.

Apotelesmatic. adj. With a view to final causes. *Rare*.

It will easily be supposed that when this *apotelesmatic*, or judicial, astrology, obtained firm possession of men's minds, it would be pursued into innumerable subtle distinctions and extravagant conceits; and the more so, as experience could offer little or no check to such exercises of fancy and subtlety.—*Whewell, History of the Inductive Sciences*, b. iv. ch. iii.

Apotheca. s. [Lat. *apotheca* = shop.] Apothecary's shop.

He [the master apothecary] shall ever now and then visit the *apotheca*, to cast out thereof all decayed drugs and compositions.—*Sir W. Petty, Advance of Learning*, p. 16.

Th' apothecary train is wholly blind. *Dryden*.

Apothecary. adj. [?] Of a certain colour so called.

I had for some hours a specimen of Rossia Jacobi alive: when lying quietly at the bottom of the basin it was sometimes almost white; but on passing my hand over it, became instantly of a bright liver-red, or rather, an apothecary rose-colour. It displayed various degrees of this colour.—*Bale, in Forbes and Hanley's British Mollusca*.
